Paterson's Wire Edged Ready Roofing

has successfully stood the test of Canada's variable climate for over twenty years, and is the only popular substitute for shingles.

We are advertising the above Roofing extensively in the "Farmers' Magazines" and in all cases we ask prospective customers to order our goods from their local Hardware Merchants.

There will be a very large quantity of our Ready Roofing sold in the future, and you can't blame us if you don't get your share of that trade.

Blue Ribbon is no doubt the Queen of Binder Twine. It runs six hundred and fifty feet to the pound, and is manufactured from most select Manila Fibre. Six hundred and fifty foot Twine is the only Twine manufactured entirely from Manila Fibre. Dealers should beware of so-called "Manila" Twines which are advertised to measure less than 650 feet to the pound. They are mixed Twines.

TO DEALERS AND USERS

—OF—

Savage Arms and Ammunition

Our attention has been called to a circular issued by the Marlin Fire Arms Co., with reference to a claim of infringement of patents made against the Savage 22 Cal. Rifle. It is a significant fact that we have not been sued for the alleged infringement, but suits have been brought against two of our customers in New Haven, Conn. We have already assumed all responsibility of these suits and are able to take care of them and intend to do so. We have the services of able counsel and experts, who assure us that our 22 Cal. Rifle is not an infringement of the Marlin patents, and, indeed, this must be apparent to all who are familiar with, or will take the trouble to compare the Savage and Marlin Rifles.

Marlin was not, by any means, the first to produce or make a take-down rifle. Our rifle is not like Marlin's we are pleased to say.

We assure you that we are able to, and will protect all dealers and users of the Savage 22 Cal. Rifles against all claims of infringement. We shall continue to maintain the high standard of excellence of our arms and rely, as we have heretofore, on the trade and public to recognize real merit.

Yours very truly,

SAVAGE ARMS COMPANY.

KEMP MANUFACTURING CO., TORONTO, CANADA.

The Manufacture of Varnish and Japans.

The Process Employed by Berry Bros., Walkerville and Detroit.

ALL merchants who sell paints, oils, varnishes, etc., as well as the painters who use them, should ever take an intelligent interest in the various articles composing their stock-in-trade.

For this reason Hardware and Metal readers will find of value information regarding the method of production of varnishes and Japans.

The Shellac Bleachery.

Varnish is by no means a modern invention, its use having been known in the earliest historic times. The Chinese and Japanese were adepts in the use of varnish, and the latter people carried the art to a high degree of perfection—as our modern word "Japanning" shows.

The Egyptians also understood the art of varnishing, and the pictures exhumed from the buried cities of Herculaneum and Pompeii are said to owe the brightness of their color to their having been covered with a species of wax varnish.

It is a peculiar fact that varnish which is satisfactory for one country may not be satisfactory for another. For this reason the manufacturer must pay particular heed to the climate of country to which he is desirous of selling his product. For instance, it has been found that English varnish particularly suitable in a uniform and humid climate may not give as satisfactory results when exposed to climatic extremes such as are met with in America.

The varnishes in modern use are divided into three classes: Fixed oil varnish, volatile oil varnish, and spirit varnish. The solvents used are, for the spirit varnishes, alcohol, and for the volatile oil varnishes, turpentine, while the fixed oil varnishes, which are the most important of all, have properly speaking, no solvent, the gums, or resins of which they are composed having first to be melted, and then combined with turpentine and linseed oil.

Spirit varnishes possess a limited value only for finishing purposes. The alcohol evaporating leaves a coating lacking in durability or elasticity, so that they are entirely unfitted for exposure. They are useful, and are principally used for first coats on work that is to be afterwards treated with a fixed oil varnish, filling up the pores of the wood and making a good foundation to work on. Spirit varnishes are also used to a certain extent to impart a finish to sundry articles of furniture, tool handles and other purposes not necessitating exposure to the weather.

Spirit varnish most commonly used is known in the finishing room as shellac. This shellac comes from East India and is a product of the insect "Coccus Tacca." It has a growth of years and is gathered by the natives and placed in hot water which dissolves the coloring matter, which is then taken out and dried and afterwards put into strong, coarse cotton bags which are held near enough to charcoal fires to melt the lac, without burning the bags. By twisting the bag the melted lac is forced out. When the coloring matter has not been well worked out, the lac is often very dark, so that there are several varieties in commerce, as orange, garnet, etc. White or bleached shellac, is, as the name indicates, lac rendered white and colorless by the bleaching process.

In finishing light and delicate colored woods, when a shellac coat is necessary, and it is essential to preserve the natural color of the wood, the grade known as orange shellac would not answer, and in these cases white shellac is resorted to, which is colorless, so will not stain the very lightest woods.

The bleaching of shellac is such an important feature of proper production that it has been found wise to install a large four storey building equipped with intricate machinery and appliances for the bleaching process. Some of the illustrations herewith referring to this process are particularly interesting.

Grinding Mills in the Shellac Bleachery.

Shellac is the only alcohol varnish that is used to any extent now-a-days. There are others that are employed for various purposes, such as sandarac varnish, which is used on violins, guitars and other musical instruments of the lute variety. French book varnish, used by book binders on the fine leather binding of books, etc.

Volatile oil varnish consists of a solution of the various soft gums or resins with turpentine. They are inferior in quality to both the spirit varnish and the fixed oil varnishes, possessing neither the brilliancy of the former nor the durability of the latter. The chief mission of the volatile oil varnishes is to mix with paint, to impart a gloss. They are also used on wall paper, maps, etc.

Fixed oil varnishes: The most important division of these classes are the prevailing varnishes in modern use, embracing carriage varnishes, house varnishes, cabinet varnishes and furniture varnishes. The ingredients of fixed oil varnish are three in number, consisting of copal, which is the base, linseed oil and turpentine.

In the Shellac Drying Room.

Turpentine is a product of the "long leaf" pine, Georgia being the main source of supply. The tree being squared on two sides for a few feet up from the ground, the sap rises and congeals on the blazed surfaces; the accretion being then scraped off, the turpentine is produced thereform by distillation, the residue being resin.

Linseed oil is one of the products of the flax plant, the part utilized being the seeds, which are first ground to meal and then submitted to hydraulic pressure, which extracts a liquid consisting of oil and mucilage; the latter is allowed to settle and the linseed oil is then drawn off.

Japan Making. Gum Melting.

To an onlooker, the manufacture of varnish is apparently an exceedingly simple process, merely consisting of putting a quantity of the gum copal into a copper melting kettle, wheeling it over the fire and letting it remain until the gum is melted; than adding a certain quantity of the prepared linseed oil — some stirring, a little more boiling, and lastly adding turpentine to the mixture, some straining and filtering, and lo! the varnish is made; and so far as the mere mechanical process is concerned, that is really all there is to it.

Simple as it appears to the novice, however, every process in the manufacture of varnish must be conducted with scrupulous care, unremitting attention and mathematical accuracy.

No guess work is permissible in varnish making. The gums are carefully sorted and graded for the various kinds of varnish; the quantities to be melted correctly weighed; the melting or cooking of the gum closely watched by the varnish maker by means of his stirring rod; and the proportions of oil and turpentine added, measured with the greatest accuracy. In addition to these leading essentials in the proper manufacture of varnish, there are numerous

minor points to be observed, which we have learned by experience and long acquaintance with gum copal and its faithful allies, linseed oil and turpentine.

We use the expression "minor points" however, in a relative sense only, as every point and precaution observed by us in the manufacture of our varnishes is based upon our personal experience of what is necessary to produce the best results; and all are factors in aiding to reach the goal we constantly strive for: "Perfection."

(To be continued).

CATALOGUES, BOOKLETS, ETC.

For the convenience of its readers HARDWARE AND METAL has opened its columns for the review of catalogues, booklets or other such publications issued by manufacturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. It is requested that when any of the trade write for any booklet mentioned in these columns that they credit HARDWARE AND METAL as the source of their information.

Sawyer Tool Mfg. Co.

The Sawyer Tool Mfg. Co., of Fitchburg, Mass., are issuing their "Catalog 'G'" which is an illustrated price list of fine tools and hardware specialties manufactured by them. Numerous rules of various kinds are given a prominent place in the catalogue. Gauges, bevels, scribers and other carpenters' tools of improved designs are illustrated and described at length. The catalogue is designed for distribution among mechanics as well as among the trade and the descriptions have been written to interest them. Though not lengthy they are complete, stating in a very few words just what the tool will do. Readers of Hardware and Metal who have not received a copy should write to A. C. Jenking, Room 215 Coristine Building, Montreal. Mr. Jenking is the Canadian agent for the Sawyer Tool Mfg. Co.

The Jones Side-Wall Register.

The United States Register Co., Battle Creek, Mich., have issued a booklet for the trade illustrating and listing their registers and fittings. All who are interested in hot air heating should have these booklets for references, as there is no doubt the use of side-wall registers is undoubtedly bound to increase materially in the next few years. Copies of the booklet will be sent on request to readers of Hardware and Metal.

The Propeller.

The Lozier Motor Co., New York City, have started to issue a monthly publication, "The Propeller," which should be of much interest to many readers of Hardware and Metal. Among the articles in the March issue are "Concerning the Automobile Boat;" "Motor Boats at Suburban Resorts," "An Attractive Motor Boat at Savona, Italy," "Lozier Marine Engines that are Bargains," and "Sundry Congressional Bills." Copies of this publication will be sent to Hardware and Metal readers on request.

Nail It Up.

THE S.W.P. AGENCY SIGN

represents the best in paint—the best made paint—the best advertised paint.

It means more paint business—the largest and most profitable business in your territory. It stands for "confidence" in the paint world and "progressiveness" in business.

Don't think these statements exaggerated or too promising—they are vouched for by the word and experience of thousands of agents—they are backed by a company that in 38 years have grown to be the largest paint and varnish makers in the world—that are everywhere recognized as the most progressive and enterprising in their line.

The Sherwin-Williams Co. have built their business upon rock-bottom quality and unstinted energy.

Allied with us you can make money out of paint—more money and a more lasting trade.

Write today for booklet B-13.

Business Changes

ONTARIO.

D. J. Keogan, general merchant, Hastings, has sold out.

G. McDowell, harness dealer, Listowel, has sold out to C. Prueter.

M. Fitzgerald, coal dealer, Oakville, advertises his business for sale.

Jacob Pfeffer, carriage maker, Tara, has advertised his business for sale.

J. Burgess, general merchant, Vienna, has sold out to A. B. Lawrason.

Buck & Stewart, general merchants, Hastings, have dissolved partnership.

N. G. Pratt, general merchant, Malakoff, has been succeeded by A. Johnson.

Fraser Bros., hardware merchants, Hastings, Ont., have given up business.

J. Prescott, general merchant, Rutherford, has sold out to C. L. Robertson.

A. L. Stewart, general merchant, Rainy River, has sold out to Lauer Bros.

Aitchison Bros. have bought the "Mammoth Fair" Hardware Company, Stouffville.

W. N. Braund, dealer in stoves and tinware, Dunnville, has sold out to Webber & Webber.

Johnson & Lee, tinsmiths, Athens, have dissolved partnership; M. C. Lee continues.

A meeting of the creditors of F. Lovelace, general merchant, Cargill, was held on March 22.

The assets of F. X. Laframboise & Co., general merchants, South Indian, have been sold.

The premises of Siebert & Co., general merchants, Plattsville, have been damaged by fire.

Cavers & Saunders, plaining mill and lumber, Dutton, have dissolved; Mr. Saunders continues.

The Centrifugal Windmill & Mfg. Co. have been granted a winding-up order; J. M. Taylor appointed interim liquidator.

McKenzie & Howell, hardware merchants, Goderich, have dissolved partnership; M. W. Howell continues the business.

Finkbeiner Bros., hardware merchants, Milverton, Ont., have dissolved partnership; W. F. Finkbeiner continuing the business.

The Parkhill Basket Co., basket and box manufacturers, Owen Sound, assigned to C. S. Cameron. A meeting of creditors was held on the 23rd inst.

QUEBEC.

H. Pepin, general merchant, Stanfold, has assigned.

A. J. Owen, metal merchant, Montreal, has registered.

Larose & Larose, contractors, Montreal, have dissolved.

J. A. Denis, hardware merchant, Montreal, has dissolved.

The assets of S. Peters, planing mill, Quebec, were sold.

H. Colbert, carriage maker, St. Gertrude, was burned out.

J. K. Milford, harness maker, Buckingham, has compromised.

Canada Wood Mfg. Co., Farnham, is asking for an extension.

Z. J. B. Vezina & Co., painters, Montreal, have registered.

F. X. Thompson & Fils, plumbers, etc., Montreal, have dissolved.

Drolet & Forget, plumbers, roofers, etc., Montreal, have registered.

The assets of the Sleeper Engine Co., Montreal, are to be sold at auction.

The Parker Coal, Ice & Cartage Co., Montreal, had their stables burned.

N. Charland, general merchant, St. Gertrude, has been burned out.

Guindon & Co., hardware, etc., Valleyfield, are selling out and removing to Edmonton, N. W. T.

H. Lamarre has been appointed curator to L. S. Plamondon, general merchant, South Durham.

The assets of L. Corriveau, general merchant, Ste. Anne de Beaupre, were sold on the 22nd inst.

A meeting of creditors of McGregor Bros., last manufacturers, Montreal, was held on the 23rd inst.

The Sherbrooke Stove Co., Sherbrooke, had their premises damaged by fire; the building was insured.

The assets of B. Larouche, general merchant, Les Grandes Bergeronnes, are advertised to be sold by tender.

V. E. Paradis has been appointed curator to J. L. Roberge & Co., general merchants, Thetford Mines.

H. Lamontagne & Co., wholesale manufacturers of harness, trunks, etc., Montreal, had their stock damaged by fire; insured.

P. Gagnon, general merchant, St. Flavie Station, has assigned; Lefaivre & Tashereau have been appointed provisional guardians.

MACHINERY

THE MACHINERY MARKET.

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 24, 1904.

CONDITIONS in the local machinery market are much the same as at the time of our last report. The improvement noted then has continued and there is a better feeling among machinery men than for some time past. It is not meant by this that there has been any exceptional activity for the season of 1904 has not yet been up to expectations. This week's sales would probably attract little attention in a busier season, but in a quiet season they have been of sufficient importance to afford considerable encouragement to the machinery houses.

As before stated the principal demand this season has been for engines and boilers and business in this line has been quite up to the average this week. The number of new sawmills commencing business this Winter has been very large and in sawmill outfits and sawmill supplies machinery men have found a business large enough to compensate to some extent for the decline in other lines. Similarly there has been an encouraging demand for wood-working machinery of almost all kinds.

In machine tools there is, however, very little activity this week and there does not seem to be much prospect of an immediate improvement.

Ontario.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 23, 1904.

CONDITIONS on the machinery market are very encouraging this week. Things have been improving gradually during the past two or three weeks, and prospects and actual business are now much better than they were at the beginning of the month. The opening of the railroads have much to do with this fresh impetus. The travelling salesmen of the machinery firms are now making their usual trips and consequently many orders have been closed. Many buyers are also in the city, and local dealers are competing for several large contracts, numerous enquiries are coming in from all over the province, and they indicate a busy market for weeks to come.

The improvement seems to be general. In all lines of machinery the market indications are good this week, sawmill outfits and wood-working in general leading perhaps. Iron-working machinery makes a very much better showing than it has done for months. Engines and boilers still have a good demand although it is not quite so noticeable as during the past week since other lines of machinery now show an equally good demand.

The electrical machinery market still makes a very good showing. The demand for motors and generators is exceptionally good for this time of the year, and local manufacturers have their hands full.

Agents for "Remanit."

STEAM users everywhere will be interested in the announcement that the James Morrison Brass Manufacturing Company, Limited, of Toronto, are now selling "Remanit," the pipe covering that is so generally used all over the world. "Remanit" is a non-conducting covering composed of "carbonized silk," and comes in rope form about $1\frac{1}{4}$ inch thick and "braid" about $\frac{5}{8}$ of an inch thick, and may be readily wound around the "T's" pipes, fittings and elbows, a feature that will be greatly appreciated.

"Reamnit" applied to pipes covered with ordinary non-conducting material will increase the non-conducting capacity from 20 to 30 per cent. It is used by many of the largest firms in England and the Morrison Company are now pushing it in Canada where it is meeting with a popular reception.

The Marine Review.

One of the most creditable trade publications of the year has just been issued by the Marine Review, Cleveland. It is a Spring "fitting-out" number and is made of surpassing interest and value by the authority and reputation of the contributors regarding the various phases of the shipping question, among whom are included Hon. Geo. B. Cortelyou, secretary of the Department of Commerce and Labor; Senator Wm. P. Frye of the United States senate; John McNeil, president of the Brotherhood of Boiler Makers and Iron Ship Builders of America, and Mr. Winthrop L. Marvin, author of "The History of the American Merchant Marine;" W. L. Brown, of the American Ship Building Co.; Hon. T. E. Burton, chairman of the Committees of Rivers and Harbors in the House of Representatives, and others of prominence in marine circles.

Pig Iron Production.

ACCORDING to the London Statist, it is probable that the world's production of pig iron in 1901 will exceed all records, notwithstanding the discouraging appearance at present of the prospects in the great iron and steel consuming trades. War between Russia and Japan may, and probably will, interfere with the production of either or both of these countries, but the total of both is not a serious item in the world's output. Last year the world's total was not so large as seemed at one time probable when the American furnaces were announced to be producing at the rate of 20,000,000 tons per annum. As it happened, by the restrictions introduced, as the end of the year approached, they only turned out in the twelve months about 18,000,000 tons. On this basis the world's make would not be more than 11,000,000 to 15,000,000 tons. In 1901 our contemporary looks for an output of 18,000,000 tons, even without any great industrial revival. For the plant is in existence, fuel is cheap, labor is clamant for employment, ore mines are being developed wherever possible, the output of the Swedish mines will be greatly increased, and blast furnaces are being improved to reach a higher average output.

MACHINERY AND ELECTRICAL NOTES.

THE American Locomotive Works have under way the construction in the Schenectady plant a very large locomotive for freight work on the Baltimore and Ohio Railway. It is of the Mallet articulated type, and will weigh over 207 tons. Of this weight 80 tons will be on the drivers; the wheel base is to be 30 1-2 feet, the traction power will be 70,000 pounds, and on a level track the locomotive is expected to haul over 10,000 tons. The coal capacity will be 13 tons, and a water capacity of 7,000 gallons.

The city of Kingston has decided on a by-law carried by a large majority to own and operate its own lighting plant.

The Henderson Roller Bearing Co., Toronto, are considering the question of establishing a branch of their industry in Brantford, Ont.

The great Northern Mines, Limited, Nelson, B.C., are going to install a new 40 stamp reducing mill in the Poplar Creek district.

W. R. & S. A. Campbell, wholesale manufacturing jewellers, Winnipeg, are fitting up their premises with machinery of the most approved type.

The sawmill of F. E. Sayre & Co., Montreal, has resumed operations. Since Christmas new machinery has been installed, and there is a further increase proposed in the near future.

Alfred Rubbra, of the Machinery Exchange, Montreal, sold a large boiler this week to E. C. Inglis & Co., butter tub manufacturers, Foster, Quebec.

Rhodes, Curry & Co., Amherst, N.B., have been awarded the contract for the construction of 100 box cars, 270 flat cars and 10 first-class vestibule day coaches for the Intercolonial Railway.

The nut and bolt works of the Portland Rolling Mills, St. John, N.B., will probably be ready for operation by June. The machinery is now on its way, and will be installed immediately upon arrival.

The machinery for the new sawmill at Fort Francis is on its way, and it is hoped that the mill will be completed soon. The machinery and equipment is all modern, and the mill will have a capacity of 60,000 feet per day.

T. G. Blackstock, vice-president of the War Eagle and Centre Star mines in British Columbia, says that the C.P.R. are about to install a lead pipe plant at Trail in connection with their smelter there. They also think of establishing a lead converting plant with a capacity of 8,000 tons of lead per annum.

The Montreal Rolling Mills Company have removed their office staff into new and handsome offices a few doors west on Notre Dame street. Their new quarters are very commodious but enlarged offices were rendered necessary by the expanding business of this important industry.

D. O'Connor, of Sudbury, and T. B. Caldwell, of Lanark, say that if the electrical process of smelting is introduced into Canada and proves successful, within three years steel rail rolling mills will be established at Lake Tamagami, north of North Bay, on the Tamiscaming Railway. The iron ore of the mines in that district is of a high grade, and there are valuable water powers in the vicinity from which electricity may be developed.

The Westinghouse Machine Co., Pittsburg, are building a 11,000 horse-power turbo-generator for the central power station of the Pennsylvania Railroad tunnel from Jersey City to Long Island. The advantages of economy of floor space characteristic of the turbine are strikingly illustrated in this large unit. for in spite of its maximum capacity of 11,000 horse-power, the space occupied by the turbine measures only 13 feet 3 inches by 27 feet 8 inches. This works out to be 30 horse-power per square foot of floor area.

C. O. Macdonald, in the interests of the North Atlantic Collieries, Limited, which company controls $200,000,000 tons of coal in the heart of the Cow Bay Basin, Cape Breton, has left for Europe, where he will inspect the principal sub-marine colleries of Britain and other European countries. The submarine coal mines, already established at Port Morien, C. B., by Mr. Macdonald, have proven very successful, but the company expect that with the ideas that Mr. Macdonald will have picked up during his tour of inspection at their command they will be able to open up the South Head colleries much more economically and rapidly than the Port Morien ores were opened up.

Geipel's Steam Trap.

THE Fairbanks Co. are offering to the Canadian trade Geipel's automatic train cock or steam trap. The need of some such contrivance is recognized by every engineer. Every steam pipe, steam cylinder, or steam coil should be fitted with a drain cock to drain off the water which collects through condensation. This is the purpose of the Geipel steam trap.

When a steam pipe is not drained, the water in it invariably gets into the engine, It is almost certain to cut out the packing in the engine glands, and there is danger of breaking the cylinder cover if work is started suddenly. The steam trap should pay for itself in a few days by saving the renewal of packing in engine glands.

The advantage of an automatic drain cock is that with its use there is no danger of any trouble with water in the steam. Wet steam is very uneconomical and it is hard on packing and wearing surfaces. Steam can be kept dry by placing one of these automatic drain cocks at every point on a steam line where it is possible for water to collect.

The makers claim for this steam trap several advantages. First, its simplicity of construction. It has no internal levers or working parts boxed in and exposed to the action of the steam and water. It will work equally well on cylinder or steam pipes, and in any position. The valve is always open to the atmosphere, except when steam is passing, and therefore the water drains away from steam pipes as fast as it collects, even before steam is turned on. The valve is also very easily examined and replaced; the operation requires only two minutes. It can be opened by hand to blow through, and if desired it can be left open.

The Fairbanks Company, Montreal, issue a booklet explaining the merits and uses of this trap which will be mailed to any reader who asks for it.

Machinery Hockey.

The Fairbanks Company, Montreal, defeated Darling Bros. in a well contested game on Tuesday night by a score of 2 to 1. The ice was not in condition to allow very fast play but the game was so close that the interest was maintained to the last. The players lined up as follows:

Fairbanks Co.—A. M. Bremner, goal; W. E. McLean, point; J. Hurst, cover point; M. Davidson, centre; D. Nicholson, left wing; L. Watson, rover; G. W. Beauboy, right wing.

Darling Bros.—F. Rhine, goal; S. Rockford, point; W. Guerin, cover point; G. Butcher, centre; A. Wilson, left wing; L. Benoit, rover; G. Fortia, right wing.

IDEAL WOVEN WIRE FENCE.

Strength and durability in their woven wire fence are the features claimed by the "Ideal," manufactured by the McGregor-Banwell Fence Company, Limited, Walkerville, Ont. The use throughout of No. 9 hard wire and the peculiar lock that cannot slip establish its claims to superiority over all other makes. A catalogue of fencing and gates, showing styles for every purpose, will be mailed free by the company on request.

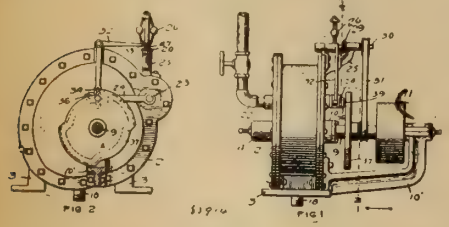
Patents Granted in Canada.

An authoritative report of patents granted by the Canadian Patent Office for recipes and devises of interest to HARDWARE AND METAL readers.

Rotary Engines.

GRANTED Angus A. Methven, Minneapolis, Minnesota. Claim: 1. The combination with the cylinder having inlet and exhaust ports, of a revolving piston arranged therein, a cam plate or disc mounted upon said shaft, a conical valve having a port adapted to register with said inlet port, an arm or lever provided on the stem of said valve, a block slidable on said arm and having a roller adapted to travel on said cam plate, a centrifugal governor and means connecting said governor and said sliding block, whereby the movement of said valve is regulated and the steam passing through said inlet port controlled, substantially as described.

2. In a rotary engine, the combination, with a cylinder, of a piston therein, a shaft therefor, a valve adapted to control the admission of steam to said cylinder, a disc connected with said shaft and having an irregular path or track, a lever connected with said valve,



a roller adapted to travel in the path on said disc and having a sliding connection with said lever, and a centrifugal governor for controlling the movement of said roller with respect to said lever and thereby regulating the operation of said valve and the admission of steam to said cylinder, substantially as described.

3. The combination with a cylinder having inlet and outlet ports, of a revolving piston arranged therein, a shaft therefor, a cam plate or disc mounted upon said shaft, a rotary valve adapted to control the admission of steam to said cylinder, a lever provided on the stem of said valve, a block slidable on said lever a suitable connection provided between said block and said cam plate, a centrifugal governor, and means connecting said governor and said block, whereby as the speed increases or decreases said block will be moved along said lever and the valve closed or opened, substantially as described.

4. The combination, with a cylinder, having an inlet port 19 and an exhaust port 17, of a rotary valve 20 adapted to close said inlet port, means for automatically operating said valve to close or open said port, a piston provided in said cylinder and comprising two sections or members said sections having radical slots and an intermediate communicating slot, a single wing member or section having a shank portion to slide in said communicating slot and head members to slide in said radical slots and alternately engage the walls of said cylinder, substantially as described.

5. In a rotary engine, the combination with a cylinder, of a piston therein, a shaft therefor, a rotary valve adapted to control the admission of steam to said cylinder, a disc provided on said shaft and having a cam track or path on its surface, a lever provided on the stem of said valve, a block slidable thereon and engaging said cam track, a centrifugal governor, and means connecting said governor and said block whereby the admission of steam to said cylinder may be automatically regulated, substantially as described.

6. The combination with a cylinder having inlet and exhaust ports, of a revolving piston within said cylinder having communicating radial slots in its opposite sides, a wing member or section slidably arranged in said slots and adapted to alternately engage the walls of said cylinder, a rotary cut-off valve for regulating the admission of steam through said inlet port, a lever provided on the steam of said valve, a block slidable on said lever, and a centrifugal governor mechanism connected with said block, whereby as the speed increases or decreases said block will be moved along said lever and said cut-off valve opened or closed.

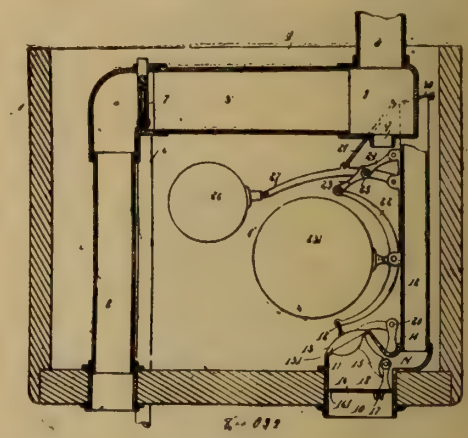
7. The combination with a cylinder having inlet and exhaust ports, of a revolving piston within said cylinder, a wing member or section slidably arranged in slots in said piston and having ends adapted to alternately engage the walls of said cylinder, a rotary cut-off valve for controlling the admission of steam through said inlet port, a lever for said valve, a cam disc provided on the shaft of said piston, a roller adapted to travel on said disc and having a sliding connection with said lever, and a centrifugal governor for controlling the movement of said roller with respect to said lever, thereby regulating the operation of said valve and the admission of steam to said cylinder.

Discharge for Water Tanks.

Granted Charles W. Schultz, Detroit, Michigan. Claim: 1. A discharge valve for water tanks, having in combination a hinged closure valve, a pair of toggle joint levers pivoted at both ends, one of its end pivots being pivoted directly or indirectly to the valve, the parts being so arranged that when the valve is upon its seat, the three pivots of the toggle joint levers shall be in their centres, and means for moving the middle joint off from its centre.

2. A discharge valve for water tanks, having in combination a hinged closure valve, an arm projection into the discharge pipe, an oscillatory leaf in the discharge pipe underneath the closure valve, an arm on said leaf engaging the arm on the valve on the hinge side thereof, whereby the valve and leaf swing in opposite directions, substantially as described.

3. A discharge valve for water tanks, having in combination a hinged closure valve, an arm projecting from the valve into the discharge pipe, an oscillatory leaf in the discharge pipe underneath the



closure valve, an arm on said leaf engaging the arm on the valve on the hinge side thereof, whereby the valve and the leaf swing in opposite directions, a float engaged by a link connection to the valve, substantially as described.

4. A discharge valve for water tanks, having in combination a hinged closure valve, an arm projecting from said valve into the discharge pipe, an oscillatory leaf in the discharge pipe underneath the closure valve, an arm on said leaf engaging the arm on the valve on the hinge side thereof, whereby the valve and the leaf swing in opposite directions, a float engaged by link connections to the valve, a locking link between the float and a fixed part of the tank, and means for automatically breaking the lock, substantially as described.

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

If **CORUNDUM** be no better than emery, then emery is no better than iron ore.

If you grant that the United States Government is right when it states that emery is a mechanical admixture of Corundum and magnetite or hematite iron ore, you must at once grant the above deduction is logical.

But to use iron ore for polishing or grinding iron and steel would be absurd. If so, why use iron ore mixed with some Corundum instead of the pure abrasive **CRAIG MINE CRYSTAL CORUNDUM.**

The P. & C. Hydrant.

INCESSANT care is essential in a large printing office, yet with the best of care mistakes will occur. In referring to the new hydrant, now offered the trade by the Fairbanks Co., last week four lines of type were misplaced, quite destroying the sense of the article, which should have read as follows:

As will be seen by referring to the cut, this hydrant has a straight barrel and an unobstructed water way right through from the in-take to the hose nozzle which gives a greater force to the stream than can be obtained with a hydrant in which the water way is more or less reduced at certain points by corrugations and curves.

RETURNED MAR 28 1914

One of the most important points in connection with the hydrant is the positive action of the drip valve which is not actuated by a spring but is worked by the operating rod itself. The rod has a fine thread which closes the drip valve tight when the hydrant is opened, and opens the drip valve when the hydrant is closed. As the drip valve is at the bottom of the hydrant all the water is allowed to run out and moreover no dirt, pebbles, roots or other foreign matter can obstruct it. The valve is left free at all times to perform its duty and there is no possibility of the hydrant freezing. The valve discs are all made of solid rubber and the seats are bronze. As the operating rod and, in fact, all working parts, are made of bronze, no rust or corrosion of those parts can take place.

The Fairbanks Company have recently secured through their Winnipeg branch the contract to furnish the hydrants and valves for the water works about to be constructed at St. Boniface. The contract was secured because the purchasers recognized the advantages described above. They were also influenced by the ease of access to the working parts of the hydrant in case any repairs should be necessary. It is not necessary to dig up the hydrant to make repairs for the working parts can be taken out by removing the cap. The Fairbanks Company will furnish further information to any readers who ask for it.

Getting Plans for New Foundry.

Mr. W. S. Fisher, of Emmerson & Fisher, St. John, N. B., was in Toronto on Monday of this week en route home from the Western States where he has been visiting some of the large foundries in Chicago and elsewhere with a view of making improvements in the plan of output of the firm's stove foundry at Sackville, N. B. He has also been incidentally keeping his eye open for new ideas in warehouses and store construction suitable for the wholesale and retail hardware trade in which his firm is engaged in St. John, the firm having decided to put up a new building this Spring. Referring to trade conditions he said that in the Martitime Provinces, as elsewhere, the severe Winter had interferred to some extent with trade but that an improvement was now being experienced. "The last figures I saw in regard to Winter port trade of St. John," said Mr. Fisher in reply to a question, "showed increase over the figures this year. I do not know what we are to gain from the Grand Trunk Pacific scheme, we only hope that they will be compelled to route their freight through Canadian ports."

FLINTKOTE ROOFING SALES.

Under the energetic management of J. B. Gass, the Canadian sales of Flintkote roofing are being much increased. Two carloads were shipped this week from Montreal to points in the Northwest. New territory is being opened up all the time.

A GOOD INDICATION.

Owing to the increase in business of E. W. Gillett Co., Limited, they find the 10 large floors in their building at 32-34 Front street west, to be inadequate to their requirements and they have recently rented additional floor space in first building west of their own, but as a 14-foot lane divides the two places, it was necessary to connect them by a fire-proof bridge. We are informed it is the intention of this company to commence the erection of a large up-to-date factory in about a year from now.

INQUIRIES FOR CANADIAN TRADE.

The following were among the inquiries relating to Canadian trade recently received at the Canadian Government office in London, Eng.

1. A firm of elastic web and smallware manufacturers are seeking to extend their business with Canada, and make inquiry respecting the appointment of agents.

3. A commission agent and general merchant in Newcastle is prepared to represent a good Canadian house in almost any line of business.

4. A North of England firm asks to be placed in touch with likely Canadian exporters of pit props.

6. A London firm of merchants, who have hitherto confined themselves to the South African trade, are desirous of establishing relations with Canadian business houses buying British and French goods.

8. Inquiry is made respecting producers of rotten stone in Canada by a correspondent who is interested in this mineral.

9. A Glasgow firm desires to get into touch with importers in Canada of bricks, fireclay pipes, retorts and other fire clay goods.

10. A gentleman with good business experience leaving England early in April to take up his residence in Canada is seeking a few agencies of British firms requiring a representative in the Dominion.

11. Inquiry is made for names of Canadian furniture manufacturers who can ship office furniture, telescope tables, bedroom suites, etc., by a person seeking to sell on commission or to obtain a buying agency.

12. A travelling agent in the North of England is seeking the representation of Canadian manufacturers.

13. A New Zealand firm have asked to be supplied with names and addresses of Canadian shippers of furniture, hardware, boots and shoes.

16. A firm of petrol and steam motor manufacturers have asked to be furnished with suggestions or information that might be useful in developing a demand in Canada for their productions.

The following enquiries were received at the Canadian Section of the Imperial Institute, London, Eng.:

1. A manufacturer of fishing rods and tackle is prepared to appoint a suitable Canadian resident agent.

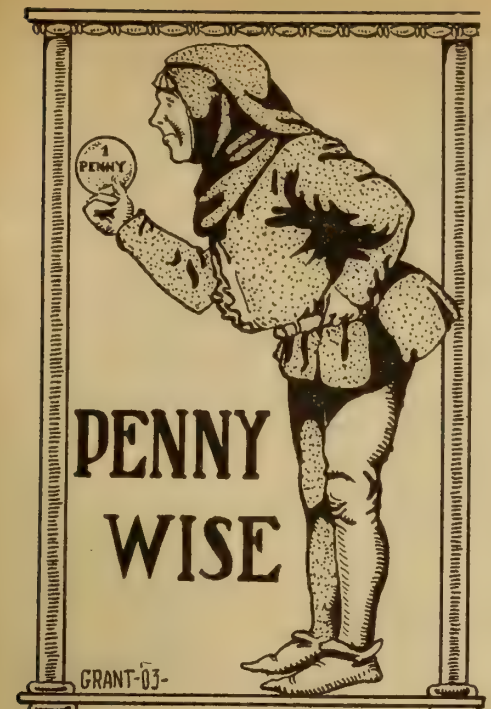
2. A firm manufacturing all varieties of iron and wire fencing, hurdles, gates, etc., wishes to develop trade in Canada.

3. The makers of a new patent boiler-cleaning material seeks the services of an active Canadian agent.

[The names of those making inquiries may be obtained from the Editor of [HARDWARE AND METAL.]

HARDWAREMEN WILL BANQUET.

Much interest is being taken in Toronto hardware circles in the second annual banquet of the Toronto Retail Hardware Merchants' section of the Retail Merchants' Association of Canada, at Webb's on Friday evening. This gathering is now recognized as the social event of the season in Toronto retail hardware circles.



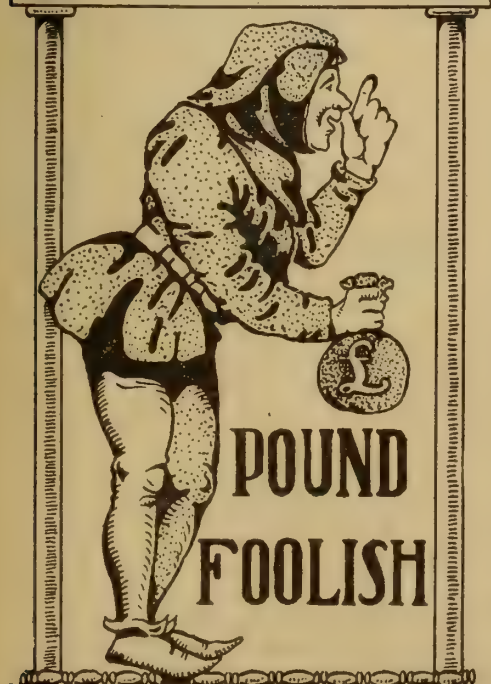
Hold a dime close to your eye with your right hand and a bright silver dollar a few inches away with your left; you cannot see the dollar because the smaller coin obscures your vision.

So it is with some people; in their eagerness to save a dollar they often lose sight of the fifty within their reach.

They would rather have a penny than a pound — if it meant spending the penny to get the pound.

Does the illustration apply?

Are you saving (?) money by not advertising in HARDWARE AND METAL?



MACLEAN PUBLISHING CO.-DEPT. OF ADVERTISING SERVICE

HARDWAREMEN, ORGANIZE!

THE State Associations of Retail Hardware Merchants in all parts of the United States have during the past months been holding the annual conventions.

While papers on technical subjects and business topics have contributed in large measure to the strength, to the value, of the meetings the predominate note has been "Organize, organize." In every meeting the most serious and progressive have united to emphasize the need of greater organization.

The following references to this feature of the meetings is from the Stove and Hardware Reporter, which has reported in detail the various gatherings: "The watchword adopted at nearly every meeting of hardware men has been 'Organize.' Hundreds of speakers, in different states, have reiterated the old saying, 'In union there is strength.' It is none the less true, however, because it is old. It is only a few years since hardware and stove dealers began to get together, to compare notes, to seek remedies for abuses and to advance their mutual interests. Go back even a dozen years and little was thought on the subject. To-day it is hard to find a dealer who will not acknowledge the benefits of organization, although there are plenty who refrain from adding their names to the lists, who hang back, thinking the other fellows will do the work and the trade in general receive the benefit. They are mistaken. It needs individual membership in an association and an active membership at that to secure the greatest gains and results.

"The cry to organize is spreading over the country. The movement has but just begun. It is going to grow, but what the grand result will be no man can forsee. Certainly organization is advantageous—not only state and national but local organization. The village society, even though composed of various classes of merchants, is beneficial. It helps each in his relations to a state organization and increases the power of the greater body.

"There are many beneficial features connected with hardware organizations and they are going to grow mightily in importance the coming year if every one at present enrolled will do his duty and see that he brings at least one new member into the fold.

"Organize is the watchword! Let the good work go on and be pushed unceasingly and uncompromisingly."

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RECIPROCITY WITH THE UNITED STATES.

IT seems to be the universal tendency of man to fail in appreciation of what is within reach and to ever strive after the unattainable.

At one time Canadian economists, politicians and business men were convinced that Canada needed closer commercial relations with the United States. Delegation after delegation went from the Canadian Parliament to Washington to ask for a reciprocal tariff arrangement which might be of advantage to both countries. Canada was at the time willing, even anxious, to give much in the hope of some gain for herself. But the United States would not deign to even consider seriously the Canadian proposals. Large interests which might have been affected by reciprocity with Canada used their influence so skillfully and so persistently that the efforts of those who desired closer relations with Canada were completely overshadowed.

In the passage of the "McKinley Bill," the climax of United States hostility to Canada was reached. At one stroke this enactment shut out many products, the sale of which contributed much to the country's prosperity. In the opinion of many Canada was ruined by this hostile legislation. It is well known that it takes years to turn the farmer from the crops he has found profitable under certain circumstances and to direct his energies to building up industries comparatively new to him. But this was done, and while the years immediately after the passage of the McKinley Bill were decidedly lean ones, they were well spent in turning the attention of the Canadian farmer to stock raising, cheese and butter making, etc. In a decade a market has been secured for Canadian products in Great Britain which is infinitely more valuable to Canada than our exports of agriculaural products to the United States ever could have been.

At the same time the contemptuous indifference to Canadian trade manifested by the utterances of leading public men of the United States was exasperating in the extreme.

All of this combined to nourish a national spirit and to develop a bond of Imperial loyalty which expressed itself first in the preference of 33 1-3 per cent. to British products and later in the general approval which greeted the statement by Sir Wilfrid Laurier, after the failure of the treaty negotiations in Washington a couple of years ago, that "Canada should go no more to Washington for tariff favors."

Since that utterance, which bears the weight of the conviction of the Canadian Premier and the moral support of the Canadian people, reciprocity has been a dead issue in Canada. Almost in inverse ratio as the desire for reciprocity has decreased in Canada it has increased in the United States. To-day it is recognized that Canada is, in comparative proportion and almost in aggregate volume, the best customer the United States has. It is also recognized that the strongest industrial organization in the Dominion, the Canadian Manufacturers' Association, seeks a higher tariff against United States goods even though that entailed a bigger preference to Great Britain.

So far Canada has never been stampeded into tariff enactments as a result of the hostility aroused by the unfriendly tariff legislation of the United States. And it is to be hoped that the same caution, the same moderation will dominate our future relations with the big Republic to the south.

Yet it must be made clear to United States commercial bodies that any movement for reciprocity with Canada must be initiated by the United States and must be backed by sufficient influence to guarantee to the Canadian Parliament that its proposals will be considered on a purely business basis. Canada is willing to give advantages to the United States, but for each advantage she gives she will insist on an equivalent in return.

At a banquet in Boston the other evening two of the foremost speakers, H. M. Whitney and Col. Clarke, in pointing out Boston's need of developing the fish trade, declared in no uncertain tone in favor of reciprocity with Canada.

It must be remembered, however, that Canada is unready to discuss reciprocity in any one line. Unless the United States fish interests, lumber interests, manufacturing interests, etc., who desire closer relations with Canada can unite their forces sufficiently to win the support of the United States Congress and overcome the antagonism of the United States Senate their desires for reciprocity will be of no avail.

STUDYING CANADIAN REQUIREMENTS.

THE complaint is often made by Canadian wholesale houses, and with more or less justification in fact,—that the British manufacturer is slow to adapt himself to the requirements of the Canadian market, that he makes his goods according to certain patterns, and refuses, even at the urgent solicitation of his agents in Canada who know what will sell and what will not, to alter his designs in order to suit the peculiar requirements of this market. There are none of our readers who have not heard this complaint and probably there are few who would not be prepared to substantiate the charge by citing specific instances. It is gratifying,

therefore, to find that some notice is being taken of this complaint by leading English manufacturers and that some of the more energetic are sending their representatives to Canada to find what patterns are best suited to the requirements of the trade in this country. The intention is that after consulting with Canadian jobbers and retailers these representatives shall return to England and supervise the manufacture of goods specially designed for the Canadian market.

Seller must always accommodate himself to the requirements of buyer if he would secure trade. There is a great trade to be developed in many lines if the British manufacturer will recognize that the Canadian market is of sufficient importance to merit particular attention. With the advantage of a preference and with his German rival handicapped by a surtax, the British manufacturer should be able greatly to increase his exports to Canada if he will manufacture for Canada the goods which the Canadian public demand.

ONE RESULT OF NEW ZEALAND PREFERENCE.

HARDWARE AND METAL is now receiving tangible proof of the increased interest which New Zealand importers are taking in Canadian trade as a result of the preference which has recently been established. This paper had a very respectable circulation among the leading importers of that island colony before the preference was granted, but the latest mails are bringing in new subscriptions and inquiries for sample copies in such numbers as to show that the hardware importers of New Zealand are very much interested in the prospects of a development of trade between the two countries. The hardware importers of New Zealand recognize in Hardware and Metal the representative of the hardware and metal trades of Canada, and it is to its columns that they refer for the announcements of Canadian firms who may have something to offer to New Zealand importers.

That there is a profitable trade to be developed in New Zealand is recognized by American manufacturers and jobbers perhaps better than by our own Canadian business men. Hardware and Metal has been informed on reliable authority that numerous American houses have been trying to make arrangements to ship Canadian goods in bond to their own ports and from there to New Zealand. Our Canadian business men should not allow this profitable trade to be captured by American houses by any such devise. The preference is intended to give the advantage to us and thereby to develop inter-Imperial trade. We should make the very most of the advantages offered us.

BUILDING UP TRADE AMONG FARMERS.

THE hardware dealer can perform a bit of good work in ascertaining the names and addresses of all the farmers in his section—all those with whom he may reasonably expect to do business. This work is not formidable; the voters' lists for the different townships from which he gets business will furnish him with abundant and accurate material. He will find it best to enter these names on cards such as are furnished by firms making a specialty of card-index systems. This card system is not expensive and when intelligently and faithfully used can be made a most valuable feature of a merchant's business—an asset worth a good many dollars in any reckoning-up of one's affairs

Having lists prepared, on cards such as are suggested, it will be a profitable task to classify these lists under as many heads as is found desirable. For example, there are among farmers those who devote a good deal of time and care to the raising of fowl for egg raising and for dressed poultry. The hardware dealer furnished with a list of poultry breeders could take up the matter of supplying these people with their requirements, by correspondence or by special circular. Of course this supposes that the dealer is prepared to furnish the goods in question.

Many farmers are interested in dairy supplies, cream separators and other appliances. To send letters or circulars to every farmer without distinction is clearly waste, but the alert merchant can find out by a little effort what farmers are likely to be interested in dairy supplies.

In the opening up of Spring, building operations begin. Some farmers will be building houses, some barns. The procuring of some supplies has been going on all Winter. By keeping one's ears open, by a little poking about, by watching the correspondence in the local paper, and by questions one can make up a very good list of probable buyers of building supplies. This list may be circularized or written to—not once or twice, but regularly. Persistency is a great factor in the procuring of business.

Gardening time provides another occasion for good work and correspondingly good sales. For this line practically the entire list can be used. It will pay the dealer to go to his printer and have printed an attractive circular, illustrated and with prices given. The illustrations or "cuts" can be almost certainly had by applying to the manufacturer or jobber of the lines enumerated.

And so on, throughout the year, every season provides the hardware dealer with an opportunity to advertise himself and to expand his trade. What he wants is the names of probable buyers of the goods he can sell. The getting of these names and their classification is a process that ought to go on throughout the year, and years. To attempt to complete it in a week or month is folly. Suppose, for example, the hardware dealer sells stoves. It is impossible for him to know without enquiries, made as opportunity presents, what people are interested in a new stove for the coming season. It is a very simple matter for him, however, to say to his customers as they visit his store: "Are you likely to buy a stove next Fall?" and to make out cards such as have been suggested, for all those who give him a reassuring reply. By this means when the stove-buying season opens, the hardware dealer will have on hand a valuable list to whom he can mail circulars and letters periodically. It is certain that the dealer who goes after trade so stands a much better chance to make sales than do his competitors who have not this advantage of knowledge and opportunity.

The time and trouble involved in pursuing such plans for the enlargement of one's trade have their vindication in the returns in dollars and cents that will surely result.

THE LATE E. N. HENEY.

THE late E. N. Heney, of Montreal, was known to many readers of Hardware and Metal as the head of one of the most reputable and enterprising wholesale saddlery hardware houses in Canada and was a very true friend of this paper. A correspondent who was very intimately acquainted with Mr. Heney writes to the Montreal Star the following tribute to his memory:

The death of few men would have occasioned a more general loss in the social, mercantile and political life of the city than that of the late E. N. Heney.

In all the varied relations of citizenship he was not only fully conscious of his duties and responsibilities, but made a steadfast and earnest effort to discharge them.

As a merchant and manufacturer he was progressive and advanced, but at the same time conscientious in the best sense of the word. The proper development of the business which he had built up with its ramifications with foreign lands constitutes a monument to his spirit of enterprise. The ordinary citizen may be astonished to learn that in one season recently, the firm of which Mr. Heney was the head, manufactured and shipped a consignment of jaunting cars for a customer in Ireland and a shipment of jinrichshaws on an order from Japan. His keen intelligence and wonderful powers of observation and good judgment rendered him a counsellor to whom his fellow business men were glad to resort in cases of difficulty and perplexity. That his advice was freely given is as true as that when given it was full of common sense and wisdom. And not only was the counsel itself precious, but it was doubly so by reason of the kindly sympathetic manner in which it was offered. On boards of directors his assistance was sought to a considerable extent, and, indeed, he was compelled to decline many such appointments because of the exacting nature and demands of his own immediate business. Few men were better posted upon all trade questions than Mr. Heney; for not only had he that experience and those powers of observation to which reference has been made, but he was a diligent reader and student of all the current literature on such subjects and kept himself thoroughly abreast of the current thought of the time. A short time since, during the visit of Mr. Henry Norman, M.P., of England, Mr. Heney entertained that gentleman at luncheon and in the discussion which ensued in reference to Mr. Chamberlain's preferential trade proposals the variety and breadth of Mr. Heney's knowledge was freely remarked.

In political matters Mr. Heney was a Conservative, who sincerely believed in a protective policy for Canada, and the party had no more devoted and unselfish supporter than he; in season and out of season, his time and energy were at the disposal of the party, and his place in the counsel of its chiefs was naturally a conspicuous one. Few English-speaking members of the province occupied so confidential a relation to the leaders, and his sad death will be keenly felt by them especially.

In all the more private and kindly relations of life it is hard to conceive a more lovable, urbane and gentle personality than that of Mr. Heney. Modest and unassuming to a degree, he would never, however, swerve from the assertion of his views of what he deemed to be the right, but his dissent, if such had to be expressed was given with such unobtrusiveness, such an evident sincerity and so earnest a desire to spare the feelings of those differing from him that his words carried exceptional weight and influence. The same qualities which rendered him the business adviser and policital counseller naturally made him invaluable as a private friend, and few men in the city had more warm, devoted friends and admirers. Those who knew him best, however, in those still more sacred relationships to which reference may not be made here, alone can know and appreciate the real worth and rare delicacy of his fine and tender nature and of his patience, of his charity, of his sympathy with misfortune, and of his unobtrusive generosity and kindness.

> His life was gentle, and the elements
> So mixed in him that Nature might stand up
> And say to all the world: "This was a man."

Mr. Heney's friends were legion, his enemies did not exist, for though always tenacious of his own opinion and rights, he was ever considerate of those of others and just in his dealings with all men. In every question that appertained to the welfare of the community in which he dwelt he exhibited an intelligent citizenship and exerted himself freely in all movements calculated to good government.

He will be sorely missed for he was a model citizen, and it will be many a day before those who knew, admired and esteemed him, can forget the kindly face and sympathetic presence of the departed.

PERSONAL MENTION.

Mr. Thos. Butler, of Butler & Co., harness makers, Ottawa, is dead.

Mr. R. W. Ross, of R. W. Ross & Co., hardware dealers, Prescott, Ont., is dead.

Mr. D. D. Currie, general merchant, Belleville, has gone to Saskatoon, N.W.T., where he intends opening a general store.

Mr. J. E. Westcott has sold out his interest in the Grand River Metal Works of Galt, Ont.

Mr. Walter Dorken, of Dorken Bros. & Co., Montreal, is on a two weeks' business trip to Winnipeg.

Mr. J. R. Wilson, manager of Thos. Robertson & Co., Montreal, left for England this week. Mr. Wilson expects to be absent about six weeks.

Mr. Archie MacFarlane, manufacturers' agent, Montreal, is visiting the trade this week in Toronto and various other points in Western Ontario.

Mr. J. Hofman, of the American Axe and Tool Company, has returned to Montreal from a business trip to the Pacific Coast. He also visited a good number of the trade in Western Ontario on his return journey.

Mr. J. B. Gass, the Canadian representative of J. A. & W. Bird & Co., Boston "The Flintkote Folks," has returned to Montreal from a business trip to New Ontario points. Mr. Gass was as far north as Liskard on the Temiskaming Railway.

Mr. J. R. Terrill, one of Caverhill, Learmont & Co.'s travellers, whose illness was mentioned in Hardware and Metal some weeks ago, returned to Montreal last week, afrer a long vacation, apparently quite restored to health. His retail friends will be glad to welcome him to their stores and offices again.

Mr. Martin Ratcliffe, representing Ratcliffe & Ratcliffe, Brimingham, Eng., was a caller at the Montreal office of Hardware and Metal on Wednesday last. Ratcliffe & Ratcliffe are manufacturers of electrical fixtures and supplies, and Mr. Martin Ratcliffe is visiting the Canadian trade with a view to extending his firm's business in Canada. Mr. Ratcliffe left for Western Ontario points on Thursday.

Montreal, March 25, 1904.

Hardware.

THE beginning of the big rush which has been expected for weeks is plainly seen in a round of the jobbing houses to-day. The freight blockade is now broken and both on the main and branch lines of the railways large shipments are now being made. Perhaps the retailer suffered most of all during the blockade but the jobber also had his troubles. If the retailer could not get his goods neither, in many cases, could the wholesaler. The latter is dependent for his supplies of some lines of goods upon the American manufacturer and for weeks freight was stalled at various points and the jobber had to wait as patiently as he could. Even now, supplies of many lines are short and the jobber is having his own troubles which the retailer should not forget when he is anxiously awaiting the arrival of long delayed shipments of goods. Meanwhile the wholesale houses are scenes of bustling activity and every effort is being made to supply the demand at once. Manufacturers have large accumulations of stocks and are anxiously waiting for the railways to relieve the congestion of their storehouses.

There are few quotable changes in the list this week. Cotton rope has been advanced to 21c for quantities and for small lots a higher price is obtained. American single barreled guns are cheaper at present owing to a disagreement among the manufacturers. There was an agreed price until quite recently when some of the manufacturers commenced selling at lower prices. This has caused great confusion and almost all lines are now being sold at or very near cost. It is not likely that this state of affairs will continue for long but in the meantime the retailer has an opportunity to buy single barrel guns cheap.

Sap Spouts—The sugar season is now commencing and sap spouts are selling in large quantities. The price is $6.75 per 1,000. Cook's sugar bits are selling at 50 per cent. off list.

Churns—There are numerous inquiries for churns and actual business this week has been brisk. The discounts on "Favorite" are 40 and 15 per cent. f. o.b. Montreal and 30 and 10 per cent. f.o.b. factory.

Poultry Netting—Orders are still being received but the greater part of the season's business is probably already booked. Shipments are now being made. Discounts are, for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-gauge, the discounts are 55 and 5 per cent.

Galvanized Poultry Nettings Staples—In fair request at steady prices. We quote as follows: Sizes 5-8, 3-4, 1, 1 1-8, 10-lb boxes, $12.50 list; 25 and 50-lb boxes, $12.25 list; 100-lb boxes, $12 list. Less 57 1-2 per cent.

Bed Staples—The discount on the Montreal Rolling Mills Company's and the B. Greening Wire Company's lists is 57 1-2 per cent. The discounts on the Dominion Wire Company's list are 25 and 2 1-2 per cent.

Blind Staples—The discount is 40 per cent.

Boxwood Rules—Discounts range from 52 1-2 to 50 per cent. off list.

Hardwood Step Ladders—Prices are not uniform and are scarcely quotable, but as was noted before, there has been a general advance of about 20 per cent.

Shot Guns—As noted above, American single barrel shot guns are now exceedingly cheap. Until a short time ago there was an agreed price among the manufacturers but this price is not now being maintained and owing to excessive competition the trade can, for a short time at least, secure these goods at or near cost. It is scarcely likely that this condition of affairs will continue very long.

Wooden Goods—As noted last week, some lines of wooden tubs have been advanced about 5 per cent. All lines of wooden goods are firm in price.

Heavy Screw Hooks and Hinges—There is considerable improvement in the demand. Size 12 inches and upward are selling at $3.25 per 100 lbs; the price of 6, 8 and 10-inch sizes is $4.25.

Lawn Mowers—There is a steady demand this week at the following unchang prices: With 8-inch wheel, sizes 12, 14 and 16 inch, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18 $4.75; 20, $5.25 each.

Garden Hose—There is an excellent demand at the following unchanged discounts: Trade, 75 per cent.; Western, 65 and 10 per cent.; White, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; cotton, 60 per cent.

Harvest Tools—The discount is 60 per cent.

Spring Hinges—There is a fair demand at steady prices. We quote: No. 5, $17.25 per gross; No. 10 $18 per gross: No. 20, $10.50; No. 120, $20 No. 51, $9.25; No. 50, $27.50.

Wire Nails—Prices continue steady at the following figures: $2.40 per keg carlots and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford and St. John.

Cut Nails—Prices rule steady at former quotations. There is very little doing. We quote $2.30 per keg f.o.b. Montreal, Toronto, Hamilton and St. John.

Fence Staples—There is nothing new to report. Good orders are being booked at present for Spring shipment. Prices continue firm as follows: $3 per 100-lb gek for galvanized, and $2.80 for bright; 25 to 50-lb packages, 25c extra.

Pressed Spikes—The discount is 25 per cent.

Horseshoes—Trade is dead at present. Prices are as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c per keg extra f.o.b. Montreal only.

Horsenails—There is nothing doing at present. We quote: C brand, 40, 10 and 71-2 per cent. off list; other brands 55 to 57 1-2 per cent. off.

Screen Wire Cloth—The price is $1.50 per 100 square feet.

Galvanized Coil Spring Wire—Trade is very quiet this week. Prices are: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Carlots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in carlots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—Trade this week shows some further improvement. Prices are as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11 $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots 12 1-2c extra per 100 lbs will be charged.

Barb Wire—We again quote as follows: $2.75 per 100 lbs f.o.b. Montreal and $2.50 f.o.b. Cleveland. Carlots of 15 tons $2.40 f.o.b. Cleveland.

Smooth Steel Wire—There is only a moderate demand. Prices are as follows: Bright and annealed, $2.50 per 100 lb

f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb are now as follows: Coppered wire, 60c; tinned wire, $2; oiling, 10c; spring wire, $1.25; best steel wire, 75c; bright soft-drawn, 15c; hay-baling wire, 20 to 25c.

Annealed Hay Wire—Annealed hay wire and annealed and oiled wire are now sold at list prices plus the usual extras. As noted before this is equivalent to an advance of 25 cents per 100 lbs on hay wire.

Fine Steel Wire—There is only a moderate enquiry. The discount is 25 per cent, with net extras as follows: 1 and 2-lb hanks, 25c per 100-lbs; 1-2-lb hanks, 37 1-2c; 1-4-lb hanks, 50c.

Brass Wire—The market is quiet. The discount is 60 per cent.

Copper Wire—There is very little doing. The discount is 60 per cent.

Rivets and Burrs—There is a brisk demand at firm prices. We again quote the following discounts: Best iron rivets section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—"Rush" orders are numerous this week, but manufacturers state that they have large stocks on hand are are able to supply the demands of the trade without any delay. The discounts are still as follows: Carriage bolts common, ($1.00) list 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes 4c per lb off; nuts, hexagon, all sizes, 4 1-4c per lb off.

Washers, 45 per cent. off.

Screws—The demand is now becoming brisk as there is every indication that building operations this year will be extensive. The discounts are still as follows: Round head, bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head 80 per cent.

Cordage—Cotton rope has been advanced to 21c for good quantities, higher prices being charged for small lots. Prices throughout are firm. We quote: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; Russian tarred spunyarn, 13 1-2c; jute rope, 3-8-in in diameter and upwards, 9c; cotton rope, 21c; cotton twine, 24c for 3 and 4 ply. Cotton bedcord, 90c to $1.70, according to length. Sash cord 30 to 31 1-2c; cotton candle wick, 22 to 24c.

Building Paper—Trade is beginning to pick up this week having seen a considerable improvement in the demand. Our quotations are as follows: Tarred felt, $1.85 per 100 lb; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry sheathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c per roll.

Cement—We again quote: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel, ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—Trade is showing some slight improvement. Quotations are English, $16 to $22 per 1,000; Scotch, $17 to $22.

PLUMBING GOODS.

There is a still further improvement in the movement in plumbing supplies, and the market is active at steady prices. Lead pipe and soil pipe and fittings are in constant demand. In iron pipe the demand continues brisk and no quotable changes have been reported.

A good recipe for beginning a letter: "I saw your advertisement in Hardware and Metal."

Lead Pipe—The demand is still brisk, and prices are steady at 8c for composition and 7c for ordinary. The discount stays at 35 per cent.

Soil Pipe and Fittings—A good trade is in progress. The demand from Western houses continues good. We quote: Light soil pipe, 3 to 6-in, 50 and 10 per cent.; medium and extra heavy soil pipe, 2 to 6-in. 60 per cent.; extra heavy soil pipe, 8-in, 45 per cent. Light fittings, 2 to 6-in, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in, 60 and 5 per cent.; extra heavy fittings 8-in, 45 per cent.

Iron Pipe—Prices in all sizes are unchanged from last week. The market is active and steady. We quote as follows: Standard pipe, per 100 feet, in length under 19 feet—black, 1-8-in, $2.30; 1-4-in, $2.30; 3-8-in, $2.55; 1-2-in, $2.85; 3-4-in, $3.65; 1-in, $5.20; 1 1-4-in, $7.35; 1 1-2-in. $8.95; 2-in, $12.55. Galvanized—1-4-in, $3.20; 3-8-in, $3.45; 1-2-in, $3.90; 3-4-in, $5; 1-in. $7.20; 1 1-4in, $10.05; 1 1-2-in, $12.20; 2-in, $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.; and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in, $4.20; 3-4-in, $5.25; 1-in, $7.55; 1 1-4-in, $10.55; 1 1-2-in, $12.75; 2-in, $17.60. Galvanized—1-2-in, $5.25; 3-4-in, $6.65; 1-in, $9.55; 1 1-4-in, $13.25; 1 1-2-in, $16; 2-in, $21.90. The discount on all sizes of extra heavy pipe is 12-12 per cent.

Solder—A good steady demand keeps up. We quote: Bar solder, 18c; wire, 18 1-2c.

METALS.

The metal market is active and in fairly good condition. Wholesale houses are now booking orders for delivery at the opening of navigation, for both river and gulf ports. For some lines rush orders are being received and filled quite promptly. Shipments from Buffalo are coming forward more rapidly than last week though there is still great difficulty in securing deliveries. Still, considering the extent of the blockade at Buffalo the movement is as active as can be expected. In the country there is still a great deal of snow to obstruct traffic. Merchants from country points express surprise at the comparatively small depth of snow to be found about the towns. A few days more of the present mild weather will see Spring business at its height. The items showing quotable features in our list are pig tin, pig lead, scrap lead, machinery scrap and rubbers. Copper is still stiffening on the English and New York markets, with a sympathetic firming up of prices here, though there has been no quotable change. There has been something of a reaction in the tin market since last report, and this metal is quoted 1-2c higher this week. Pig lead has advanced from 5 to 10c.

Pig Iron—Importers are awaiting the opening of navigation for a resumption of active business. Orders continue fair for future delivery, and there is considerable confidence that further activity will characterize the market. Summerlee is quoted at last week's prices again, $20.25 to $20.75 per ton. No. 1 Middlesboro' iron is quoted for delivery at the opening of navigation, at $16 on wharf Montreal, and No. 2 at $15.50.

Bar Iron—Manufacturers deny all likelihood of a reduction in the price, but state, on the contrary, that if any change is made it will in all probability be an advance. As yet there is no change and we quote: Merchants' bar, $1.75; horseshoe iron, $2; forged iron, $1.95.

Black Sheets—There is an improvement in the demand this week. Trade is active. We again quote as follows: 28-gauge, $2.35; 26-gauge, $2.30; 22 to 24-gauge, $2.25; 19 to 20-gauge, $2.30, and 80 to 10-gauge, $2.40.

Steel—There has been no change. The demand is steady, and prices are as follows: Sleighshoes, $1.90; tire, $1.95 to $2.10; spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—A slightly better trade is reported this week. Prices are: Black Diamond, 8 to 9c; Sanderson's,

8 to 9c, according to the grade; Jessop's, 13c; Jonas & Colver's, 10 to 20c; "Air Hardening," 65c per lb; Conqueror, 7 1-4c.

Sheet Zinc—A moderate trade is doing on a basis of $6.15 to $6.25 for cask lots and $6.50 for smaller quantities.

Galvanized Iron—Orders for delivery after the opening of navigation still continue to arrive. Quotations are: 28-gauge, Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz, $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c extra.

Tinplates—There is a fair demand at steady prices. Cokes are worth $3.75 and charcoal tinplates $4.

Terne Plates—The price quoted is $6.75, though for shipment under the lower freight rates some concessions would be granted.

Ingot Tin—The position of tin has become much stronger, and dealers here are now quoting an advance over last week of 1-2c per lb, making the price 32 1-2 to 33c, in small lots.

Ingot Copper—Copper has been steadily advancing on the primary markets, but is not sufficiently higher to warrant any advance here. However, there is just about enough margin left to allow of the present prices being left stationery, and should there be any concessions given, which is thought doubtful, they would at least be but slight ones. Locally copper is quoted at 13 3-4 to 14c per lb.

Antimony—This is firm at 8c per lb.

Coil Chain—Chain continues to arrive from the other side. The demand this Spring has not been large. Our quotations are: No. 6, 10c; No. 5, 9c; No. 4, 8 1-2c; No. 3, 7c; 1-4-in, $6.10; 5-16-in, $4.70; 3-8-in, $4; 7-16-in, $3.80; 1-2-in, $3.70; 9-16-in, $3.55; 5-8-in, $3.35; 3-4-in, $3.30; 7-8-in, $3.25; and 1-in, $3.20 with 10c allowance on carlots.

Canada Plates—Prices are unchanged. Both locally and in the primary market the feeling is firm. We quote: 52s, $2.30; 60s, $2.40; 75s, $2.55; full polished, $3.60 and galvanized, $4 to $4.10; galvanized 60s, $4.25 to $4.35.

Pig Lead—Lead is higher this week, and very firm both on the primary markets and locally. We now quote: $3.40 to $3.50 according to quality.

Zinc Spelter—There is no change. We quote 6c.

Scrap Metals—There has been a better demand this week. A great deal of copper and brass has been going from Canada and the United States to England, and the price is slightly firmer. Lead is a little higher and firmer. There is nothing doing in wrought iron. Machinery scrap and cast iron scrap are scarce and firm. Rubbers are again lower, but this is usually expected at this time of year when new supplies come in. Our quotations are as follows: Heavy copper and wire, 10 1-2 to 11c per lb; light copper, 10c; heavy red brass, 10 to 10 1-4c; heavy yellow brass, 8 1-2c; light brass, 5 1-2c; lead, 2 3-4c; zinc, 2 3-4 to 3c; iron, No. 1 wrought, $10 to $12; machinery scrap, $15 to $16; stove plate, $12; mixed country rags, 65 to 75c per 100 lbs; old rubbers 5 1-2 to 6c per lb.

HIDES.

The hide market continues tame and uninteresting. The price advanced 1-2c on beef hides early in the week and 1c on calf skins. Normal conditions now rule as follows:

No. 1 beef hides	0 08 0 08½
No. 2 "	0 07 0 07½
No. 3 "	0 06 0 06½
Lambskins	0 75
No. 1 calfskins	0 11

ONTARIO MARKETS.

Office of HARDWARE AND METAL,
10 Front Street E.
Toronto, March 25, 1904.

WHOLESALE houses are in the midst of the rush of shipping Spring goods ordered months ago for March delivery. The effects of the freight blockade are still felt as orders for shipment on the first of March were kept to last week, which has thrown deliveries of later orders back several days. Orders are also now coming in freely for immediate shipment from stock, particularly such lines as spades and shovels, wringers and washing machines, screen doors and windows, screen wire cloth, spring hinges, horseshoes, horsenails, etc. Prices are steady throughout but without change.

Lawn Mowers—A nice trade is doing with prices steady at the following basis of prices: Woodyatt, 10 1-2 inch wheel, $8.50; Star, 9 inch, $7; Daisy, 8 inch, $5.75; Philadelphia, 7 1-2 inch, $7; Ontario, 7 1-2 inch, $15.80; King Edward, 12 inch, $9.50 (14-inch cut in aboee). D. Maxwell & Sons, 10 1-2 inch, $7.50 to $10; 9 inch, $5.50 to $6.25; 8 inch, $4.90 to $5.50. Discount 50 per cent.

Screen Doors—There is still some cutting, the quotations are nominally unchanged at these prices: Common, two or three panel, walnut, 4 inch, $6.50; yellow and green stained, $6.75; in natural colors oil finish, $8.75, with 20c less for 3-inch style.

Screen Wire Cloth—Prices are steady at $1.50.

Spring Hinges—An improved trade is reported with prices steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—A larger volume of business is reported. We quote: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c per 100 lbs extra charged.

Barb Wire—Trade is moving briskly. Our quotations are again as follows: $2.75 per 100 lbs f.o.b. Toronto, and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—The market is steady. We quote the following prices: No. 9, $2.70 per 100 lbs, freights equalized with factory points at Montreal, Hamilton, London, Welland or Walkerville and allowance to other points up to 25c; carlots, $2.65, freight allowance to 20c.

Wire Nails—An improvement in the demand reported with prices unchanged at $2.45 per keg, f.o.b. Toronto, with carlots $2.40.

Cut Nails—There is a fair trade, with prices steady at $2.30 per keg f.o.b. Toronto and Hamilton.

Spades and Shovels—Orders have been liberal but shipments small. There is now, however, a good movement. Prices are at the same basis as was quoted a year ago.

Horseshoes—A better trade is reported. Prices show no change. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c less.

Horsenails—Orders are coming in somewhat more liberally. We still quote discounts as follows: "C" brand, 40, 10 and 7 1-2 per cent.; other brands, 55 to 57 1-2 per cent.

Screws—A fair trade is doing. Prices are steady. We quote as follows: Flat head bright, 87 1-2 per cent. discount; round head bright, 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—An active demand continues at steady quotations, particularly in belting and coppered and tinned iron rivets. We again quote as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—The demand for small sizes is increasing, while the big enquiry for large sizes continues. Prices are steady: Carriage bolts, common $1 list), 3-16 and 1-4-inch, 60 per cent.; 5-16 and 3-8-inch, 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—A fair movement continues with prices steady. We quote: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; double shingleyarn, 11c; single shingleyarn, 10 1-2c; sashcord 'Hercules,' 30 to 33c; 'Star,'

We invite inquiries for

Steel Rails

BAR IRON, PIG IRON GALVANIZED IRON, CANADA PLATES, TINPLATES, WIRE ROPE (W. B. BROWN & CO.), CEMENT, FIRE BRICKS, ORE BAGS, GRAIN BAGS, ETC.

C.F. JACKSON & CO., Limited

Importers and Commission Merchants

151 Hastings St. W., VANCOUVER, B.C., and LIVERPOOL, ENGLAND.

36 to 38c; cotton rope, 3-16-inch and up, 20 1-2 to 22c; 5 32-inch, 25 to 27c; 1-8-inch, 25 to 28c; cotton twine, 3-ply, 23 to 24c; 4-ply, 27 1-2 to 28c; calking cotton, 16c; cotton waste, colored, 6 3-4c; white 10 to 12c.

Building Paper—Business is increasing. Prices are steady. We quote as follows: Tarred felt, $1.85 per 100 lbs; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry seathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c per roll.

Firebricks—Firebricks are quiet this week, but will find a ready sale as soon as the weather opens up. We quote English and Scotch, each, at 28 to 35c.

Cement—Very little change has taken place since last week. All the lines of railways are now perfectly opened up and freight is moving freely. A good demand is reported. We quote: Canadian Portland, $1.90 to $2.25; American Portland, $2 to $2.10 f.o.b. Toronto.

PLUMBING GOODS.

A good general sorting trade is reported. Manufacturers and supply houses are making preparations for a big business this year. Prices are likely to be well maintained.

Lead Pipe—A fairly good movement is recorded. We quote: Lead, 7c; lead waste pipe, 8c; discount 35 per cent.

Soil Pipe and Fittings—A moderate trade is reported at steady prices. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-inch pipe 40 and 5 per cent.

Iron Pipe Fittings—Business in this line continues to improve. We quote: Malleable fittings, 15 per cent.; cast iron (standard), 57 1-2 per cent.; headers (not standard), 52 1-2 per cent.; flanged unions, 52 1-2 per cent.; bushings and plugs, 57 1-2 per cent.; nipples up to 2-inches, 65 per cent.; 2 1-2 to 6-inch, inclusive, 60 per cent.

Copper Range Boilers—Trade in copper range boilers continues fair. Discounts at 15 per cent. continue.

Brass Goods—Trade is improving in brass goods. Valves and steam specialties are moving particularly well.

Iron Pipe—A good volume of trade is recorded. Prices show no change. We quote f.o.b. Toronto: 1-8-inch, $2.93; 1-4-inch, $2.07; 3-8-inch, $2.27; 1-2-inch, $2.51; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.88; 2-inch, $11.05; 2 1-2-inch, $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25.

METALS.

A general tendency towards a higher level is manifest this week. Canadian pig iron producers have taken advantage of last week's advance of 50 to 75c in the United States market to stiffen their prices here and while there is no difference in quotations there is much less

Latest Report on B.K. Morton & Co.'s

"B C" DRILL STEEL

From LE ROI MINING Co., Limited
ROSSLAND, B. C.,

Rossland, Sept. 7, 1903.

Messrs. B. K. MORTON & CO.,
Gentlemen:

I have great pleasure in stating that your **"B C" DRILL STEEL** has been in use in this mine for about one year, and has given entire satisfaction. In competition with American brands of steel it has more than held its own.

J. H. MACDONALD,
Foreman Blacksmith.

OPEN HEARTH STEEL

disposition to make concessions. Bar iron has also been strengthened by the higher values in the United States. Other ingot metals are also steady. A good seasonable demand, both from stock and for import, is reported.

Pig Iron—The advance made in the United States last week is well maintained and a comparatively large volume of business is reported in that market this week. Scotch iron warrants (Glasgow) have advanced 19s and Middlesboro' foundry iron 17s during the week. Consequently the Canadian market is decidedly stronger than it has been for some time. Stocks are not large and producers are refusing to make concessions formerly made. Quotations are still ranging from $18.50 to $19 for No. 1 and $18 to $18.50 for No. 2 f.o.b. Toronto; Midland $1.50 lower.

Bar iron—Prices continue to stiffen and the general quotation now is $1.80 f.o.b. Toronto. For extras as cut to length while rolling, 2 feet and over, 10c per 100 lb; 1 foot and under 2 feet, 15c; under 1 foot, 20c; over 20 feet by special agreement according to length and size.

Black Sheets—Orders for both import and stock are excellent. Prices are steady.

Canada Plates—Business is increasing in volume. Prices are unchanged, though firm. We quote as below: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—Prices in both the United States and Great Britain are higher. Quotations locally are firm but unchanged at 30 to 30 1-2c.

Galvanized Sheets—There is an excellent demand. Prices are steady throughout. Our quotations are as follows: Queen's Head, $4.25 for 28 gauge; American, $.4 for 28 gauge; Bell brand, $4.25 for 28 guage; Gordon Crown, $4.25 for 28 guage.

Tinplates—Prices are unchanged. A larger business from stock than for some time is now reported. Import business is also satisfactory. We quote: Coke plates, bright, 14x20, $3.50; charcoal plates, $4.25.

Copper—Advances on both the New York and London markets have been made and prices are consequently firm here. Locally there is considerable activity in both sheet and ingot and prices are steady. We quote: Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—A good demand for English lead is reported. Canadian lead is also in fair demand. Prices are steady. We quote $3.30 per 100 lb for pig lead and $3.65 for bar lead.

Zinc Spelter—A fair demand at 6 to 6 1-2c per lb.

Zinc Sheets—The market is firm and a fair business doing in small lots. We quote: Cask lots, $6.70 to $7, and part casks $7 to $7.25.

CANADA PAPER CO.

TORONTO LIMITED MONTREAL

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c, and wiping 17c.

Antimony—8c per lb.

Old Material—An advance of 1-4 to 1-2c is noted in heavy copper and wire, light copper, heavy red brass and heavy yellow brass. Most of the dealers thought that prices had reached about their lowest mark last week and in consequence there was a rush for stock which accounts for the above advance. A good demand is reported. We quote dealers' prices as follows: Heavy copper and wire, 10 3-4c per pound; light copper, 9 1-4c per pound; heavy red brass, 9 3-4c per lb; heavy yellow brass, 8 to 9c per lb; light brass 5 to 5 1-2c per lb; lead, $2.35 per cwt; scrap zinc 3 1-4c per lb; iron, No. 1 wrought, $10.50; No. 2 wrought, $4; machinery cast scrap, $14; stoveplate, $10; malleable and steel, $4; old rubbers, 5 1-2 to 6c per lb; country mixed rags, 50c per 100 lbs.

PETROLEUM.

The market is stationery and prices firm at the following figures: Canadian

prime white, 19c; Canadian water white 20c; American prime white, 19 1-2c; American water white, 21 1-2c, ex-warehouse.

Hides, Skins and Wool.

Business has changed little since last week. Trade is fairly good. A decline of 1c is noted in fleece wool. White tallow has dropped off ¼c per lb. We quote as follows:

HIDES.

No. 1 green, per lb	0 07½
" 2 " "	0 06½
" 1 " steers, per lb	0 07
" 2 " "	0 06

TORONTO MONTREAL WINNIPEG

NOVA SCOTIA MARKETS.

Halifax, March 21, 1904.

SHIPMENTS have been called for from a number of points on orders for Spring delivery, which would seem to indicate that merchants are hopeful of a good season's business. One customer in Prince Edward Island wrote to a wholesale firm in this city last week urging him to send his goods forward by the Pictou route and not to await the opening of navigation, as the fishermen were beginning to make enquiries and he wanted to get his stock in the store. Quite a large quantity of goods are being forwarded this season by the Winter steamers as the cost is only slightly greater than by direct boat from this city. Along the Western shore of Nova Scotia the harbors are now fairly free of ice but to the Eastward the blockade is still maintained.

* * *

In connection with the meeting of axe manufacturers held at St. John last week to consider steps to prevent the sale of United States axes on this market a leading Halifax jobber states that no very large quantities of American axes are now handled by dealers here. Some years ago he found it necessary to import American axes to meet the demands of his customers, but in late years he discontinued the practice. He does not believe the sales of United States axes are increasing and that so long as the home manufacturers produce as good an article as at present they need not worry over fair competition from any outside source. The makers fixed the price of axes for next Fall at practically last year's quotations.

* * *

Importations of cement have been heavy of late at this port. The "Loyalist" on her last trip brought 5,500 barrels, the greater part of which was despatched to Sydney. Business at the later place is now improving. The new works of the Dominion Iron & Steel Company are nearing completion and business generally is in better condition in the "Iron City" than it has been for many months.

* * *

A shipment of cable intended for the Eastern Telephone Co. at Sydney, C. B., was made from Chicago some months ago. It went astray and after a long search was located at Sydney, Australia, where it was being sold for what it would bring in order to pay transportation charges.

PITTSBURG METAL MARKET.

From The Iron Trade Review, March 24,1904

THE iron and steel market shows increased strength in all lines except plates, demand for the latter not increasing in proportion to the demand for other products, due to the fact that the railroads are not buying steel cars and to the falling off in the shipbuilding industry. While the buying of pig iron for delivery during the next two and three months on the part of the largest buyers in this district is practically at an end, the tonnage contracted for has been sufficiently large to stiffen prices for future as well as prompt deliveries, and iron and steel manufacturers generally are much encouraged over the outlook.

Pig Iron—All of the Valley furnaces are suffering from a shortage of coke, their stocks being entirely depleted and depending entirely on shipments from day to day. One stack has already been banked, and unless shipments materially improve before the end of the week further stacks will be compelled to shut down. The heavy buying for delivery the next two months is practically at an end, although small lots here and there are being purchased of both foundry and Bessemer. We note one sale of Bessemer for April delivery of 2,500 tons at $13.50 at the furnaces and another lot of the same tonnage for delivery through May was placed at $13.35. We also note the sale of 1,000 tons of No. 2 Foundry for delivery during the next three months at $13.85, Pittsburg, and 250 tons of forge at $13.50. Basic is held on the same basis as Bessemer and early deliveries are hard to secure. The general tone of the pig iron market is strong with a tendency towards further slight advances. Nearly all the Valley furnaces are behind on deliveries of March Bessemer iron to the United States Steel Corporation, and as the option has been granted to cancel all undelivered portions at the end of the month for delivery the previous month, it is believed that this option will be exercised due to the fact that during the months of April and May additional furnace capacity will be available among Steel Corporation companies. One of the Donora stacks at Donora, Pa., is about ready to blow in; while the second will be blown in in April. One new stack at Sharon and one furnace at Youngstown will also be available next month. We revise quotations as follows:

Bessemer, Valley	$13 35 to $13 50
Bessemer, Pittsburg	14 20 to 14 35
No. 1 Foundry	14 25 to 14 50
No. 2 Foundry	13 75 to 14 00
Gray forge, Pittsburg	13 25 to 13 50
Chilled basic, Valley	13 25 to 13 50
Chilled basic, Pittsburg	14 10 to 14 35

Bars—A slight change in the new clause inserted in steel bar contracts is now being considered by the manufacturers and will be adopted within a few days. The clause has been referred to elsewhere in this report. While buying of steel bars has not been heavy since the advance, consumers are specifying heavily and all the mills are operating in full. Iron bars are being held by several large producers at 1.45c, Pittsburg, but 1.40c, Pittsburg, is also

open-hearth, 1.40c; plow beams and cultivator beams, 1.35c, net; channels, angles, zees and tees, Bessemer, under quoted. We make the following quotations: Bessemer steel bars, 1.35c; 3 inches, 1.45c; common bar iron, 1.40c to 1.45c, Pittsburg; for Western delivery 1.35c, Pittsburg, is quoted plus freight to point of destination.

Sheets and Tin Plates—The reduction in wages in the sheet and tin plate trades allowed by the Almagamated Association are expected by the trade to be followed by slightly lower prices in both products. The wage reductions in both lines date from March 21, but if the vote now being taken of the tin and sheet lodges is against the reduction, a strike will be declared on April 2, the date when all returns are to be in, at all the mills that refuse to pay the scale of wages in force prior to March 21. In the tin plate trade a straight reduction of 20 per cent. was made, amounting to about 12 1-2 cents a box on 100-pound coke plates 29 and 30 gauges. In addition the base was reduced from $4.20 to $3.50, thus giving the association the advantage of the slightest advance that might be made over the prevailing price of tin plate which is $3.45 a box, f.o.b. nearest mill, Pittsburg district. In the sheet trade a straight reduction of 20 per cent. of the 1903-04 scale was made on steel sheets, which the American Sheet & Tin Plate Co. manufactures exclusively.

Wire and Wire Nails—Demand for wire and nails continues strong, the cut nail manufacturers receiving heavy orders owing to the disparity between the prices of wire nails and iron and steel cut nails. At the April meeting of the cut nail manufacturers a substantial advance is looked for. We make the following quotations: Wire nails, carload lots to jobbers f.o.b. cars Pittsburg, $1.90 base plain wire; carload lots $1.80 base; barb wire, carload lots, $2.20 base; staples, carload lots, $2.05 keg. Galvanized 30 cents extra. Carload lots to retailers are held at 5 cents advance in all lines, and on less than carload lots a further advance of 10 cents is charged. Steel and iron cut nails, carload lots, $1.70 and less than carload lots, $1.75 f.o.b. Pittsburg, plus freight to point of destination. Terms, 60 days, less 2 per cent. off in 10 days.

BUSINESS CONDITIONS IN BRITISH COLUMBIA.

By Regular Correspondent of HARDWARE AND METAL.

Vancouver, March, 19, 1904.

WITH building permits issued to date this year for a total of $275,000, and none of these for very large buildings, the prospects are that the coming season will be a very lively one. There are many more buildings in view than those for which permits have been issued, and as some of them are large blocks the aggregate will be large. Building Inspector Captain Geo. McSpadden says he believes the total for 1904 will reach $2,000,000 and that will not include the large amount of building done in the suburbs which are outside of his jurisdiction. Last year the total of buildings reached $1,500,000.

* * *

Very great activity marks all branches of industrial trade at the present time. Though the mills are having troubles of their own, the demand for lumber keeps up and the mills are turning out very large quantities every day. The local trade is, of course, the present largest demand, though the Northwest trade is beginning to open up. The proposal to form a selling pool for all lumber used in the city has not met with much favor, and the fact that one firm stands out is apparently blocking the scheme. It is not very likely, however, that a rate war will be precipitated, though that has been threatened. One of the millmen is credited with the statement that his firm had $20,000 to spend in forcing the formation of the selling pool. The contractors say they will stand with the mill which is staying out of the proposed pool and even if lumber prices are temporarily cut, as soon as they are restored, they would continue their support of that mill. The proposal, which virtually means that all orders should go to a central office, established by the pool, and be apportioned according to a percentage agreed on, has the effect of taking from the hands of any one mill its own trade, if the percentage set by the pool is less than what they have been getting in open trade. All the other mills are willing to go into the pool, because the particular mill referred to has been doing, it is said, at least 50 per cent. of the city trade for some time. The big objection the contractors have to the proposal is that it puts the mills out of the necessity of competition in quality, which has been the only competition possible, since the prices are the same at all.

* * *

While a great deal of attention is being attracted to the new Alsek diggings below White Horse, there is not the less great confidence in the Atlin camp, which is having very good Winter experiences on its creeks, where Winter work has been carried on. A letter received in the city this week from J. Roxborough, of Atlin, says: "It has been very cold here, sometimes 57 below. Boulder creek is doing all right. Seventy-five men are working. Black is doing well; 150 ounces a week for 25 men. F. Dockrell is taking out 15 ounces to one set of timbers. T. Reel, at bed rock, has just about as much gold as gravel. The camp is all right." Seeing that the above letter is to a private individual from a friend, and not by any means written with the idea of publication, it can be taken as fairly indicative of the results, on that one creek, at any rate. Though such returns as mentioned are perhaps larger than all realize, the average of the Atlin camp has during the Winter operations, been very satisfactory. Every report received from there has shown fair results. There has been more Winter Work there than usual, and nearly all operators working in the Winter are among the smaller miners, or single claim owners, who find the open season too short to pay them well enough, so they make arrangements to keep on right through the Winter. That there is a rush to the Alsek diggings, and that there is some guarantee for fair success and possibly for excellent returns as development goes forward, is evident from the persistent reports from there and from White Horse. "Hotel accommodation at White Horse will be severely taxed during the next few months," said Dr. F. W. Cane, postmaster of White Horse, to a Vancouver paper the other day, on his arrival from the north. The doctor is en route to his old homes in Toronto and Newmarket on a visit. "The influx of people will, if I am not much mistaken, continue through the Summer. Already there have been a great number of people at White Horse outfitting, and though many have gone on over the snow to the fields, the town is still filled with people from everywhere getting ready to go in before the Winter breaks up.

"The last reports received at White Horse from the diggings before I left were very encouraging. The prices asked and paid for claims on some of the creeks best prospected have risen from $100 to $150, until now they are quoted at $1,000 to $1,500. The Winter has been so severe in the north that operations have been difficult to carry on, but every case where bedrock was reached in testing the ground, there have been such good results that the owners are holding for bigger prices for their claims.

"The merchants of White Horse have stocked up heavily with all sorts of supplies, both in provisions and in hardware; in fact, everything the prospector or miner could require. The expectancy of a large trade is based very much on the amount of direct inquiry which has reached White Horse. That there is to be a big travel, is indicated by the amount of bookings in advance for passage on the various steamers to Skagway from British Columbia and Puget Sound ports.

* * *

Receipts of hardware stocks from the Old Country have been very heavy during the past two weeks. Following the arrival of the "Ping Suey" with large consignments for several wholesale houses here, and at Victoria the British ship "Hougomont" is discharging at Victoria from Liverpool, and will next week be in this port with cargo for Colin F. Jackson & Co., Evans, Coleman & Evans, Pilkington Bros. and other leading wholesale houses. Among the principal items of hardware staples ex "Hougoment" are as follows: Glass, 50 tons; tinplates, 700 cases; wire netting, 340 rolls; salt, 7,500 sacks, venetian red, 40 casks; oxide of iron, 50 casks; galvanized iron sheets, 810 bundles, 100 tons pig iron, 50 cases bath bricks, 46 cases and four casks ink;

creosote oil, chain, anvils, bicarbonate of soda, and various other smaller items.

* * *

Prices of staple lines here have not changed appreciably for some time. Inquiry among leading jobbers gives the same reply that there is no change to note.

Steel rails, 8, 10, 12 lb., short ton	$50 00

——

HARDWARE CONDITIONS IN MANITOBA

Office of HARDWARE AND METAL,
Room 308, McIntyre Block.
Winnipeg, March 24, 1904.

BUSINESS for the past week has been very bright and the prospects for another busy week is anticipated. The recent blizzard will undoubtedly cause some more blockades and delay freight shipments a little on the branch lines. Winnipeg's price list remains practically unchanged with the exception of glass, which the market quotes a little lower.

* * *

Another departmental store to be known as the Central Department Store, was opened in Winnipeg last week. Among other interesting features in connection is the accomodation for farmers provided by the proprietors in the way of stables and attendants for their horses.

* * *

The Gurney Stove & Range Co. has changed its name to the Tilden & Gurney Co., Limited.

Steel Feed Cookers For Earth Foundation.

A desirable addition to the business of stove dealers.

Many thousands of these are being bought yearly by the farmers and butchers.

Are you getting your share of the business? Perhaps you are not selling the right kind, or getting the right prices.

We have a modern Steel Feed Cooker, and will be glad to send you circulars and quote prices.

We sell to dealers only.

BARS NEEDED FOR COKE SHIPMENT.

Connellsville, Pa., March 21. — Coke production in the Connellsville and Masontown fields is showing marked increase and would increase still further in the event of sufficient and regular supply of cars. An adequate car supply means an almost full coke trade during the next few months, Of the 23,037 ovens in the region less than 5,000 are idle now as compared to an idle list of over 14,000 ovens in the closing months af last year. The record for February makes a gooh showing in comparison to the furnace report. The list of active ovens in the region increased during the month from ao active list of 16,916 to 17,551 ovens. The month's yield aggregated 848,571 tons as compared to 686,020 tons in the month of January, an increase for the month of 152,551 tons. The shipments amounted to 744,846 tons as compared to a shipment of 695,648 tons in January. The shipments from the Masontown field sent out a tonnage of 138,310 tons, as compared to 106,204 tons for January. The summary of the region for the past week shows 23,037 ovens in the region, with 18,221 ovens in blast, 3,816 ovens idle, an increase for the week of 250 ovens. Of the 84 active plants in the region, 71 plants, 17,075 ovens, made six days; 9 plants, 742 ovens, five days; 3 plants, 324 ovens, made four days, and 80 ovens, the Semet Solvay plant, made seven days, an average of 5,90 days as compared to 5.88 days the week previous.—New York Journal of Commerce.

PIG IRON PRODUCTION.

THE following table, from Bradstreets, gives the approximate production of pig iron in the world for two years past, the figures being reduced to metric tons for purposes of comparison :

	1902.	1903.	Increase
United States	18,003,448	18,297,400	293,952
Germany	8,402,660	10,085,634	1,682,974
Great Britain	8,653,976	8,686,901	32,725
Total	35,060,084	37,069,735	2,009,651
All other countries	9,497,907	9,625,000	127,093
Total	44,559,991	49,694,735	2,136,744

The following table gives by grades the total production of pig iron in the United States in 1902 and 1903, in gross tons of 2,240 pounds.

	1902.	1903.
Bessemer and low phos. pig iron	10,393 168	9,989,908
Basic pig iron made with min. fuel	2,038,590	2,040,726
Forge pig iron	833,093	783,016
Foundry and high silicon pig iron	3,851,276	4,409,023
Malleable Bessemer pig iron	311,458	473,781
White and mot. and other grades	180,741	120,137
Spiegeleisen	168,408	156,700
Ferromanganese	44,573	35,961
Total	17,821,307	18,009,252

AN ANTI-FOULING PAINT WHICH STOOD THE TEST.

IN many parts of Canada will be found a demand for anti-fouling paints for ships' bottoms. For this reason the experience of the Imperial Japanese gun boat "Chokai" is of much interest. This boat was selected at the Japanese naval station, Sasebo, for the purpose of applying Dampney's anti-fouling paint for ships' bottoms, and the following testimonial was given unsolicited on the result:

In order to make comparative tests of Dampney's and the other composition we have been using, coatings of each manufacture were applied the I. J. gunboat Chokai on August 16, 1902. The Chokai was docked on April 16, 1903, after having been on the Sasebo Navel Station during the interval, and the result of the test is as follows: In point, that seaweeds and barnacles do not attach. Dampney's Anti-fouling Paint is superior in quality to that of ——'s.

(Signed) SASEBO NAVEL STATION.

Sasebo, 18th day, 4th month, 36th year of Meiji.

Last year Henderson & Potts were appointed sole manufacturers in Canada and Newfoundland of Dampney's anti-corrosive and anti-fouling compositions for the bottoms of iron and steel ships. They were also appointed manufacturers of a boat-topping; also, for the interior of ships, of an anti-corrosive hold paint.

The firm of J. Dampney & Co., Cardiff and Liverpool, have long been one of the most progressive producers of compositions for ships' bottoms. The fact that they are contractors to the leading navies, as well as the largest steamship lines in the world, speaks volumes for their products.

Dampney & Co. have coated some ships as often as 17 times, and they have received, unsolicited, innumerable testimonials of which that quoted above is an example.

An illustration of the British cruiser "Sultez" is shown herewith, as a type of the vessels using this paint.

Since starting to manufacture in Canada, Henderson & Potts, Limited, have made large shipments to the Pacific Coast, West Indies, South American and Quebec docks, as well as looking after the Halifax trade. They will be pleased to furnish further information and send booklets to anyone desiring same.

The British Cruiser "Sultez."

MARITIME NAIL CO. TO RE-BUILD.

The Maritime Nail Company, whose works at St. John, N.B., were recently destroyed by fire, have decided to rebuild. Sydney is offering them some inducements to remove to that enterprising town, but it seems likely that the management will decide to rebuild in the old town. A representative of the Maritime Nail Co. in Montreal this week stated to Hardware and Metal that at the time of the fire they had the largest stock on hand in the history of their business. The fire was, therefore, a particularly heavy loss to them.

Wm. C. Hawkins, general manager of the Hamilton Cataract Power, Light and Traction Co., Limited, is calling for tenders for the construction of an enlargement of the hydraulic system of the company. The work embraces construction of dams, canals, bridge abutments, and highways.

PAINT, OIL AND BRUSH TRADES

Tests for Turpentine.

THE following turpentine tests, which may prove of interest to our readers were recently published in "Drugs, Oils, and Paints," U. S. A.: In a test tube (size 6 in. by $\frac{5}{8}$ in.) place about 10 c. c. of the turpentine to be tested, then add about 10 c. c. of C. P. sulphurous acid (not sulphuric), and shake four or five times until the two liquids are mixed. Set aside for twenty or thirty minutes to allow to separate, then observe the appearance and color of the two strata.

American Turpentine — Separation takes place very slowly. Upper stratum—Opaque; milky white color. Lower stratum—Translucent; milky white. Odor—Slight terpene smell.

Russian Turpentine — Quick separation. Upper stratum — Translucent; faint turbidity. Lower stratum—Clear and colorless. Odor—Slight pungent smell.

Pine Distillate (Dead Wood)—Medium slow separation. Upper stratum — Opaque; light buff color. Lower stratum—Translucent; yellow amber color. Odor—Distinct tar smell.

Pine Distilled (Live Wood)—Medium quick separation. Upper stratum — Translucent; lemon yellow color. Lower stratum—Clear and colorless. Odor — Mild tar smell.

Rossin Spirit—Medium slow separation. Upper stratum—Translucent; golden yellow color. Lower stratum — Translucent; creamy white color. Odor —Pungent resin smell.

Benzine (Petroleum Naphtha)—Quick separation. Upper stratum—Clear and colorless. Lower stratum—Clear and colorless. Odor—sulphurous gas smell.

Solvent Naphtha (Benzole) — Quick separation. Upper stratum—Slight turbidity; faint yellow color. Lower stratum—Clear and colorless. Odor—Benzole and sulphurous smell.

Note.—Pine distillate from stumps, dead wood, &c., if highly rectified, gives a reaction approaching that of the live wood distillate. The more the distillate is rectified the less turbidity and the more lemon yellow in color the reaction is.

For absolute results, the tests should be made alongside of liquids of known purity, at least during the first trial or until the experimenter is familiar with the color, reactions, odor, &c. The time of separation is as important as the color distinction.

Took His Discount.

"Hello!"

"Well?"

"Are you the credit clerk at Messrs. Tacks & Brads?"

"Yes."

"Can you tell me if Mr. Horsnales' credit is good?"

"He does not owe us anything. Paid cash for the last bill."

"Is that so; 2 per cent. or 5 per cent.?"

"Neither—70 per cent. He paid thirty cents on the dollar cash!"

Unsettled Turpentine Market.

Naval stores yesterday were more or less neglected, there being only a light demand for them, but plenty of sellers. Spirits turpentine ruled weak and unchanged at 61c asked, while the prices in Savanah was quoted at 57c. The spot supply of spirits was somewhat larger than during the week just past, and if there had been a heavier demand the possibility of buying large quantities at the prevailing price would have been greater. Buyers showed a disposition to hold off unless concessions were made, which holders were not in a hurry to do. Receipts in the South continue small as well as the volume of business. The stock in Savannah on Saturday was 5,603 barrels turpentine, against 2,116 barrels last year.—New York Journal of Commerce, Mar. 22.

"What Should a Paint Do?"

Secure the agency for Hollywood Brand, sell some of it to a few of your most particular customers and see how they will come back for more and recommend it to their neighbors.

Every tin of Hollywood sold is an advertising agent for your business. HOLLYWOOD PASTE, READY-MIXED AND FLOOR PAINT. Richer shades, larger covering capacity and greater durability than is to be obtained in any other paint. They wear on the job, not off it.

Paint and Oil Markets

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 25, 1904.

AFTER much wobbling so far as the volume of business is concerned the sagging tendency of the white lead and linseed oil market seems to have ceased. It is now predicted by paint and oil men that the coming two months will see an extraordinary spurt in the volume of business, not only in linseed oil and white lead but also in all general lines. It is expected that the increase of business will in a large measure make up for the serious loss experienced this season owing to the impossibility of making shipments. Orders are coming in now much more steadily and although payments are rather slow owing to the lack of communication it is felt that the general situation is much brighter. There are no special changes in price to note. We quote:

Ground White Lead—Best brands, ernment standard, $4.50; No. 1 Government standard, $4.50; No. 1 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead—$4.25 in casks, and in kegs $4.50.

Dry White Zinc—Pure dry, in casks, 6 1-4c; in 100-lb kegs, 6 3-4c; No. 1, zinc, in casks, 5 1-4c; in 100-lb kegs, 5 3-4c.

White Zinc—(ground in oil)—Pure, 25-lb irons, 8c; No. 1, 7c; No. 2, 6c.

Putty—We quote: Bulk, in barrels, $1.50; in 25-lb tins and irons, $1.85; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7c; 100-lb kegs, 7 1-4c; smaller quantities, 8 1-4c.

Red Leads—Genuine red lead, in casks, $4.25; in 100-lb kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks, $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge—Ground, casks, 5c; in less quantities, 5 1-2c; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 47 to 48c; 5 to 9 barrels, 46 to 47c; boiled, 1 to 4 barrels, 50 to 51c; 5 to 9 barrels, 49 to 50c. Delivered in Ontario between Montreal and Oshawa at 2c per gallon advance.

Turpentine—Single barrels, 91 1-2c; 2 to 4 barrels, 90 1-2c. Standard gallon of 8.6 pounds.

Shellac Varnish—Pure white, $2.75 to $3.50; pure orange, $2.65 to $3.40; No. 1 orange shellac, $2.35 to $2.50.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil—8 3-4 to 9 1-4c in wholesale lots, and 1-2c additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c; 25-lb drums, 15 1-4c; 1-lb packages, 16c; 1-2-lb packages, 18c; 1-lb tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c per lb; 25 lb drums, 15 1-2c; 1-lb paper boxes, 16c; 1-lb tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

Ontario.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, March 25, 1904.

White lead and turpentine are exciting general interest this week. Turpentine is expected to decline in some degree at this time of the year, when the new crop is about ready for the market. The anticipated reduction has taken place at the South and has been followed to some extent on this market. White lead continues firm, as prices of the lead in oil have been at almost the same level as that of the dry product and there is a general disposition to fix a price which would permit a fair price. Linseed oil is steady at unchanged figures. Other products are without change. A continued improvement in the demand is reported. We quote:

White Lead—Ex-Toronto, pure white lead, $4.65; No. 1, $4.20; No. 2, $3.90; No. 3, $3.50; No. 4, $3.25 in packages of 25 lb and upwards; 1-2c per lb extra will be charged for 12 1-2-lb packages; genuine dry white lead, in casks, $4.50.

Red Lead—Genuine in casks of 560 lb, $4.25; ditto, in kegs of 100 lb, $4.50; No. 1, in casks of 560 lb, $3.75 to $4; ditto, in kegs of 100 lb, $4.25.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c per gallon.

Paris White—90c to $1 per 100 lb.

Whiting—60 to 65c per 100 lb; Gilders' whiting, 75c.

Shellac—Pure orange, in barrels, $2.50 to $3; white, $2.50 per gallon; No. 1, $2.37 1-2, including price of can.

Linseed Oil—Raw, 1 to 2 bbls, 48c; boiled, 51c; 3 to 5 bbls, raw, 47c; boil-

A Reason or Two

Why every dealer should stock CHURCH'S COLD WATER

ALABASTINE

Because it has an established reputation—always working to the satisfaction of the user and possesses every advantage necessary or desirable in a material for wall tinting and decorating.

Because by a thorough system of advertising **everybody that reads** knows about **ALABASTINE,** and when in want of anything to fix up walls, calls for it as naturally as for any staple in the hardware, dry goods or grocery line.

Because of its convenience, and its permanent and sanitary features, Mr. M. B. Church, the original inventor of **ALABASTINE** and now President of this Company, was the first to produce a practical wall-coating adapted for use in **cold water,** a process that is patented in Canada and other countries, that has forced the manufacturers of hot water preparations, at the risk of patent infringements, to imitate his example.

ALABASTINE is for sale by Wholesale Hardware and Paint Dealers everywhere. Also by

THE ALABASTINE CO., Limited, PARIS, ONT.

ed, 50c; 6 to 9 bbls, raw, 46c; boiled, 49c; delivered, Toronto, Hamilton, London and Guelph. One firm is quoting raw, 1 to 4 bbls, 47c; boiled, 50c; 5 to 9 bbls, raw, 46c; boiled 49c; 10 bbls and over, open; ex-Toronto, 2 per cent. off 30 days.

Turpentine—Single bbls, 90c; 2 to 4 bbls, 89c; 5 bbls and over, open Toronto, Hamilton, London and Guelph, with 2c extra for delivery outside. One firm quotes: Single bbls, 91 1-2c; 2 to 4 bbls, 90 1-2c, delivered; 5 bbls and over, open, ex-Toronto with 2 per cent. off 30 days. For less quantities than barrels, 5c per gallon extra will be added, and for 5-gallon packages, 50c and 10-gallon packages, 80c will be charged.

Glues—Broken sheet, in 200-lb bbls, 8 to 8 1-2c per lb; cabinet glue, in bbls, 11 1-2 to 12c; emery glue, in bbls, 17c; bookbinders', ground, 10 1-2c; finest American, white, 19c; No. 1 American white, 15c per lb.

Putty—Common, $1.65; pure (linseed oil) bladders in barrels, $2; bladders, in 100-lb kegs, $2.25; bulk in barrels, $1.75; bulk, less than barrels and up to 100-lb, $2.

Plaster Paris—New Brunswick, $2 per bbl.

Liquid Paints—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

Barn Paints—65 to 70c per gallon.

Castor Oil—English, in cases, 7 1-2 to 8c per pound, and 8 1-2 to 9c for single tins.

English Paris Green — Petroleum bbls, 13 1-4c; arsenic kegs, 13 1-2c; 50 to 100-lb drums, 14c; 1-lb packages, 15c; 1-lb tins, 16c; 1-2-lb tins, 18c.

Canadian Paris Green (present delivery)—Petroleum bbls, 13 1-4c; arsenic kegs, 13 1-2c; 50 and 100-lb drums, 14c; 1-2-lb tins, 18c.

St. John.

This line shows no change here in price. As is usual at this season business in burning oil begins to drop off. Lubricating oils are actively pushed, as the chief season of business approaches. In paint oil business is quite active. Linseeds being very low. Turpentine still holds at the high price. Fish oils are in light supply.

Window Glass.

MONTREAL.

Prices remain steady at figures before quoted. There is not much business this week. We quote: First break 50 feet, $1.70; second break, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

An improvement in the demand from stock is reported and prices are steady. We quote: Star, first break at $3.10 per 100 feet and Double Diamond, first break, at $5.10. Discount 15 to 20 per cent.

How Stained Glass Windows Are Made.

THE twentieth century stained glass maker follows without important variation the simple methods of the French monk of eight centuries ago. The first requisite is the design. The artist makes a small water-color sketch to show the general design and color scheme, accompanying it with detailed studies. From this two large drawings or "cartoons" are made, the exact size of the desired window. One cartoon shows where the "leads" will be placed —the thin strips of lead, hollowed on both sides and looking in a transverse section like the letter H, which form the framework to bind the pieces of glass together. Another drawing gives the size and shape of each piece of glass. This cartoon is cut into its component pieces by a pair (or triplet) of three-bladed scissors, which leave between their parallel blades a space sufficient for the leads. These cut-out patterns are put together again on a large glass easel, to which they are attached by wax, and the spaces between are blacked in, to give the effect of the leads. The easel is then placed against a window where the light can stream through it. The artist or his substitute replaces each paper pattern on the easel by a piece of glass of exactly the same size, cut from a sheet of glass of the color called for by the color sketch. The sketch is not followed slavishly, experiment with the actual glass will suggest improvements. To a greater or less extent this stained glass is supplemented by painted glass, on which the colors are fired as in china painting. When all the pieces have been cut, they are transferred to the "leading" drawing; the flexible leads are twisted into shape and soldered at the joints, and a special cement applied to make the whole water-tight. The window is now complete, ready to be put in position, where it is made secure by copper wires fastened to the transverse bars of iron.—Booklover's Magazine.

BRANCH AT CALGARY, ALTA.

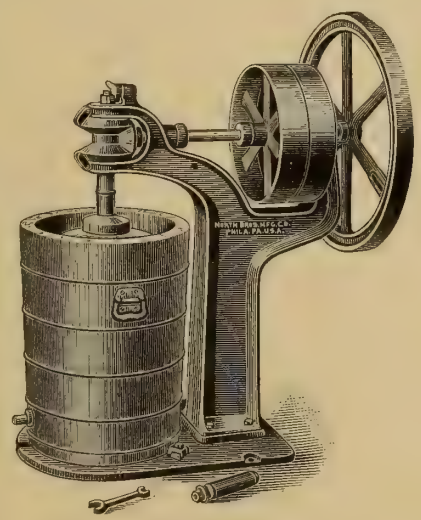
A NEW ICE CREAM FREEZER.

NORTH BROS. MFG. CO., Philadelphia, are this season offering the trade a new line of machine freezers just designed to meet demand for smaller-sized, well-built machines for confectioners whose business is not large enough to warrant putting in forty-quart machines, but who have power in use through electric motors, gas engines, etc., and thereby enabled to do away with the laborious work of operating their freezer by hand power.

The general design and mechanism for engaging gearing with dasher is same as in this firm's Combination Freezer, but the smaller size of machine, the omission of belt shifter, and no provision to use different size apparatus interchangeably, allows of much less price than the same sizes in their combination freezer, and puts a substantially built machine freezer of a small capacity within the reach of every confectioner using power.

The coupling to connect gearing to can has clutch at each end, one of which engages with clutch on lid of can and the other with clutch on lower bevel gear. The shaft of dasher passes through coupling and engages with upper gear. As the upper and lower bevel gears turn in opposite directions the can and dasher will do likewise. The clutches in gearing are operated by one small lever at top of machine.

In position shown in illustration, the gearing is engaged with can and dasher to operate freezer. When lever is thrown in opposite position the clutches are separated so that tub with can and dasher may be readily removed. The lever locks the clutch in either position. The arrangement of parts is such that the gearing is never exposed at any time, not even during the change of tubs and cans. The cover prevents any possible injury to operator, or the gearing becoming clogged with dirt or ice and salt. There are no loose pieces to be lost or mislaid. The machine is very compact and of great strength. The frame is in one piece and all bearings are accurately bored.



The can is made of No. 18 sheet steel, riveted in seam, with heavy malleable iron bottom, and tinned after being made up. The top of can is reinforced with wrought iron band. The body of can is very much thicker than the ordinary can made of the heaviest tinplate, and cannot be dented by careless use, or by ice in packing.

The tub is made extra heavy of selected Virginia white cedar, with staves tongued and grooved into each other, and held together with electric welded wire hoops, which are much stronger than ordinary flat hoops and guaranteed not to fall off. The tubs are painted both inside and outside.

The dasher is of malleable iron, heavily coated with pure block tin. It has two metal scrapers for side of can and one scraper for bottom of can.

The most careful attention has been given to every detail, not only in design, but superior and accurate workmanship, and the use of the very best quality of all materials used in their construction. Terms on application.

THE EFFECTIVENESS OF COURTESY.

Three qualities are necessary to the perfect salesman: politeness, honesty, quickness, says John E. Baker. Even if a clerk is honest and polite I am willing to give him a trial. Politeness costs nothing, but is worth everything. Even the customer who is always kicking about prices should be well treated, for he really needs our sympathy. Take care of the children, because the impressions made on the childish mind remain throughout the whole life, and the children may be drawn to you or driven from you by your treatment. Travelling salesmen should be treated with courtesy, and your decision should be made known to them promptly in order that they may waste no time if there is not going to be a sale. We endeavor to so influence all who come to our place that when again in need of anything in our line they will come to us.

STOVES AND TINWARE.

American Tin Plate Mills.

THE present arrangement as to scale of wages which the American Sheet and Tin Plate Company have with their workmen in the union tin-plate mills expires on July 1, and as a precaution against a possible strike the big concern and other independent plants as well are accumulating very large stocks, in order to be well fortified in case a tie-up should occur on the above date. For some time past some of the independent tin-plate mills have been agitating with the Amalgamated Association the question of a reduction in wages in union tin-plate mills, but their request has been refused, the association declining to take up the question of lower wages in tin-plate mills before the present scale expires on July 1 next. It is stated on good authority that the union tin-plate mills will demand from the Amalgamated Association a material reduction in wages of tin-plate workers from present scale. Since the present scale was made the price of tin-plate has suffered a decline, and, in addition, heavy reductions in wages have been made in the sheet mill scale, both in union and non-union mills, and general reduction in wages have been made in all other classes of labor. Many of the important plants of the American Sheet and Tin-Plate Company are operated as non-union mills, and in the event of a strike this concern would probably not be very seriously inconvenienced.

As American tin-plates are now being sold in Canada in direct competition with Welsh, the above may be of interest to Canadian buyers.

Some Don'ts for Stove Dealers.

By Damper Rod.

Don't speak ill of a competitor.

Don't advertise in a perfunctory manner.

Don't fail to be explicit in ordering repairs.

Don't forget that stove polish is a good salesman.

Don't bite on everything new that comes along.

Don't try to carry orders for repairs in your head.

Don't attempt to carry too many lines; select a good one and stick to it.

Don't sell stoves that are difficult to repair; stove repairs, like chickens and curses, come home to roost.

Don't guarantee a small stove to do the work of a large one.

Don't expect a stove to work as well before it is paid for as after; it seldom does.

Don't guarantee a range to bake well if connected with a short chimney; it may not.

Don't use smoke pipe that is too small; better too large.

Don't trust a customer, or other inexperienced person, to put up a new stove, if possible to avoid it.

Don't undertake to get stoves delivered without sufficient help; if broken in handling you will have the expense of repairing and probably a dissatisfied customer.

Don't urge a woman to buy a stove she does not like the looks of; if she takes it, it will never be perfectly satisfactory.

Don't try to convince a prospective purchaser that he or she is prejudiced for or against any particular kind of stove.

Don't expect to do all the business done in your line nor claim that you do it all.

Don't get the idea that dust and dirt will be overlooked in your place because it is a stove store.

Don't condemn without a hearing a range that does not bake well on the bottom; it may "talk" when connected with another chimney.

Don't forget that a few ashes spread over the top oven-plate of the range will improve its baking.

Don't overlook the fact that a stove must have sufficient draft to work saisfactorily, and that the chimney and not the stove must furnish the draft.

Don't allow stoves to be taken out of the store until they are looked over carefully; filing and fitting after a stove is delivered arouses an unpleasant suspicion in the mind of the housewife.

Don't be "penny wise and pound foolish" in the matter of tools and appliances to work with.

Don't expect the stove repair branch of your business to run itself; it won't.

Don't have too many prices; the adoption of this rule will save you considerable annoyance and promote confidence in the justness of your prices.

Don't leave your store in charge of one who has not a practical knowledge of the goods; a customer wants and expects intelligent attention.

Don't forget that the average man or woman is more stupid regarding the needs, uses and general make-up of a stove than upon almost any other subject.—The Metal Worker.

Universal Bread Maker.

An American manufacturing concern are offering through the jobbing houses a break maker which is new to the Canadian market. It consists of a tin pail with cover and automatic device for kneading the dough. The mixture is placed in this pail and by turning a crank at the top it may be kneaded much more quickly than by hand.

HEATING AND PLUMBING

ARCHITECTS' FIELD INVADED.

THE indications are that in New York the so-called interior decorator may supplant the architect to some degree in the planning of the most costly private residences. And New York sets the fashion in these matters for the continent. A large firm of interior decorators were commissioned recently to supervise the erection of the new residence of one of the steel trust magnates. In this particular case, an architect drew the plans but it is rumored in professional circles that the decorators controlled largely the design of the structure, seeing that its interior construction should be adaptable to the decorations to be used in the various rooms.

"Architects who cater chiefly to private individuals who contemplate erecting palatial residences are not a little exercised over the situation," said a representative New York architect recently. "It is generally known that another millionaire who recently acquired a valuable piece of property on Fifth avenue is about ot start work on the erection of a new house. It is also known that this owner invited the leading firms of architects in New York to enter into a competition to draw plans for the structure. None of these was accepted, and it is reported that he secured plans in Paris last Summer.

"On his return to the United States, he took these plants to a Fifth avenue decorator and told him to superintend the building of the house. In other words, all the changes that may be made all the amendments to the specifications that may become necessary as the work progresses, and all the thousand and one details which always arise during the construction of a house of this character will be left very largely to the judgment of a man familiar with the value of antiques and tapestries."

The foregoing may or may not indicate an important change which will be of some importance to the architects.

Thermit Welding.

THIS process is described in the Journal of the Society of Arts for February 13. Its application to welding pipes is given by the Plumbers' Review as follows :

In the case of a weld in a pipe, or in an angle iron, it is probably desirable that the body of the weld shall, when finished, be identical in section with the rest of the material, so that on no account must any iron produced by the action of the thermit remain adherent. If this is the object, a simple mould is placed around the pipe or bar to be welded, leaving a space which experience has found to be suitable, the two ends are securely held in position by means of clamps, so that when desired a considerable pressure can be exercised between them. Then, when all is ready the charge of thermit in the crucible, the amount of which for each section is known to a nicety and is tabulated, is ignited, and as soon as the fluid has become quiet, it is poured into the mould. As it is difficult to see the mould in consequence of the glare from the crucible, it is desirable just to splash a little alumina as near as can be judged into the mould, when at once the glare from this will make the opening into the mould easily seen, and the rest of the mixture can be gently and gradually poured in. Now, in this operation, the alumina going first immediately chills in contact with the cool metal, thus forming a protecting layer, which prevents the iron that follows from damaging or adhering to the bar. The heat of the mixture—again iron below and alumina above—quickly heats up the bar or tube to the welding point, and if the space below, where the iron is, has been properly proportioned and a proper quantity of thermit has been taken, the temperature of the bar or tube will reach the melting point. After a time, varying from one minute to three or four, according to size and thickness, it is merely necessary to exert pressure by means of the clamps and the weld is complete. Immediately—that is, while still white hot—the mould is removed, and the hot iron and alumina are knocked away when there is nothing more to be done but to leave it to cool.

Building Notes.

A new Masonic building is being erected in Tillsonburg, Ont.

Wm. Quey is going to build a hotel at Rainy River to cost $50,000.

A new hotel will be built in Clinton, Ont., S. S. Cooper has the contract.

A new brick block will be erected by H. Sandison on Main street, Winnipeg.

Vancouver is scarce of houses and contractors are already stocked with contracts.

The University of Ottawa recently destroyed by fire, will be rebuilt as soon as the weather permits.

A school house is to be erected near Saskatoon, N.W.T. Frank Kailes, secretary, Saskatoon, has called for tenders.

Jas. Johnston, proprietor of the European Hotel, Guelph, Ont., is going to remodel that hotel at a cost of $15,000 to $25,000.

Adams & Co., wholesale leather dealers, Toronto, propose to erect a new four storey brick warehouse in Winnipeg in the near future.

Plans have been decided upon for the new club house which the Montreal Amateur Athletic Association will erect on Peel street, Montreal.

The Scott Furniture Co., retail furniture dealers, Winnipeg, have prepared plans for the erection of a six storey brick and stone building adjoining their present building.

Work is progressing somewhat slowly on the Union Bank skyscraper at Winnipeg. This is owing to the delay in the shipments of materials from the Dominion Bridge Co., Montreal, because of the blockaded roads.

The Cement Building Block Co., Limited, Winnipeg, have been awarded the contract for supplying material for the construction of the large warehouse of McColl Bros. & Co., of that city. This is one of a number of large contracts already let in Winnipeg where cement block will be used in building this season.

Wm. Davies Co., a one-storey brick store on the corner of Broadview avenue and Gerrard street, to cost $3,500.

Thos. Fussell, a pair of semi-detached two and one-half-storey brick dwellings on Poplar Plains road, to cost $3,600.

H. M. Deeth, a pair of semi-detached two storey dwellings on the corner of Hepbourne and Concord streets, to cost $2,000.

The North American Land Co., two pairs of semi-detached two-storey and attic brick dwellings on Manning avenue, to cost $6,000.

MONTREAL.

Jos. Fabien, 494 Charlevoix, for alterations to 336 Centre to cost $1,500.

Louis Lafayette, 999 St. Andrew, for alterations to 995-999 St. Andrew, to cost $2,200.

J. S. Prince, 33 St. Lawrence, for alterations to 1881 St. Catherine, to cost $2,000.

A. Belanger, Centre and Ropery, for alterations to houses on same strees, to cost $5,000.

C. Lavigne, 2316 Norte Dame street, for alterations to 2316 Norte Dame, to cost $3,400.

Nap. Belanger, 82 Chambord, to erect on Breboeuf street, a two-storey third-class house, dimensions 25x41 1-2, to cost $1,950.

Francis Casey, 431 Champlain, for alterations to 421 Champlain, to cost $1,500; also to 425 Champlain, to cost $1,500.

Thos. Quintal, Centre and Charlevoiz, to erect on Charlevoix, a two-storey third-class house, dimensions 26x100, to cost $4,500.

Alphonse Rochon, 1662 St. Hubert, to erect on St. Hubert, a one-storey third-class house, dimensions 25x30, to cost $1,000.

Patrick Dunn, 403 Aylivin, to erect on Aylivin a three-storey third-class house forming three dwellings, dimensions 25x35, to cost $2,500.

Jos. Baucher, 1305 Sauguinet, to erect on Drolet two two-storey second-class houses, dimensions 33x33 each, forming two dwellings, to cost $1,800 each.

Mrs. V. Maranaille, 777 Papineau avenue, to erect on Gain street, a two-storey third-class house forming two dwellings, dimensions 25x45, to cost $2,500.

A. Belanger, Centre and Ropery streets, to erect on same streets two three-storey third-class houses each forming three dwellings, dimensions of each 50x36, to cost $3,000 each.

Camille Legault, 203 Park avenue, to erect on the corner of Prince Arthur and Park avenue, three three-storey second-class houses, forming two dwellings, dimensions 53x104, to cost $1,500 each.

Slag Roofing for Flat Roofs.

More or less enquiry has recently been made with regard to the laying of slag roofs, and as bearing upon the subject we take pleasure in presenting herewith some extracts from "Specifications for Slag Roofing for Flat Roofs," taken from a recent issue of a little publication issued quarterly, under the name of Headquarters:

"Make the first course next the walls or eaves of full five thicknesses or layers of felt. Then lap each successive layer at least two-thirds of its width over the preceding layer, firmly securing the felt with tins or cleats nailed on in the manner customary to the best composition roofing, and thoroughly mop the surface underneath the outer layer of the first course and underneath each succeeding layer, as far back as the edge of the next lap, with a coating of hot coal tar pitch, in no case applied hot enough to injure the woolly fiber of the felt.

"The quantity of felt to be used per 100 square feet of roofing to be not less than 70 pounds.

"Over the entire surface of the felt thus applied spread a good, heavy coating of hot coal tar pitch, heated as before specified, and completely cover the same with a coat of slag, granulated and bolted for the purpose, using no slag larger than that which will pass through a 5-8-inch mesh, and none smaller than that which will be caught by a 1-4-inch mesh. The slag to be free from sand, dust and dirt, and applied perfectly dry and while the pitch is hot."

A Test of "Uralite."

Another series of tests has been carried out to prove the efficiency of "Uralite." This took place a few days ago at the cement works of Messrs. Currie & Co., Limited, Cathcart street, Kingston, Glasgow. The test was carried out with a platform constructed of timber, partly covered with "Uralite" and partly left bare, and there was a timber structure on both sides covered with "Uralite"; and a wooden box covered internally and externally was fixed on an iron frame and placed in the midst of the fire. The fire burned for an hour fiercely, and registered a temperature of 2,000 degrees F. by a pyrometer. The unprotected portion of the platform was destroyed in about fourteen minutes; that protected by "Uralite" remained standing, and was able to carry the weight of a man upon it after the fire was subdued.

Metallic Window Screen.

The metallic window screen advertised by C. M. Cutts & Co., Toronto Junction, is winning the widespread attention which it deserves. The hardware trade have found in it a line that can be handled to good advantage, its taking point being its strength which, it is claimed, more than offsets its greater cost than the wooden. The standard frames are in black and galvanized, but special finishes such as old copper, brass, nickle plated and tinned can be had on request. The complete screens are packed one dozen in a crate and knock down screens with wood ends six dozen in a crate. Any further information will be supplied on request.

H. BOKER & CO.'S "KING CUTTER" RAZORS.

There is an effort being made by the manufacturer to get the Canadian retailer to offer for sale "King Cutter" razors not lower than $2 each. It is well for the retailer to adopt this at once, as it is clearly in his own interest to get as good a profit as possible on good standard goods, and $2 is not too high a price for the "King Cutter" razor.

"SHIELD BRAND" SHEATHING

TARRED or DRY.

For Lining—Houses, Barns and Stables. Extra strong, full weight, best quality. When ordering from your dealer DEMAND the "Shield Brand." It's a quick seller.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

THE John Murphy Co., Montreal, have been incorporated with a capital of $450,000, to acquire the dry goods business of John Murphy & Co., Montreal. The directors are John Murphy, H. Henry, both of Montreal, and S. Gamble, Ottawa.

The Guelph Herald says that the Mayor of Guelph has received a communication from W. J. Green, Toronto, stating that a certain company are desirous of establishing a large factory in Guelph for the manufacture of high grade metal work. The proposed plant would cost about $100,000. The city Council have the proposition under consideration.

Southam, Limited, Hamilton, Ont., have been incorporated with a capital of $1,000,000, to carry on business as proprietors and publishers of newspapers, journals, magazines and books in Hamilton and Ottawa. The directors are Wm. Southam, Hamilton; F. M. Southam, Montreal; Wm. Southam and H. S. Southam, both of Ottawa; and R. Southam, Toronto.

The Arlington Company, of Canada, Toronto, have been incorporated with a capital of $40,000 to take over the business of A. B. Mitchell, manufacturer of rubberine collars and cuffs. The directors are E. W. Crane, Newark, U. S.A.; C. B. Chapman, Borough of Glen Ridge, U.S.A.; A. B. Mitchell and W. D. Mitchell, both of Toronto, and E. Schultz, Arlington, U.S.A.

Wm. Whyte, of Winnipeg, 2nd vice-president of the C. P. R., says that he looks for an almost unbroken period of railway building during the ten years to come. The immense strides which the country has made during the past few years, opening up as it has any amount of new territory, has rendered necessary a much more complete railway service.

T. Langton, general merchant, Lourville, has advertised his business for sale.

The Murray and Gregory saw mill, St. John, N.B., is nearing completion. The mill will be in running order by May, at which time the first logs of the season will arrive. It is claimed that the new mill will be the most up-to-date sawmill in New Brunswick. The capacity of the mill per day of 9 hours will be 75,00 feet of log lumber, 25,000 shingles, 6,000 to 8,000 pieces of clapboard, 40,000 laths and 25,000 staves and headings.

Notes.

A strike of 30 feet of ore of smelting value has been made on the 850-foot level of the White Bear mine, Rossland, B.C.

Alex. Dick, general sales manager of the Dominion Coal Co., expects to see busy times in the Nova Soctia colleries this year.

The Keewatin Flour Mills Company, incorporated under the laws of the Dominion of Canada, have been granted a license to carry on their business in Ontario.

Five Winnipeg capitalists propose to erect a large lumber mill in Vancouver, B.C., and ship the product to their own yards in Winnipeg. They are putting $160,000 capital into the project.

A new sawmill is in course of construction in Victoria, B.C., with a capacity of 20,000 feet of lumber per day. It is being constructed by Lemon, Gonnason & Co., and will be completed by June.

W. Bailey & Co., broom manufacturers, whose factory at Kingston, Ont., was recently burned down, have started to negotiate with Niagara Falls, Ont., concerning the establishment of a factory there.

The Council of North Sydney have offered Maritime Nail Works, on the consideration that they rebuild their plant in Sydney, a free site, a cash bonus, free water and exemption from taxation for 20 years.

The Londonderry Iron Mines, Colchester County, N.S., are sending an exhibit of iron ore to the St. Louis Exhibition. The Intercolonial Coal Mining Co. are also sending exhibits of coal from the Drummond colliery, Westville, N.S.

La Compagnie de Progres du Canada, Montreal, have been incorporated with a capital of $10,000 to carry on a general trade and commerce. The directors are A. Chabot, M. Paquette, E. Noel, Chas. Qebel, and A. Beaupre, all of Montreal.

Dominion Introduction Company, Montreal, have been incorporated with a capital of 49,000, to carry on the business of manufacturers, manufacturers' agents and commission merchants with the right to manufacture merchandise of every description.

St. Raymond Paper Co., Montreal, have been incorporated with a capital of $500,000, to manufacture and deal in wood, wood pulp and paper and articles manufactured from them. The directors are T. M. McCaw, J. Adair, M. P. Buchanan, F. T. Enright and B. M. Murison, all of Montreal.

The Force Food Company incorporated under the laws of the United States, have been granted a license to manufacture and deal in "Force" food in Ontario, provided that in so doing the company do not use a larger capital than $100,000.

Inter-Ocean Land Company, Toronto, have been incorporated with a capital of $100,000, to carry on the business of a land company. The directors are J. H. Willoughby, Saskatoon, N.W.T.; J. H. Scott, F. A. Clarry, P. Ryan, J. I. Davidson and A. F. Webster, all of Toronto.

George Foster & Sons, Brantford, Ont., have been incorporated with a capital of $100,000, to manufacture and deal in groceries, provisions, drugs and chemicals. The directors are F. M. Foster, A. G. Olive, J. Ruddy, E. Sweet, and M. H. Robertson, all of Brantford.

A new sawmill has just commenced operations at Hawkesville, Ont. The mill is operated by the McAllister Co. The 50 horse-power engine was manufactured by Leonard & Sons, London, and the boiler also was made by the same firm. The 5-foot saw came from the Waterous Co., of Brantford.

A report has gone the round that the Saginaw Lumber & Salt Co. had found it necessary to rebuild their mill at Sandwich, Ont., owing to its settling. This is absolutely in error, as may be judged from the fact that the mill ran night and day last year and expect to do the same this year.

It is reported that a very rich strike in high-grade copper ore has been made on Vancouver Island by R. Herd, prospector. The situation of the strike is very close to the Tyee Copper Company's smelter. Samples of the ore tested yielded $80 per ton in copper, $3 in gold and $1.50 in silver.

Paterson's Wire Edged Ready Roofing

has successfully stood the test of Canada's variable climate for over twenty years, and is the only popular substitute for shingles.

We are advertising the above Roofing extensively in the "Farmers' Magazines" and in all cases we ask prospective customers to order our goods from their local Hardware Merchants.

There will be a very large quantity of our Ready Roofing sold in the future, and you can't blame us if you don't get your share of that trade.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

WHY sell Old Style Cork Screws?

The People Want

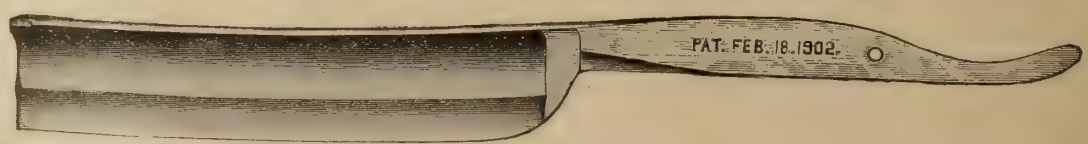
WALKER'S SELF-PULLING

which draws the cork, cuts the wire, removes crown, seal and aluminum stopper. Does the whole thing. Each one tested and guaranteed. We manufacture over 50 different styles.

ERIE SPECIALTY COMPANY, Erie, Pa., U.S.A.

EVOLUTION IN RAZOR GRINDING.

English full hollow ground.



German full concaved.

THE AMERICAN DOUBLE HOLLOW.

Have you ever seen a razor too good to be used on your face?

The old-fashioned way to grind a razor was the English full hollow, but it was found that, if ground thick, it was harsh on the face, if very thin it would vibrate [illegible] shave clean.

About 30 years ago a new style of grinding was invented, the German full concaved; this was found better; it had only one fault, being thick above the edge it cannot easily be kept sharp on a strop, you have to hone it very often. We are making a newly Patented Razor, the American Double Hollow, which has twodistinct hollows. This razor, if properly used on a strop, practically never needs honing, because it is so thin above the edge. Try it and you will be more than pleased.

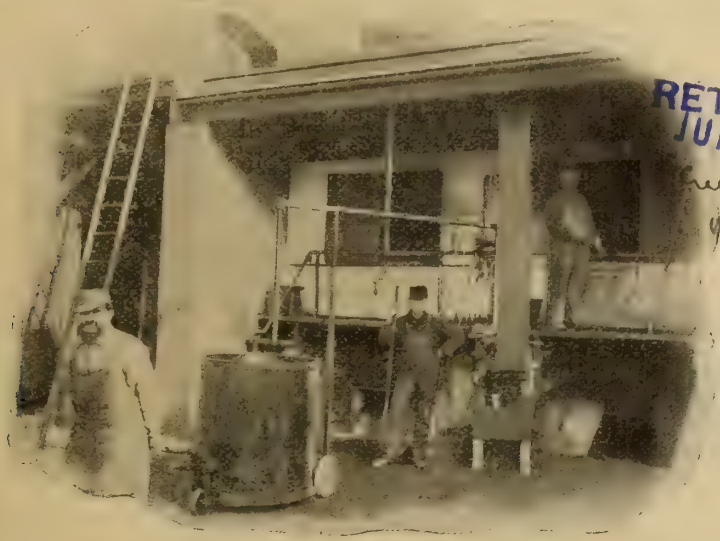
KEMP MANUFACTURING CO., TORONTO, CANADA.

The Manufacture of Varnish and Japans.

The Process Employed by Berry Bros., Walkerville and Detroit.

(Continued from last week.)

NEXT to the quality and adaptability of the goods, it will be generally conceded among consumers that the most important requisite in a varnish is "uniformity" of quality; and it is in this respect that a large tankage capacity gives an advantage over smaller manufacturers. Although in the manufacture of several lots of varnish, the same formula may be used, and the same "modus operandi" adopted throughout, there is still one essential feature that must be observed to insure absolute uniformity, so far as human means will permit, and that is the time allowed for the ripening process. This is something that cannot be hurried; and the results obtained while the varnish is remaining in the tank undergoing the mysterious process of "ripening" cannot be produced by any artificial means so far discovered.



Boiling the Linseed Oil.

The proper time for ripening is from three to twelve months, according to the grade of varnish, so that it will be easily seen that to allow the varnish full time to ripen, and at the same time keep a supply of "ripe" varnish on hand, sufficiently large to fill all orders and to meet emergencies, demands a very extensive storage capacity, and a poor equipment in this regard must necessarily prove disastrous to the production of uniform goods, a limited storage capacity compelling varnish manufacturers to either ship unripe varnish, or to refuse orders, or delay shipment until the stock ripens.

Varnish carefully and correctly made from a tested and approved formula is only half complete, and if not given the proper time to mature before shipping, will in all probability be condemned by the consumer to whom it may be shipped.

Varnish is frequently blamed for trouble which is really the result of carelessness on the part of the workmen. This will show that the trade should realize the great care taken by the manufacturers in the production of varnish. Nothing is done by guess work. Scientific rules govern throughout. Raw material and finished product are submitted to laboratory tests, safe and sure precedents have succeeded the era of experimental uncertainties, and barring accidents the manufacturers know when starting to make a tank of varnish what the result will be beyond question.

The term "Japan" was originally given to the species of varnish producing that rich, black, glossy finish that had its origin in Japan. That secretive race, however, no longer possess the monopoly of the art of japanning, as we have long since solved its mysteries, and produce Japans as lustrous and durable as were ever made by the Japanese.

The word Japan has now a double commercial meaning, and may be roughly divided into two heads: Oil drying Japans and finishing Japans, the former being used by painters for drying paints, and the latter for producing a finish on iron, wood and other surfaces.

Finishing Japans consist of two classes: Air drying Japans and baking Japans. Black is the color in most general use, although colored Japans are frequently used for various ornamental purposes. Sewing machine castings, small hardware, tea trays, wooden handles, and many other articles of this nature are among the things that owe their brilliancy and finish to Japan.

The finest results are obtained with the baking Japans, the finish produced being more brilliant and durable than can be obtained with the air drying Japans.

The characteristics of good finishing Japans are brilliancy and durability, and freedom from any undue tendency to mar, chip or scratch.

In common with varnishes, there are many outside influences that conspire against Japan. Like varnish, Japans are susceptible to changes of temperature and should be kept and used in a warm room, never allowed to get chilled, or used in any other but its normal consistency.

Tank Room for Varnishes.

The operation of baking is one requiring great care. The heat must be carefully regulated, and the conditions and capabilities of the oven and sur-

roundings carefully considered. A too high degree of heat, improper ventilation of oven, and many other causes are

RETURNED

sufficient to spoil the best baking Japan ever made.

The same may be said of brown baking Japans, which are very largely used for

TREATMENT OF COMMERCIAL TRAVELLERS.

THE man who does not treat a travelling salesman who calls upon him with courtesy and rerpect, is a twin brother to the animal which Balaam rode, and is out of place as a buyer, remarks an exchange. He has missed his calling and some manure fork is pining away in lonesomeness without the unfriendly grasp of his withered hand. He is not a good man for the firm; he misrepresents as a buyer or proprietor; he is going through the world missing the honest, friendly grasp of hundreds of manly hands; he is losing the cream of the bargains that many travelling men have up their sleeves for "good people;" he is advertised only as a sneak by the men who are unfortunate enough to call on him once; he is to be the least **bit mean** to anyone shunned by the boys on the road, who are always well posted on who are the decent men in the trade. They all lay for him, and do him if they can. He may think he is sharp, but all the boys think he is an idiotic loon, and they love to give him an unfriendly blast every chance they can get, and many of them will work overtime to say a mean and generally true thing of him. Many of the "very smart" buyers are upstarts who do not represent a dollar they have ever earned; who are excess baggage on the hands of the firms they try to buy for, who would be more in proper place as wrap holders for a second-class race horse, or as chambermaids in a country livery stable, than as buyers for reputable concerns. It is not necessary to buy of every traveller who calls upon you, but if you have got vent your spite on one of them to whom you have given an order. If you feel called upon to be wamble-cropped and ugly and such a fool that you can't hold it in, and too cowardly to try it on someone your own size, give a traveller a good order, and then he will grin and bear it. Tell him that if the goods don't come exactly as represented and plumb up to the sample, that you'll fire 'em back and kick him out the next time he comes. He will laugh at it and say to the boys, "the old man is a d—d crank, but you can sell him all right," and the other travellers will at least tolerate you. If you can't give a man an order, you can give him a good, pleasant word, and make him feel almost as well as though you had bought a bill from him. There are very few travelling men who are not gentlemen, and the equal in every way of the men they call on. It is their way of getting a living, and it is an honest way. The writer tried it for 25 years and knows all about it, and I say it without fear of successful contradiction, that you make the mistake of your life when you do not treat travelling men with courtesy. And then when life's fitful dream is o'er, if you are fortunate enough to appear with us good people on the plains of Paradise, you'll find the travelling man in evidence, and you'll feel glad to meet him, for, if he has been there any length of time, he will know the place, and will willingly show his friends around and introduce them to the best people. Speak gently to the travelling man, "the larger the man the gentler speak," he is liable to be one of the proprietors in your next stopping place, when time shall be no more. Then,

"Here's to the health of the travelling man,
That merry, good-hearted fellow;
He is trying to do the best that he can,
And nary a streak of yellow
Can be found in this grand purveyor of mirth,
As he travels the world around;
And he circles the hemisphere with a girth
Of bargains and advice so sound.
May his time on earth be long and glad,
May he lay up wealth and never be sad;
May he sell lots of goods by car-load and case.
And then buy the firm out and run the old place.
Then we'll drink to his health at the hour of eleven.
May his family keep well, and his home be in heaven,
Aye, here's to the brightest of heaven's great plan—
The red-hot, still heating, travelling man."

CATALOGUES, BOOKLETS, ETC.

For the convenience of its readers HARDWARE AND METAL has opened its columns for the review of catalogues, booklets or other such publications issued by manufacturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. It is requested that when any of the trade write for any booklet mentioned in these columns that they credit HARDWARE AND METAL as the source of their information.

A Proof of Quality.

One of the most exceptional advertising devices which have ever been offered the Canadian trade has just come to hand from E. C. Atkins & Co., Indianapolis, Ind., and Toronto. To a cardboard envelope of sufficient strength to hold it firmly is attached an 8 in. sample of their "A A A" Spring flexible back saw blades. This blade, the accompanying description states, is "made from the highest quality of steel and tempered by our improved process whereby the tooth edge only is left hard while the back is drawn to a clock spring temper, which very materially strengthens the blade and will prevent it from kinking or breaking readily." It is further stated that it will not "stretch" or "bow-up" causing the hard tooth edge to crack or shell off,

The man from whom you buy goods has his ears wide open for a mention of Hardware and Metal. You have read his advertisement; tell him so.

neither will they "rough-up" or "wedge." The saw blade sent out is probably the most effective proof that could be given of the strength of these claims. Readers of Hardware and Metal who handle saws should secure one of these saw blade samples.

Hyatt Flexible Rollers.

The Hyatt Roller Bearing Co., Harrison., N. J., have issued a catalogue giving information regarding their Hyatt Flexible Rollers, as applied to shop trucks, core oven cars, jib cranes, traveling cranes, industrial railways, dryers, cement cylinders, rope sheaves, hoisting and conveying machinery, glass machinery, foundry ladles and wagons, lumber and ingot cars, trollers, transfer cars and tables, involving heavy duty at slow speed. It is stated in the booklet that there are toward a million Hyatt rollers in operation to-day, so that their use cannot now be considered merely an experiment. All users of the machinery, etc., referred to above, should secure a copy of this booklet.

Industrial Railways.

The Hoshor-Platt Co., 120 Liberty street, New York, manufacturers of industrial railway systems, handling and hoisting machinery, conveyors and steam shovels, locomotives and rolling stock, cables, rope, etc., have issued a comprehensive book describing their product. The book covers the field of industrial railway installation so comprehensively that all manufacturers considering the wisdom of a private railway should have this work as the wide reputation of the company ensure the reliability of any plans or figures given by them.

Beaver Post Hole Digger.

The Canada Foundry Co., Toronto, are manufacturing the Beaver post hole digger and have ready for distribution a folder describing it in detail. It is made of the best material and has the latest improvements, the blades being of forged steel and the jaws of heavy forgings. As there is no wood to rot or break the digger is built to last a lifetime. It retails at $5. Particulars will be supplied the trade on request.

Syracuse Smelting Worker.

The Syracuse Smelting Works, Montreal, have issued a circular to the trade advising the immediate purchase of pig tin, antimony and copper, in anticipation of higher prices. In another leaflet recently issued this firm say: "In the manufacture of ingot copper we have a process, by using metal refuse containing some copper, to eliminate the sulphur contained in the ore, thereby enabling us to make the purest kind of casting as well as phosphor ingot copper; as our output is large, we require considerable of it. We are in the market at all times for large quantities of scrap copper, scrap brass, copper or brass turnings, filings, sweepings and brass skimmings." Another circular they have issued gives the tragic experience of a plumber who did not use "Syracuse Smelting Works" solder.

Business Changes

ONTARIO.

THE E. D. Weber Co., general merchants, Wiarton, have advertised that they are retiring from business.

The Brussels Electric Light Co., Brussels, have sold out to Thuell Bros.

J. Gray, general merchant, Belle River, is closing out his business.

MACHINERY

THE MACHINERY MARKET.

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 31, 1904.

THERE is little change in the general condition of the machinery market. Actual business this week seems to have been quite as large as last week, and in some lines there is a slight improvement. The machinery houses are busy making deliveries of goods sold during the last two months, and which until recently the railways refused to accept. Orders for new goods are being obtained in fairly satisfactory numbers by travellers and inquiries received during the week have been numerous.

The prospects point to a number of very busy weeks, as many buyers have been in town inspecting machinery, and the local houses have been competing for good contracts. The improvement seems likely to be general. Very little is heard now of the dangers of slaughtering by American houses, and the general tone of the market is much steadier than at the beginning of the year.

The principal demand this week, as for some weeks past, has been from the saw mills and every mail is bringing inquiries to the local houses for saws, water wheels, engines, boilers and general saw mill supplies. Power transmission appliances also appear to be in good request.

The electrical machinery market is showing some life this week and the indications point to a further improvement.

For the present the machine tool market is quiet and there are no large buyers on the market.

Ontario.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, April 1, 1904.

THE improvement noted on the machinery market during the last couple of weeks continues, although there have not been any special features on the market this week. No large orders have been placed, nor has the amount of business been large for this season of the year. However, considering the way trade has been kept back during the greater part of the Winter by weather conditions which demoralized the railway service, the showing at the present time is very encouraging. Conditions on the New York machinery market have improved considerably during the past few weeks, and everywhere throughout the States this brighter feeling is apparent. It is probable that the effect of this has been felt and will be felt on the Canadian markets.

The business done on the Toronto market has consisted of small orders for the most part, but these have been fairly numerous. Enquiries still continue to come in well, while those of former weeks are ripening into contracts.

As noted last week, the improvement on the market has been very general, and there has been a fair demand in all lines. Perhaps wood working machinery still has the best position on the market this week, as it had last week. However, the improvement is more noticeable in the iron working machinery line. Boilers and engines still hold their own; and the demand for dynamos and motors still continues very good. Gas and gasoline engines have had a very fair demand.

Installation and Care of Electric Motors

THE life and satisfactory operation of an electric motor depend greatly on the manner in which it is installed, and this should be carefully done for the above reason, writes S. L. Barriett, in Power.

It should be securely bolted to a substantial level foundation in the most accessible place and one in which the armature may be removed without disturbing the motor if possible. The wiring should conform strictly to the rules and regulations of the National Board of Fire Underwriters and according to the diagram of connections furnished by the makers. Do not guess if you are not sure, for a slight mistake may result in a serious accident. A simple precaution is to remove the brushes from contact with the commutator, close the main switch and move the starting box handle slowly on until it is all on. You can thus tell if the retaining electro-magnet on the starting box is all right, and at the same time determine if current is passing through the motor fields. This is shown by the attraction of a hammer or chisel by the pole pieces. After determining that the fields are properly magnetized the current can be turned off and the brushes put in place carefully. They should be well fitted to the commutator before running the motor, and this may be done by rubbing them off with a piece of sandpaper held under them and against the surface of the commutator. This grinds the carbon to the same shape as the commutator, and after this is done the dust should be carefully blown off so as not to cause a short circuit; also see that all screws are properly tightened on the brush holders and that no tools are left where they may do harm to the motor.

In starting give the armature a few turns by hand, leaving the belt off while you turn the current on the first time. If the motor runs all right without sparking, stop it and put on the belt; if the motor sparks it may be stopped by loosening the rocker arm and shifting the position of the brushes to a point where the sparking ceases. The commutator should be true and smooth, but do not use emery or don't attempt to file the commutator when the current is on.

Too tight a belt causes the bearings to heat and they should at all times be lubricated with the best quality of dynamo oil. After the motor has been run a while, and if the bearing is running cool, the belt may be tightened if necessary by means of the belt tightners which are usually furnished with first-class machines. In starting the motor, be sure that the handle of the starting box is at the "off" position before closing the switch. The handle should be moved slowly until it is full on.

To stop the motor, open the switch and the starting box handle should return automatically. If the handle should fail to return after a few seconds, it is because the residual magnatism holds the armature. In this case

a piece of writing paper may be pasted over the poles of the magnet, after which you will probably find that the handle will return without trouble.

A motor should always be kept clean, but should not be cleaned while running. it is almost unnecessary to say that it should be placed in a dry place and one which is well ventilated so as not to become overheated; and it is best to delegate its care to one person who should be held responsible. The less adjusting and tinkering that is done to your motor, the better. The commutator is in its best condition when it has a dark glaze, and do not put oil or any patent preparation on if the brushes should spark. Wipe it off while running with a dry cloth to remove any carbon dust. The direction of rotation may be changed by crossing the field connections—that is, by taking out the wires which lead from the field coils and exchanging them in the same posts or by doing the same thing with the armature terminals.

Standard Corliss Engine.

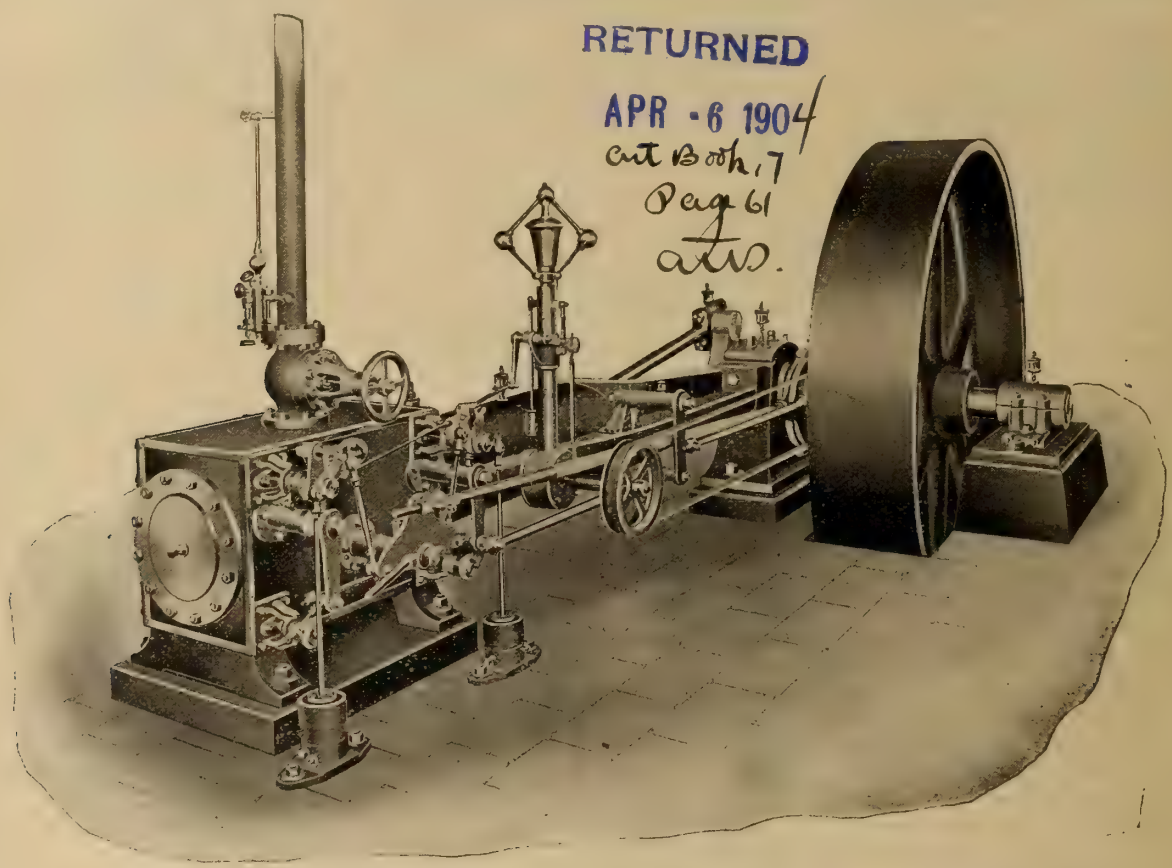
THE illustration shows the standard Corliss engine, made by the Laurie Engine Company, of Montreal. In the designing of this engine special attention has been devoted to the economies of steam power. When the success of a manufacturing enterprise may depend upon the economies employed in its conduct, the cost at which the power is produced, together with its regularity and freedom from accident or delay, become very important items.

The consumption of steam in a given engine varies with the conditions under which it is operated.

The following is approximately the consumption of the various types of Corliss engines, when worked at their rated capacities:

	Lbs. of steam.
1. Single cylinder non-condensing engine	20 to 28
2. Single cylinder condensing engine	19 to 24
3. Compound condensing engine	14 to 28
4. Compound non-condensing engine	19 to 24
5. Triple expansion condensing engine	12½ to 14

RETURNED
APR - 6 1904
cut Book, 7
Page 61
ctw.



These figures refer to engines working at their rated capacities. An engine working to its full capacity, or working much below its rated capacity, will go considerably below these figures.

Boilers vary as to their efficiency (or evaporation) from six pounds to nine pounds, i.e., six to nine pounds of water converted into steam per pound of coal consumed.

Taking the mean of these figures, viz., seven and a half pounds as an average, then an engine using twenty-eight pounds of steam per hour per horse-power, would use in coal 3.73 pounds per hour per horse-power, and one using fourteen pounds of steam would use 1.86 pounds of coal per hour per horse-power. These figures refer, of course, to the Corliss engines.

A saving of one pound of coal per hour per horse-power, on an engine developing one hundred horse-power, coal four dollars per ton, would represent a saving of six hundred and twenty-four dollars per year. Therefore a steam plant that will produce a horse-power on three pounds of coal per hour per horse-power is worth six hundred and twenty-four dollars per annum more than one that consumes four pounds per hour per horse-power.

The engine illustrated herewith has four valves for the distribution of steam this being a feature of the Corliss engines. The exhaust valves are entirely independent of the steam, and the steam valves are under the complete control of the governor and will give a range of cut off from 0 to 3-4 stroke. This feature helps to increase the capacity from standard rating to about 50 per cent. over load without variation of speed or straining of any description.

This engine is being used by street railways and large factories.

MACHINERY AND ELECTRICAL NOTES.

The Brantford union of the International Association of Machinists held its annual At Home recently.

Fire in the casting department of the Garth Company, foundrymen, Montreal, has damaged the department to the extent of $6,000.

Hon. C. A. Parsons has petitioned that his rights on the Canadian patent for turbine machinery be not forfeited by failure to manufacture in Canada within the specified time.

The power of the Galt & Preston Street Railway Co., Limited, has been extended so as to allow the company to amalgamate with any other incorporated steam or electric railway.

The power of the Preston & Berlin Street Railway Co., Limited, has been extended to allow the company to extend their line of railway to Waterloo, and also throughout the town.

The Dewitt Electric Company, of Sydney, N.S., have secured the contract for the construction of 100 miles of telegraph lines between Halifax, Mahone and Bridgewater and Liverpool.

A contract for lighting the public buildings of Fredericton, N.B., for a period of ten years in return for the franchise granted the company has been signed by the representatives of the People's Light and Power Co. and the city.

The Hamilton Bridge Company have been awarded the contract for the iron superstructure, to cost $3,111, for a bridge over the Thames River, at London, Ont. The contract for the concrete abutments goes to Cawrse & Talbot.

P. G. Gossler, retiring general superintendent and engineer of the Montreal Light, Heat & Power Co., Montreal, has assumed the duties of general manager of the operating department of the electric railway contracting firm of J. G. White & Co., New York.

A general increase in wages goes into effect at the plant of the Dominion Iron and Steel Co. On Friday. It will be entirely satisfactory to the P.W.A. The largest increase will be to the laborers, who will receive $1.40 a day under the new scale, an increase of 14 cents.

The Martin Electric Supply & Construction Co., Limited, St. Catharines, Ont., have been incorporated with a capital of $40,000, to construct and operate works for the production and distribution of electricity for the purposes of light, heat and power, and to take over the business of the Martin Electric Supply Co., St. Catharines. The directors are: F. W. Martin, G. H. Martin, J. S. Campbell, C. W. Martin and J. G. Martin, all of St. Catharines.

If an engineer is content to see the wheels turn and the belts go, and looks for nothing further, it does not matter what his age is, he is too old for a new position; but an engineer who keeps abreast with the times, who today is studying the turbine and superheated steam, electrical transmission and concrete foundations—in fact one who lets nothing new go past without criticism—will never get too old to be of the highest usefulness anywhere.

The Rhodes Curry Co., Amherst, N. S., have just turned out an immense snow plow of new design, which was patented July 29, 1902. The purpose of the design is to widen the clearings along the tracks. The front of the plow can be widened from 2 feet to 15 feet. The front is constructed of heavy iron plate, and it is claimed that the plow will go through a ten foot drift and throw the snow over a thirteen foot drift. The weight is 46,000 pounds. The plow will be operated by compressed air.

A Glace Bay, N.S., despatch says that the south side of Phalen Seam. No. 2 colliery goes on double shift to-morrow. This includes one-fourth of the working of the mine. A week from to-morrow Caledonia Pit will be double shifted and work will resume in International Colliery, Bridgeport. As soon as navigation opens all pits will be double shifted and then an output of at least 15,000 tons per day will be required to fill the Dominion Coal Company's contracts. Everything points to a most prosperous season around the Cape Breton collieries.

Tests of High-Speed Steel.

SOME very interesting tests have recently been made of the high velocity steel manufactured by J. Beardshaw & Sons, Baltic Steel Works, England. The Canadian representative of this firm, Alexander Gibb, 13 St. John street, Montreal, has recently received from them copies of reports given them concerning their high velocity steel "Conqueror" brand. The report of trials made at the English Governments works in February reads as follows:

"With regard to the pieces of 5-8-inch square which you sent up to me on the 12th inst., I would say that these were drawn down to 1-2-inch square for use in a holder; they had been using high-speed steel for the tool working on hard steel, and they had not been able to run at more than 15 feet per minute. Upon putting in your untreated tool, the speed was put up to 30 feet, and then up to 40 feet per minute and this was as fast as the lathe could be run. At this speed the tool worked perfectly for several hours without regrinding.

"Another piece of the steel was then put into a similar tool, and treated with the usual high heat and blast, and it was put to work on 3C oil toughened steel. It was found possible to run this at 60 feet per minute, but it would not last more than an hour. When run at 50 or even 55 feet per minute it worked with ease and the edge held good for three and more hours at a time.

"So far as I could learn, they had never before found any high-speed steel that would work on this class of steel at more than 35 or 40 feet per minute, and even then the tools required frequent regrinding.

"These trials indicate that this steel is of a most remarkable quality and that there need not be any fear but that under all circumstances and on all classes of work this steel will do far more work and at higher speeds than any steel now on the market."

The following is a report on "Conqueror" high velocity turning tools tested at the Sheffield Axle Works:

Dated February, 1904.

"Speed per minute, 40 feet; traverse per revolution, 1-8-inch; depth of cut, 1 1-2-inch. This tool has been working for two nights and two days, and is still at work. It has turned 25 axles without regrinding, which is much better than ever done before."

Side tool which often breaks after turning three or four axles.

This tool has now been at work for two days, having faced over 20 axles without regrinding and is working excellently—by far the best tool ever tested.

The following is a report from railway carriage works:

"Beardshaw's high velocity steel 1 1-4 inches x 1-inch tested March 15th, 1904. Roughing axles in high speed lathe running 45 feet per minute with 1-4-inch cut, traversing 4 inches per minute; the tool roughed 17 axles and was then in good order. It was reground to a different cutting edge and turned a further 12 axles at the same speed, the tool still being in good condition. The man at the lathes says that the best steel he has previously used would do only three to four axles before giving out."

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

If **CORUNDUM** be no better than emery, then emery is no better than iron ore.

If you grant that the United States Government is right when it states that emery is a mechanical admixture of Corundum and magnetite or hematite iron ore, you must at once grant the above deduction is logical.

But to use iron ore for polishing or grinding iron and steel would be absurd. If so, why use iron ore mixed with some Corundum instead of the pure abrasive **CRAIG MINE CRYSTAL CORUNDUM.**

The Canada Corundum Company, Limited

TORONTO, CANADA.

THE VALUE OF SYSTEM IN THE FACTORY.

By D. L. McGibbon, General Manager of The Canadian Rubber Co.

BEFORE proceeding with my remarks on system and organization, I would like to say a few words on what prompted me to inauguarate the series of lectures to employes of the Canadian Rubber Company, and the benefits to both company and employes it is hoped will be derived from them.

As you know it is only a little over a year since I assumed the management of the company, and having had no previous knowledge of the rubber industry, you can well imagine how ordinary phrases used in the rubber business first sounded to my ears.

In seeking detailed information I was struck with the fact that whilst employes in general could tell me what was necessary to do under certain circumstances, or how certain things had been done under other circumstances, very few could tell me the reason "why." It therefore seemed to me that it was important to educate employes, and more especially the younger element, in the practical rudiments of the rubber industry, and the best way to do this was by a course of short lectures.

Mr. Thornton has given a lecture on crude rubber, and Mr. MacLaren has given one on chemistry, both of which have been extremely interesting, as well as highly educative to me as I am sure they were to you. It occurred to me, however, that before going further with the lectures on crude rubber, chemistry or mechanical engineering, that a few words along the line of system and organization might be beneficial and that is what I am going to take up a few moments of your time with to-night.

I think you will all agree with me that the greatest successes in life have been occasioned by "concentration of purpose, energy and action" and I think it goes without saying that starting with a correct principle it can be better effected by proper system and organization than without it.

System and organization go hand in hand, but to be effective in commercial life, must be economical and simple. Too many systems are unwieldy and of the red tape order, and too many organizations spoiled by numbers or personalities. I do not intend to talk on system or organization as applied to a government, church, army or large commercial industry; on the contrary, I want to speak of the every day system and organization of the individual, whether he has one employe in his charge or one hundred, or to be more explicit the employe who has nothing else under his charge except his own individuality. If you look at existing conditions to-day you will find the most effective results obtained by those governments, churches or armies that have the best systems and organizations, and this should in itself be highly instructive to us.

What is system? System is a word used to define the mode and process of procedure in conducting an organization.

ORGANIZATION DEFINED.

What is organization? Organization is a word used to define an amalgamation of interests concentrated in obtaining the same results. In the case of this company, the system is the complete process, commencing with the purchase of the raw material to the selling of the finished article and prospective profitable results based on certan economic principles being carried out by employes (or in other words the organization).

Both system and organization, therefore, can either be good or bad, but I propose only to deal with them on the assumption that they are to be used for the betterment of conditions and for the attainment of proper results. To make any system effective and successful, those guiding and operating it must be fully conversant with—

1. The necessity of a system.
2. A thorough knowledge of the system proposed.
3. Absolute confidence that the system will do what is expected of it.

And above all, those operating it should see that no deviations are permitted.

To make any organization effective and successful depends principally on loyalty to superior officers as well as the employer and his business. Loyalty means a lot, and the employer knowing his employes' loyalty is assured of great assistance in perfecting his organization and obtaining results originally calculated on by means of his system.

It is impossible for me to outline a system in detail for every one, but I think each one can take home to himself the elementary principles of a correct system and proper organization and apply them to his individual case if required.

Let me illustrate what a good system and organization can do and what a good system and bad organization can do. A piece of delicate machinery requires oiling twice a day and the superintendent decides on a system of having it oiled at 7 a.m. and at 1 p.m., naming the quantity of oil to be used each time. He calculates by this that the machine will require so many gallons of oil in a month, and that the cost of oiling the machine for a month is a certain sum. He uses these figures in estimating the cost of operating his plant, and which naturally form the basis of costs of his finished product. In turn the selling price is made from his basis, and the employer having the cost and the selling prices before him sees a prospective profit. Now should the organization (in this case the man that oils the machine) carry out the system, namely of oiling the machine at 7 a.m. and 1 p.m., and use only the quantity named by the superintendent, the number of gallons used in a month and the cost of same will correspond with the estimate of the superintendent, and, therefore, the cost of the finished product (as far as the oil is concerned), as well as the selling price is the same as the original estimate, and the profit the employer originally figured on is earned. But should the organization not be loyal or accurate, and oil the machine at different times than instructed and use more oil than intended, the estimate of the superintendent, sales department, and employer are not realized, and the prospective profit is turned into an actual loss. This same principle applies to every one in the employ of the company, whether in the factory or office from the most insignificant position to those holding the highest executive positions.

SOME ILLUSTRATIONS.

Perhaps a few more illustrations in various departments may be of some help in determining how each of you should perform your particular duty and with your permission I will give them to you:

1. Firemen using too much coal.
2. Compounders careless in weighing.
3. Mill and calendar men, by loafing, losing use of machinery.
4. Cutters of raw material not sufficiently careful to minimize waste.
5. Makers of finished articles not sufficiently careful to avoid making imperfect goods.
6. Press heater, and vulcanizing employes, being too slow to empty and fill their receptacles, thus wasting steam

and heat, and taking chances of over or undercuring expensive goods.

7. Weighers, measurers and packers, through carelessness, causing complaints from customers for short weight, short measurement, or imperfect packing, or worse still, of causing an irreparable loss to employer by giving overweight or overmeasurement.

8. Cost clerk by inaccuracy causing quotations to be made based on wrong costs, thus either losing money by prices being too low, or losing trade by prices being too high.

9. Invoice clerks, by wrong extensions or additions, and incorrect copying of prices, losing customers for the company as well as money.

10. Travellers in their eagerness to show volumes of sales, making promises or concessions of some kind that they know their employer cannot afford.

11. Superintendents and managers of departments, by shielding disloyal, incompetent, untrustworthy employes, are assisting to unsystematize and disorganize the efforts of their employer.

12. The general manager or director who conserves his private interest to the detriment of the company, is no better than the humblest employe in this respect.

I could go on indefinitely with illustrations of this nature, but I think I have shown you sufficient to make you

LOCATING DEFECTS.

A large manufacturing industry might be properly systematized, but without a proper organization, the system will not be effective, but a good system will enable the employer to locate the defective parts of his organization.

Let me, therefore, entreat each and all of you to carry out to the letter the system adopted and report to your direct superior officer, be he a foreman, superintendent, or manager, any improvement that you think could be made, for it is by inventive suggestions that many an employe has gained rapid promotion.

Each and all of you form a component part of the organization of the Canadian Rubber Company, and if you are interested in your individual success and advancement, you will be interested in the success of the company, and assist to promote its interests, for, let me tell you plainly that if the company is successful your chances for more remuneration are much better. If, therefore, this is your desire, remember what I say tonight.

Understand and absolutely master your work.

Do not steal from the company time that you are paid for.

Do not be afraid to ask questions relative to your work.

Do not be disheartened by failure, the old addage, if you don't at first succeed, try, try again, is an admirable precept to adopt.

Suggest improvements to your superior officers.

Above all, however, be loyal to yourselves, your superior officers, and the company, and if you do this your success is assured.

ARGUMENT.

We now offer a practical time piece for the Hardware Trade of Canada and base our statement upon the following:

First—It is absolutely guaranteed to keep accurate time.

Second—It stands rough usage and does not get out of order easily, making it the only watch for dealers outside of the jewelery trade to handle, and also making it a practical one for sportsmen, boys and all men who give a watch hard usage.

Third—Its low price and high quality insure a tremendous sale, which we further augment by furnishing many handsome advertising devices for your store.

Fourth—Last but not least, these watches offer a handsome profit. Price cutters are not supplied.

Sold by several leading Hardware Jobbers of Canada. We will tell you who they are upon request.

Trial Offer—To any Hardware Dealer who will write to us upon his business letter head and inclose 75c. we will send a sample watch (duty not paid) and our catalogue, so that he can test its accuracy and durability

None so Blind As Those Who Won't See.

HARDWARE AND METAL can prove of valuable assistance to the selling end of any business which seeks trade among the hardware and general storekeepers of Canada.

We advance many plain, indisputable arguments to this effect.

And still there are some folks who can't see it.

Some who can't see how it's going to pay them.

And won't even invest a few dollars to find out.

Very few folks like this, but we would like to convince even them.

If we only could, we'd get a good deal of satisfaction out of it—and we know they would, too.

Don't you think they're blind to their own interests.

Here's a paper that finds a welcome in every worth-while grocery from Halifax to Vancouver once every week—so can't you see that an announcement of any interest must surely command some attention?

The advertising columns of HARDWARE AND METAL provide about the best waywe know of keeping in close touch with all the hardwaremen of Canada all the time.

You can see value in a paper like this—

Can't you?

Hardware and Metal

THE ENGINELESS AUTOMOBILE.

By A. J. C.

NOW is the time for the hardware man to establish himself as a medium for trade and repairs in automobiles and bicycles. The popularity of the automobile is so apparent that there needs to be said nothing under this head. With the bicycle there is an argument to be laid down.

It must be understood that the propelled vehicle, the little, engineless automobile, has returned to the vogue it formerly enjoyed, and any hesitancy in granting it the place it demands in a hardware man's stock will deprive the the rightful dealer of the profits he formerly enjoyed. If machine vehicles, either automobiles or bicycles, are given no attention by hardware men, and no attempt is made to meet demands, bicyclists and automobilists will be catered to by trades men in these special lines.

A piece of commercial history of this order has already come to pass with regard to the phonograph. It was rejected by the music dealers as not being properly an article of their stock. The result was that the phonograph found a place for itself and no one now thinks of going to the music dealers for either machines or records. This is particularly the case in England.

The bicycle, which is in demand this season, is an improved machine, boasting of a cushion frame and a coaster brake. The cushion device is set in the rear part of the frame, under the saddle. It springs by air pressure and absorbes the jar which is carried from the wheel to the body of the rider on a rigid frame. It makes the seat much more comfortable and secure.

The coaster brake is a most simple and serviceable device which may be fitted to any wheel without increasing its weight. The chief feature of the brake is that it enables the bicyclist to detach the sprocket wheel from the axle so that the wheels may revolve without bringing either the pedals or chain into play. This makes bicycling most pleasurable, as hills may be coasted, or the wheel run on level and smooth stretches without continuous peddling.

The brake feature of the coaster brake is employed when the rider presses back on the pedals. According to the pressure applied the wheel may be brought to a dead stop.

With these improvements it is safe to say that many old wheels will be discarded and improved ones purchased. In fact it has been calculated that many old wheels will be called in this season as they have realized the full possibilities of their life. A bicycle is durably made, but there is still a limit to its lasting qualities. Reports of sales show a substantial increase so far and the advertising that the leading firms both in Canada and the United States must greatly stimulate trade.

It is therefore an occasion for the hardware dealer to put himself in a position not only to meet, but to encourage demands, if he wishes to hold the trade for his advantage.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

RECIPROCITY AND THE NEW ENGLAND STATES.

CONDITIONS at present existing in the New England States and which are particularly marked in Boston and the surrounding district, are of no little interest to Canadians at a time when the preferential campaign is being exploited at home and in Great Britain.

The one-time prosperity of Boston has been seriously impared by the removal of many manufacturing industries and a large number of people into the New York districts, and Bostonians are now awakening to the fact that some measures will have to be taken in order to attract commerce to that city and district. In view of this a strong sentiment has sprung up in favor of the removal of the tariff wall. By such means, it is thought, that much of the export trade of Canada may be transferred to that port, which is much nearer and easier of access than either Halifax or St. John.

Another factor largely responsible for the strong feeling in favor of free trade between Canada and the United States, is the great difficulty experienced in provisioning the city and districts of Boston, owing to the poor condition of the agricultural lands, many of the farmers having deserted on account of their inability to produce satisfactory crops. Should an understanding become possible with Canada in regard to reciprocity, a ready market would be available for Canadian produce. This would remove the difficulty of provisioning Boston districts, and place the population on a wage-living basis.

In the event of the preferential tariff becoming an established fact between Great Britain and her colonies, many New England manufacturers are discussing the advisability of establishing branch factories for their industries on Canadian soil, which would at once give them all the benefits of free trade with Great Britain. It would appear that Canada stands to win whichever policy is adopted.

DO NOT BE A "KNOCKER."

"A KNOCKER" is the parlance of the street to designate a disgruntled individual who makes it his business or delight to "knock" or hurt in any possible way another person or a company with whom he has been at one time associated. It is frequently applied to the man who for reasons sufficient to the employer, has been permitted to seek another situation, and who, engaging with some other concern, busies himself in running down or caluminating his previous employers. Back-biting, or "knocking" is a dangerous game outside of any legal liability the "knocker" may assume; it is a "boomerang" which, when it rebounds inflicts more damage to the thrower, than to his victim. It is a Nemesis bound to bring sorrow in its wake, and its employment has been the cause of ruining the business prospects of many a bright young man.

Instances are numerous in the life of every concern where the "knocker" has tried to depreciate the commercial standing of his former employers, by either directly slurring the whole firm, or casting reflections upon the character of its individual members; by giving away to the customers of the old house "inside" information of supposed value, or by depreciating certain acknowledged virtues of the goods of the house. The "knocker" is very prolific in ways and means of making his tactics felt; in many instances a truly Machivelian spirit and finesse is shown. Iago's consummate and artistic deviltry is clumsy malignity in comparison with the work of the modern "knocker", the work of Shakespeare's creature against the proud Moor bears the palliating excuse of jealousy, but the "knocker" of to-day has as a rule only a coarse vindictiveness as apology.

The expression that "Chickens will come home to roost" is as true as gospel, and distinctly applicable to the "knocker" and his words and deeds, and often the remorse comes too late after the young man has changed his employment half a dozen times. Reputation travels by wireless telegraphy. and though the applicant for a position may not be told so, his would-be-employer has heard of the propensity to "run down" each house after severing connection therewith, and naturally has no fact that he had been too prone to the same with him.

The "knocker" is impolitic as well as foolish, the "wheels of time turn round," and he can never know when the favor of his old employer will be required, and be serviceable in furthering some desirable business scheme. Cases have occurred where a dismissed employe could have re-engaged with his old house, probably been received on favorable terms, had it not been for the fact that he had been too prone to "knock" the house in every way.

We have in mind a recent occurrence where a young man who had held a good situation in one of Canada's leading commercial houses, was for reasons of inebriety allowed to sever his connection with the firm. Valuable though he was in every way, his employers felt that in the interest of their trade and their commercial reputation, they would be

unwise to allow him to continue as a member of their travelling staff. The young man secured a position with a rival house, and influenced no doubt by family pressure stopped indulging in strong drink and attended to his duties with his new employers. One great fault, however, he acquired in place of his old drinking habits, was that he lost no opportunity of maligning his old employers persistently and vindictively. Calling as he naturally did on his old customers, and pursuing his unwise vituperation, he was met with the question : "How is it that your old firm is everything that is bad now, and unworthy of our trade, when for the past six years you couldn't say anything but what was good of them? No, we don't think we'll change our account old man. There must be something wrong about this."

In a sense, this was the question he had to answer all over his ground. After a few years a vacancy occured in his old house's staff and things not being as bright with him as they might have been, he made application for the position. It was duly received, and would have been favorably considered had the firm not felt themselves too highly outraged and maligned by their old traveller during his stay with their competitor. They consequently wrote him regretting that while they had considered his application in the very best light possible, they felt that his unwise words had weakened their confidence too seriously to admit of their re-engaging him.

This is not an imaginary case, and with slight variations, not an uncommon one. But business men and employers generally weigh very carefully the actions and words of their employes, and the so-called "knocker's" reputation is a bar to steady employment. Our advice to young men changing their positions from one firm to another is : Don't be a "knocker," leave your employers in a friendly way, and though your heart may be filled with revengeful thoughts, keep a curb on your tongue. If you feel that you cannot say any good things of them, don't say anything to the contrary,—there must be something good about the house and its dealings after all, or they wouldn't be where they are, or do the business they are doing. Get another job and "saw wood" for your new employers, and use your own saw; don't throw too many knotted pieces on your neighbor's wood pile, those knotted pieces make the best fire once they get started, and they don't burn away as fast as your own clear-cut sticks. Winter coming along, you might wish you had kept the knotted pieces yourself—remember about the "Chickens coming home to roost." Don't try to build up your own reputation at the expense of someone else in your line of business—don't be a knocker. Don't slur the reputation of your old employers. What is it that Shakespeare says :

"He that steals my purse, steals trash, but he that filches from me my good name robs me of that which not enriches him, and makes me poor indeed."

RETAILERS SHOULD ORGANIZE.

The attention of retail hardware dealers all over Canada is directed to the report of the Toronto Retail Hardware Association banquet in another part of this paper. Hardware and Metal has long advocated a more thorough organization of retail hardwaremen and is glad to note how thoroughly its views are endorsed by representative men in the trade.

THE SURTAX AND GERMAN CEMENTS.

IN October last Hardware and Metal had an article pointing out that if the German cement manufacturers are to retain their hold upon the Canadian market in spite of the surtax they will be forced to reduce their prices. Germany is producing much more cement than the demands of the home market warrant and in order to keep her immense plants working she is compelled to dispose of a very large surplus abroad even at prices below the cost of production. For a long time the export price of German cements has been very low; in fact, the price has about represented the actual cost of manufacture and some importers were inclined to believe that the German makers would retire from the Canadian market rather than make a further reduction which would entail an actual loss. However, the German makers have apparently decided to meet the surtax in part and several importers state that they have been offered German cements at the old price plus only half the surtax. Evidently the German is not prepared to abandon his Canadian cement trade without a struggle. Perhaps he has some hopes that the surtax will not last forever. and is determined in the meantime to keep his brands on the market.

Large stocks of German cement were accumulated last Fall by the leading importers before the surtax went into effect. During the Winter months, the sales were not very large and as most importers have stocks on hand sufficient to supply the demand for some months they are not buying very freely even at the concessions offered. Meanwhile the Canadian manufacturers should be able to push the domestic article into greater prominence and importers say that they see no reason why the Belgian and English cements should not profit at the expense of their handicapped German rival.

A few years ago the German cements had a hold upon the Canadian market which it would have required more than the present surtax to shake. This was due to the superior quality of the German cements. The German manufacturer ground his cement buch finer than did his competitors and therby greatly increased its tensile strength. But the English and Belgian makers have since installed new machinery and experts say that their produt is quite the equal of the German. Most of our Canadian manufacturers have shown great enterprise in equipping their plants with the best machinery and their product challenges comparison with the world.

Hence there are few buyers who are willing to pay an increased price for the German article and in order to retain his hold upon the Canadian market the German manufacturer may be forced to reduce his prices to the full extent of the surtax. Whether or not he will do so remains to be seen.

FIELD FENCING IN THE HARDWARE STORE.

AT the last convention of the Iowa Retail Hardware Dealers' Association the subject of fencing was discussed. It was agreed that the day of the barb-wire fence had passed. An estimate of the needs of fencing in Iowa showed a total of $35,502,400, which would aggregate a big business for the fence dealers of the state. It was pointed out that three classes of dealers handle fence—hardware dealers, implement dealers and lumber dealers. The proportion that each class of dealers handle in the state is about as follows: Hardware dealers, one-half of the entire amount; lumber dealers, three-fifths, and implement dealers, two-fifths of the balance. These of course, are largely estimated, but in the main are correct. This will give the hardware dealers about $18,000,000 worth of fence to distribute to the farmers of the State of Iowa during the next few years.

These figures are highly significant, and can be compared with an easy calculation applied to any portion of the Dominion of Canada. The woven wire fencing department of the Canadian hardware dealer's business cannot fail to increase in importance and profit. The trade is coming back to the hardware dealer and it can be plainly seen that the factory-made fence, complete in the roll, is replacing the field-made article. It is to the advantage of the hardware merchant to introduce a fence with which he can build up a permanent trade. He should examine all the principal makes very carefully and select the strongest, most durable and most economical. Fencing made of the heaviest wire, requiring the fewest posts and possessing rigidity and elasticity at the same time, should be his choice to begin with. With such a fence he will have no trouble in satisfying customers and in building up a trade, the possibilities of which are to be measured only by the extent of the arable lands of our great country.

A FIRM IRON MARKET.

A REMARKABLE change in the iron and steel market has taken place in the past six weeks. For months the iron market of the United States had been in an unsettled condition, due primarily to continued increase in production without a corresponding advance in consumption. So general was the curtailment of production that depression was predicted throughout the United States. Strength was given to this opinion by the heavy slump of stocks, notably of "industrials," chief of which was that of the United States Steel Corporation.

Such a condition of affairs in the big Republic to the south naturally caused some forebodings in Canada, which manifested itself in an agitation for greater "protection" against the possibilities of the "dumping" of United States goods on the Canadian market.

However, the fears of the many were not realized. Big crops in the West in both the United States and Canada, did much to offset the contraction of business in the East, and to stem the current of pessimistic opinion which was such a material factor in depressing the market.

Slowly, but surely, confidence was regained. The railroads gave orders to go on with extensions decided on months before, but suspended owing to lessening receipts. Building operations were continued on a larger scale. It is a noteworthy fact that the iron and steel market to-day depends in important measure on the business in rails and structural steel. As the demand increased blast furnaces which were "blown out" were again started, until the production had again attained a volume even greater than its highest record previously. Yet stocks did not accumulate. Then the market gathered renewed strength and prices have stiffened, last week's advance of 50 to 75c. per ton being an indisputable indication of the turn of events.

The Canadian market has not failed to respond to the stronger feeling in the United States. All iron and steel products have stiffened in value. The situation is simply that, whereas a few weeks ago there was uncertainty, to-day there is a widespread confidence and insistence on full prices.

MANUFACTURING ESTABLISHMENT WANTED.

A subscriber in Almonte, Ontario, writes to Hardware and Metal as follows:

"Have you the name of any firm that are looking for an A 1 location to start a manufacturing business in. We have one of the prettiest towns in the Ottawa valley, and have more manufacturing done here than in any other town of its size in Onatrio. We are anxious to have some other industry start here as we have the best of water power going to waste."

Any firm looking for a good location might do well to examine the advantages which Almonte has to offer. Hardware and Metal will put any inquirer in communication with this subscriber. Address editor Hardware and Metal, Montreal.

PERSONAL MENTION.

Mr. A. E. Carmichael, who has for the past four years represented Marshall Wells Hardware Co., of Winnipeg, in Alberta and British Columbia, is leaving for Winnipeg to take a position in the house. J. W. Nivin succeeds him, with headquarters at Calgary, N.W.T.

Mr. G. Stothart, hardware merchant, Chatham, N.B., has enlarged his business connection by opening a first-class crockery store. Miss McLean is at present managing the new store.

INQUIRIES FOR CANADIAN TRADE.

The following were among the inquiries relating to Canadian trade recently received at the Canadian Government office in London, Eng.

1. A London importer is seeking supplies of maple and hickory skewers from Canada in carloads of 160 barrels.

2 A capable representative in Canada is required by the Swiss proprietor of a process for preserving boilers against incrustation.

4. A London merchant offering good references is open to represent Canadian houses either as a buying or selling agent.

[The names of those making inquiries may be obtained from the Editor of HARDWARE AND METAL.]

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 31, 1904.

Hardware.

GENERAL conditions in the local hardware market continue much the same as at the time of our last report. The jobbing houses are now obtaining good supplies from the manufacturers and are able to ship most lines promptly. During the long blockade jobber as well as retailer was often short of goods. Shipments are now being made in large quantities and the local wholesale houses are scenes of bustling activity. Orders are coming in steadily for all lines of Spring and Summer goods and the indications point to an exceptionally busy April and May. It is not impossible that by the end of May the total volume of business for the five months of 1904 may equal that of 1903. But while orders are coming in satisfactorily and all the indications point to a large turnover of business, the wholesale houses report that collections are still very disappointing. The country roads are reported impassable in many districts and consequently retail business has not yet recovered from the paralysis of the Winter months when all traffic was stopped by the snow blockades. Retailers are unable to get their money and their business is still small. Consequently jobber and manufacturer are forced to carry the accounts of many reputable retail firms which seldom or never before had to ask for an extension of time. Money continues very tight and the trade are waiting anxiously for the opening of country roads and the wonderful impetus which it is expected to give to business.

Price changes this week are few, the only change of importance being an advance of about 15 per cent. in brass door latches.

Sap Spouts—Selling in large quantities in Eastern Townships and throughout the province. The price is $6.75 per 1,000. Cook's sugar bits are selling at 50 per cent. off list.

Churns—There are numerous inquiries for most lines of churns and business during the week is reported very satisfactory. The discounts are 40 and 15 per cent. f.o.b. Montreal and 30 and 30 per cent. f.o.b. factory.

Poultry Netting—Shipments are now being made for orders received during the last two months. Most orders have been already booked but a few are still being received. Discounts are, for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-gauge, the discounts are 55 and 5 per cent.

Galvanized Poultry Nettings Staples—In steady request at former prices which were as follows: Sizes 5-8, 3-4, 1, 1 1-8, 10-lb boxes, $12.50 list; 25 and 50-lb boxes, $12.25 list; 100-lb boxes, $12 list. Less 57 1-2 per cent.

Bed Staples—The discount on the Montreal Rolling Mills Company's and the B. Greening Wire Company's lists is 57 1-2 per cent. The discounts on the Dominion Wire Company's list are 25 and 2 1-2 per cent.

Blind Staples—The discount is 40 per cent.

Boxwood Rules—Discounts range from 52 1-2 to 50 per cent. off list.

Hardwood Step Ladders—Prices are not uniform and are scarcely quotable, but as was noted before, there has been a general advance of about 20 per cent.

Shot Guns—As was noted in last week's issue, American single-barrel guns are now very cheap and scarcely quotable. Until a short time ago, there was an agreed price among the manufacturers, but this price is not now being maintained and owing to excessive competition the trade can, for a short time at least, secure these goods at or near cost. It is not likely that this condition of affairs will continue long.

Wooden Goods—As noted last week, some lines of wooden tubs have been advanced about 5 per cent. All lines of wooden goods are firm in price.

Heavy Screw Hooks and Hinges—The demand shows considerable improvement. Size 12 inches and upward are selling at $3.25 per 100 lbs; the price of 6, 8 and 10-inch sizes is $4.25.

Lawn Mowers—There is a steady demand this week at the following unchang prices: With 8-inch wheel, sizes 12, 14 and 16 inch, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18 $4.75; 20, $5.25 each.

Garden Hose—Trade continues satisfactory at the following unchanged discounts: Trade, 75 per cent.; Western, 65 and 10 per cent.; White, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; cotton, 60 per cent.

Harvest Tools—The discount is 60 per cent.

Spring Hinges—There is a fair demand at steady prices. We quote: No. 5, $17.25 per gross; No. 10 $18 per gross: No. 20, $10.50; No. 120, $20 No.. 51, $9.25; No. 50, $27.50.

Wire Nails—Prices continue steady at the following figures: $2.40 per keg carlots and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford and St. John.

Cut Nails—Prices rule steady at former quotations. There is very little doing. We quote $2.30 per keg f.o.b. Montreal, Toronto, Hamilton and St. John.

Fence Staples—A few large orders from Manitoba were booked this week for shipment at the opening of navigation. Prices continue firm as follows: $3 per 100-lb keg for galvanized, and $2.80 for bright; 25 to 50-lb packages, 25c extra.

Pressed Spikes—The discount is 25 per cent.

Horseshoes—There is very little business at present. Prices have not been changed. We quote: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c per keg extra f.o.b. Montreal only.

Horsenails—There is nothing doing at present. We quote: C brand, 40, 10 and 71-2 per cent. off list; other brands 55 to 57 1-2 per cent. off.

Screen Wire Cloth—The price is $1.50 per 100 square feet.

Galvanized Coil Spring Wire—There has been a considerable improvement in the demand for this line during the last week. Prices are steady at former figures. Our quotations are as follows: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Carlots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in carlots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—The demand has been brisk this week. Prices continue as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11 $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots 12 1-2c extra per 100 lbs will be charged.

Barb Wire—There is not much doing at present as most retailers have bought early in the season. We quote as follows: $2.75 per 100 lbs f.o.b. Montreal and $2.50 f.o.b. Cleveland. Carlots of 15 tons $2.40 f.o.b. Cleveland.

Smooth Steel Wire—There is a moderate demand at the following prices: Bright and annealed, $2.50 per 100 lb

f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb are now as follows: Coppered wire, 60c; tinned wire, $2; oiling, 10c; spring wire, $1.25; best steel wire, 75c; bright soft-drawn, 15c; hay-baling wire, 20 to 25c.

Annealed Hay Wire—Annealed hay wire and annealed and oiled wire are now sold at list prices plus the usual extras. As noted before this is equivalent to an advance of 25 cents per 100 lbs on hay wire.

Fine Steel Wire—There is only a moderate enquiry. The discount is 25 per cent, with net extras as follows: 1 and 2-lb hanks, 25c per 100-lbs; 1-2-lb hanks, 37 1-2c; 1-4-lb hanks, 50c.

Brass Wire—The market is quiet. The discount is 60 per cent.

Copper Wire—There is very little doing. The discount is 60 per cent.

Rivets and Burrs—Prices are steady and the demand is brisk. We quote the following discounts: Best iron rivets section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—There is considerable activity in bolts and nuts, "rush" orders being numerous. Manufacturers have good stocks on hand. Discounts continue as follows: Carriage bolts common, ($1.00) list 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes 4c per lb off; nuts, hexagon, all sizes, 4 1-4c per lb off.

Washers, 45 per cent. off.

Screws—The demand is now becoming brisk as there is every indication that building operations this year will be extensive. The discounts are still as follows: Round head, bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head 80 per cent.

Cordage—Cotton goods are very firmly held at prices quoted. The rope market is steady. We quote as follows: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; Russian tarred spunyarn, 13 1-2c; jute rope, 3-8-in in diameter and upwards, 9c; cotton rope, 21c; cotton twine, 24c for 3 and 4 ply. Cotton bedcord, 90c to $1.70, according to length. Sash cord 30 to 31 1-2c; cotton candle wick, 22 to 24c.

Building Paper—There is a further improvement in the demand. Our quotations continue as follows: Tarred felt, $1.85 per 100 lb; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry sheathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c per roll.

Cement—Some remarks on the situation in German cements will be found in another column. German manufacturers are reducing their prices by half the amount of the surtax, but it is doubtful if this will be sufficient to hold the market for them. Stocks of German cement held by importers are large and as yet no changes have been made in price. We quote as follows: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel, ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—There is a considerable movement in firebricks this week. Quotations are: English $16 to $22 per 1,000; Scotch $17 to $22.

PLUMBING GOODS.

Few changes in prices are quoted this week. The market is active in all lines of plumbing supplies, and prices seem about stationary for the present. In the pound class of malleable fittings, however, there has been a slight reduction in the price, and they are now discounted at 20 per cent. Other lines are unchanged.

Lead Pipe—This is in good demand. The price of composition is 8c, and of ordinary 7c. The discount is 35 per cent.

Soil Pipe and Fittings—A fairly large amount of business has transpired during the week. Our quotatons are: Light soil pipe, 3 to 6-in, 50 and 10 per cent.; medium and extra heavy soil pipe, 2 to 6-in, 60 per cent.; extra heavy soil pipe, 8-in, 45 per cent. Light fittings, 2 to 6-in, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in, 60 and 5 per cent.; extra heavy fittings 8-in, 45 per cent.

Iron Pipe—There is an active inquiry and a good trade is passing. There is no quotable change. Our quotations are: Standard pipe, per 100 feet, in length under 19 feet—black, 1-8-in, $2.30; 1-4-in, $2.30; 3-8-in, $2.55; 1-2-in, $2.85; 3-4-in, $3.65; 1-in, $5.20; 1 1-4-in, $7.35; 1 1-2-in, $8.95; 2-in, $12.55. Galvanized—1-4-in, $3.20; 3-8-in, $3.45; 1-2-in, $3.90; 3-4-in, $5; 1-in, $7.20; 1 1-4in, $10.05; 1 1-2-in, $12.20; 2-in, $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.: and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in, $4.20; 3-4-in, $5.25; 1-in, $7.55; 1 1-4-in, $10.55; 1 1-2-in, $12.75; 2-in, $17.60. Galvanized—1-2-in, $5.25; 3-4-in, $6.65; 1-in, $9.55; 1 1-4-in, $13.25; 1 1-2-in, $16; 2-in, $21.90. The discount on all sizes of extra heavy pipe is 12-12 per cent.

Solder—The demand for solder keeps up well and a brisk trade is doing. We quote: Bar solder, 18c; wire solder, 18 1-2c.

METALS.

Orders for delivery after navigation opens continue to arrive freely from both Eastern and Western river ports, and rush orders are also numerous. Iron and structural steel have been in good demand, though for railway account there has been but a comparatively small amount of business transacted. There have been no quotable changes. Copper has remained at last quotations, and though quiet on the market is still firm. Lead is also firm in sympathy with New York quotations. Tin is somewhat easier, but prices have been well maintained and no change can be quoted this week.

Pig Iron—This market remains in about the same condition as at our last report. There is little business at present in any line, but some big contracts with the railways and larger foundries are pending for delivery at the opening of navigation. Summerlee is quoted at $20.25 to $20.75 per ton. No. 1 Middlesboro, delivered at opening of navigation is worth $16 on wharf, Montreal, and No. 2 sells at $15.50. Ferrona iron, delivered in Montreal in car lots is quoted as follows: No. 1, $18; No. 2, $17.50; No. 3, $16.50; No. 4, $16.

Bar Iron—A fairly good trade is doing in bar iron and prices are unchanged. We quote: Merchants' bar, $1.75; horseshoe iron, $2; forged iron, $1.95.

Black Sheets—The market is active and unchanged. We quote as follows: 28-gauge, $2.35; 26-gauge, $2.30; 22 to 24-gauge, $2.25; 19 to 20-gauge, $2.30, and 80 to 10-gauge, $2.40.

Steel—Steel continues in good steady demand at the prices here quoted: Sleighshoes, $1.90; tire, $1.95 to $2.10; spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—There has been no change whatever in tool steel. We quote: Black Diamond, 8 to 9c; Sanderson's, 8 to 9c, according to the grade; Jesson's, 13c; Jonas & Colver's, 10 to 20c; "Air Hardening," 65c per lb: Conqueror, 7 1-4c.

Sheet Zinc—There is a fair demand. Sales have been made at $6.15 to $6.25 for cask lots and $6.50 for smaller.

Galvarized Iron—A few good orders have been received this week. Prices are unchanged and we quote: 28-gauge, Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz, $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c extra.

Tinplates—Jobbers report that some sizes of tinplates are almost unobtain-

able from stock, and prices on all lines are very firm. We quote: Cokes, $3.75; charcoals, $4.

Terne Plates—There is no change. For present delivery the price is $6.75, though after the opening of navigation this price would be shaded.

Ingot Tin—Though New York reports quote pig tin somewhat easier there has been no change locally and we quote 32 1-2 to 33c in small lots.

Ingot Copper—Copper has been steady during the week and no quotable change is reported though the tone of the market is firm. We quote 13 3-4 to 14c per lb.

Antimony—There is a steady demand and the price is 8c per lb.

Coil Chain—Chain is moving out fairly well, and the market is steady with prices unchanged. Our quotations are as follows: No. 6, 10c; No. 5, 9c; No. 4, 8 1-2c; No. 3, 7c; 1-4-in, $6.10; 5-16-in, $4.70; 3-8-in, $4; 7-16-in, $3.80; 1-2-in, $3.70; 9-16-in, $3.55; 5-8-in, $3.35; 3-4-in, $3.30; 7-8-in, $3.25; and 1-in, $3.20 with 10c allowance on carlots.

Canada Plates—The market is firm. A fair trade is doing. We quote: 52s, $2.30; 60s, $2.40; 75s, $2.55; full polished, $3.60 and galvanized, $4 to $4.10; galvanized 60s, $4.25 to $4.35.

Pig Lead—The local market continues firm, in sympathy with the feeling in New York. Prices, however, are as yet unchanged, and quotations are $3.40 to $3.50 according to quantity.

Zinc Spelter—We quote 6c.

Scrap Metals—Prices in general are slightly firmer. There is still a good demand for No. 1 cast scrap, but wrought iron is still dull. Copper continues to move briskly and indications are that higher prices will prevail. We quote: Heavy copper and wire, 10 1-2 to 11c per lb; light copper, 10c; heavy red brass, 10 to 10 1-4c; heavy yellow brass, 8 1-2c; light brass, 5 1-2c; lead, 2 3-4c; zinc, 2 3-4 to 3c; iron, No. 1 wrought, $10 to $12; machinery scrap, $15 to $16; stove plate, $12; mixed country rags, 65 to 75c per 100 lbs; old rubbers 5 1-2 to 6c per lb.

HIDES.

Further advances and declines were marked in hides but the normal prices of last week ruled at the close. We quote:

No. 1 beef hides	0 08 0 08½
No. 2 "	0 07 0 07½
No. 3 "	0 06 0 06½
Lambskins	0 75
No. 1 calfskins	0 11

ONTARIO MARKETS.

Office of HARDWARE AND METAL,

10 Front street east.

Toronto, April 2, 1904.

DESPITE the interruption of the holiday, business has been excellent during the past week, the range of orders including practically all seasonable lines. An advance of 10 per cent is noted in all chain quotations. Bolts and nuts are firm, an advance being anticipated. Wire prices are strengthening. Other lines are steady and without change.

Chain—An advance of 10 per cent. is noted in chain, the new prices being, 1-4-inch, $5.60; 5-16-inch, $4.45; 3-8-inch, $3.85; 7-16-inch, $3.70; 1-2-inch, $3.55; 9-16-inch, $3.45; 5-8-inch, $3.35; 3-4-inch, $3.25. A good business is reported.

Lawn Mowers—A good trade continues with prices steady at the following basis of prices: Woodyatt, 10 1-2 inch wheel, $8.50; Star, 9 inch, $7; Daisy, 8 inch, $5.75; Philadelphia, 7 1-2 inch, $7; Ontario, 7 1-2 inch, $15.80; King Edward, 12 inch, $9.50 (14-inch cut in aboce). D. Maxwell & Sons, 10 1-2 inch, $7.50 to $10; 9 inch, $5.50 to $6.25; 8 inch, $4.90 to $5.50. Discount 50 per cent.

Screen Doors—A good business is being done. Prices are nominally unchanged as follows: Common, two or three panel, walnut, 4 inch, $6.50; yellow and green stained, $6.75; in natural colors oil finish, $8.75, with 20c less for 3-inch style.

Screen Wire Cloth—Prices are steady at $1.50.

Spring Hinges—An improved trade is reported with prices steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—Business is improving and prices are strengthening. We quote the following prices: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c per 100 lbs extra charged.

Barb Wire—Trade is moving briskly. Our quotations are again as follows: $2.75 per 100 lbs f.o.b. Toronto, and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—An excellent trade is reported. The market is steady. We quote the following prices: No. 9, $2.70 per 100 lbs, freights equalized with factory points at Montreal, Hamilton, London, Welland or Walkerville and allowance to other points up to 25c; carlots, $2.65, freight allowance to 20c.

Wire Nails—The improvement in the demand continues with prices firm at $2.45 per keg, f.o.b. Toronto, with carlots $2.40.

Cut Nails—There is a fair trade, with prices steady at $2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—A better trade is reported. Prices show no change. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c less.

Horsenails—Orders are coming in somewhat more liberally. We still quote discounts as follows: "C" brand, 40, 10 and 7 1-2 per cent.; other brands, 55 to 57 1-2 per cent.

Screws—A fair trade is doing. Prices are unchanged, yet are decidedly firm. We quote as follows: Flat head bright, 87 1-2 per cent. discount; round head bright, 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—An active demand continues at steady quotations, particularly in belting and coppered and tinned iron rivets. We again quote as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—The market has been gathering strength for some time and is now stiff. Predictions of an advance are rife. Prices are steady: Carriage bolts, common ($1.00 list), 3-16 and 1-4-inch, 60 per cent.; 5-16 and 3-8-inch, 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—A fair movement continues with prices steady. We quote: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; double shingleyarn, 11c; single shingleyarn, 10 1-2c; sashcord 'Hercules,' 30 to 33c; 'Star,' 36 to 38c; cotton rope, 3-16-inch and up, 20 1-2 to 22c; 5 32-inch, 25 to 27c; 1-8-inch, 25 to 28c; cotton twine, 3-ply, 23 to 24c; 4-ply, 27 1-2 to 28c; calking cotton, 16c; cotton waste, colored, 6 3-4c; white 10 to 12c.

Building Paper—Business keeps active with prices unchanged. We quote as follows: Tarred felt, $1.85 per 100 lbs; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry seathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c per roll.

Firebricks—A somewhat better trade is reported. We quote English and Scotch, each, at 28 to 35c.

Cement—No change has taken place since our last quotations. Orders are coming in nicely at the following prices: Canadian Portland, $1.90 to $2.25; American Portland, $2 to $2.10 f.o.b. Toronto.

the reduction is the limitation of business due to the backward season and the possibility of strikes, which would materially reduce building operations. A fairly good trade is recorded though business is interrupted somewhat by the travellers being "in" for the holiday.

Lead Pipe—There is a fair movement at steady prices. We quote: Lead, 7c; lead waste pipe, 8c; discount 35 per cent.

Soil Pipe and Fittings—A moderate trade is reported at steady prices. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-inch pipe 40 and 5 per cent.

Iron Pipe Fittings—The discount on malleable fittings has been increased to 20 per cent. and cast iron discounts have been rearranged. We quote: Malleable fittings, 20 per cent.; cast iron (standard), 57 1-2 per cent.; headers (not standard), 52 1-2 per cent.; flanged unions, 60 per cent.; malleable bushings and plugs, 57 1-2 per cent.; nipples up to 2 inches, 65 per cent.; 2 1-2 to 6-inch, inclusive, 60 per cent.

Copper Range Boilers—A fair trade has been done since the new prices were issued. Discounts at 15 per cent. continue.

Iron Pipe—A reduction in the majority of lines, particularly in galvanized pipe, is noted. We quote f.o.b. Toronto: Black pipe, 1-8-inch, $3.25; 1-4-inch, $2.07; 3-8-inch, $2.25; 1-2-inch, $2.50; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.85; 2-inch, $11.05; 2 1-2-inch, $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25. Galvanized pipe, 1-4-inch, $2.88; 3-8-inch, $3.11; 1-2-inch, $3.42; 3-4-inch, $4.40; 1-inch, $6.35; 1 1-4-inch, $8.80; 1 1-2-inch, $10.75; 2-inch, $14.80.

Enameled Ware—A general decline is noted in enameled baths, with a fair trade doing at the new prices. We quote: "Standard" 5 1-2 feet rolled rim, first quality, at $21.60; second quality, $17.85. There is no change in closet quotations.

Brass Goods—Discounts have been increased on many lines. The cause assigned is the slow trade, business not being so active as was anticipated. The new discounts are given in detail on page 62 of this issue.

METALS.

The feature of the situation is the remarkable firmness in pig iron, steel billets and bars and structural steel. A complete change from the situation as reported a few weeks ago. In the place of a general weakness and uneasiness we now have a firm tone throughout. One of the largest steel importers here received notice this week from the United States Steel Corporation of withdrawal of existing quotations on steel beams, which is direct assurance of an advance in this line. The same tendency is manifested in other iron and steel lines in the United States and the Canadian market can be depended on following up any advance made in the larger markets to the south. Copper is somewhat higher than last week both in England and the United States. Lead

ANOTHER REPORT ON

"ALPHA" HIGH SPEED STEEL

THE JOHN BERTRAM & SONS CO., Limited, Manufacturers of Machine Tools, DUNDAS, Ontario, Canada. Sept., 10th, 1903

Messrs. B. K. MORTON & CO., SHEFFIELD, ENGLAND.

Gentlemen:—

We have tested and used your "ALPHA" HIGH SPEED TOOL STEEL with very satisfactory results. We consider your steel as good as any other of the high speed steels which we have had in use, and can recommend it to anyone as being first-class.

Yours very truly,

THE JOHN BERTRAM & SONS CO., Limited.

OPEN HEARTH STEEL

is unchanged. Tin is slightly lower. Business locally has been somewhat interrupted by the holiday, but the volume is increasing.

Pig Iron—Pittsburg and Glasgow quotations maintain the advances noted last week while Middlesboro iron shows another rise of 9 1-2s during the week. Local quotations are nominally unchanged, but buyers are showing more courage and the producers more firmness, the quotations now being well maintained. Canadian iron is the only kind offering here, the quotations ranging from $18.50 to $19 for No. 1 and $18 to $18.50 for No. 2, f.o.b. Toronto; Midland, $1.50 lower.

Bar Iron—A fairly good trade in this line is reported. Prices are steady at $1.80 f.o.b. Toronto. For extras as cut to length while rolling, 2 feet and over, 10c per 100 lb; 1 foot and under 2 feet, 15c; under 1 foot, 20c; over 20 feet by special agreement according to length and size.

Black Sheets—Orders for both import and stock are excellent. Prices are steady.

Canada Plates—Business is increasing in volume. Prices are unchanged, though firm. We quote as below: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—Prices in both the United States and Great Britain are slightly lower. A fairly good business is reported. Quotations locally are firm but unchanged at 30 to 30 1-2c.

Galvanized Sheets—There is an excellent demand. Prices are steady throughout. Our quotations are as follows: Queen's Head, $4.25 for 28 gauge; American, $.4 for 28 gauge; Bell brand, $4.25 for 28 guage; Gordon Crown. $4.25 for 28 guage.

Tinplates—Prices are unchanged. A larger business from stock than for some time is now reported. Import business is also satisfactory. We quote: Coke plates, bright, 14x20, $3.50; charcoal plates, $4.25.

Copper—Though outside markets are still advancing there is no change here, though a stronger tone is manifested. Locally there is considerable activity in both sheet and ingot and prices are steady. We quote: Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—A good demand for English lead is reported. Canadian lead is also in fair demand. Prices are steady. We quote $3.30 per 100 lb for pig lead and $3.65 for bar lead.

Zinc Spelter—A fair demand at 6 to 6 1-2c per lb.

Zinc Sheets—The market is firm and a fair business doing in small lots. We quote: Cask lots, $6.70 to $7, and part casks $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c, and wiping 17c.

Antimony—8c per lb.

Old Material—Other than an advance of 15c per cwt in lead, prices are unchanged. Dealers claim a fair business doing. We again quote: Heavy copper and wire, 10 3-4c per pound; light copper, 9 1-4c per pound; heavy red brass, 9 3-4c per lb; heavy yellow brass, 8 to 9c per lb; light brass 5 to 5 1-2c per lb; lead, $2.50 per cwt; scrap zinc, 3 1-4c per lb; iron, No. 1 wrought, $10.50; No. 2 wrought, $4; machinery cast scrap, $14; stoveplate, $10; malleable and steel, $4; old rubbers, 5 1-2 to 6c per lb; country mixed rags, 50c per 100 lbs.

TRADE CONDITIONS IN MARITIME PROVINCES.

From the Regular Correspondent of HARDWARE AND METAL

Halifax, March 29th, 1904.

HARDWARE quotations here are without change for the week, a firm tone prevading the entire market. Business is on the easy side and navigation appears but little more advanced than it did ten days ago.

* * *

A. M. Bell & Co. have removed their stock to their new building on Grenville and Hollis streets and their old quarters on Water street present a very deserted appearance. They will, however, be occupied on April 1 by Douglas, Prowse & Co., a new firm about to engage in the wholesale hardware business in this city.

* * *

Halifax had another fire of fairly large dimensions last week, the loss being $25,000, with $15,000 insurance. Two buildings on Water street were destroyed, one being occupied by Charles Brister, dealer in scrap metal and junk; the other by J. F. Crame & Co., wholesale grocers, whose stock also was destroyed.

The provincial axe makers have finally decided not to pay any bonus to the American manufacturers, but will fight the combine independently. The matter was not altogether decided at the recent meeting held ten days ago but the local manufacturers have since made up their minds. They claim to have lost considerable trade despite the price cutting of the Americans, the trade in some places being quoted lower prices than can profitably be named by Maritime Province manufacturers.

It has finally been decided to rebuild the Maritime Nail works at St. John, notwithstanding the tempting proposals of North Sydney, and yesterday a gang of men was set to work on the work of rebuilding. The matter of changing the location was left to the general manager, Eben Parkins, who decided in favor of remaining at St. John. The new plant will have a floor space of 40,000 square feet, which will be considerably larger than that afforded by the old shop. Before the fire it had been decided to engage in the manufacture of screens as well as nails and this will now be carried into effect. Machinery for the screw works was ordered some time ago. For the nail works a portion of the old equipment is still serviceable, but certain new machines will also be installed.

The fact is now established that Sydney steel is capable of being converted into rails of the first quality, a matter of no little moment to the community. The report of the Government inspector regarding the rails recently made in England from Sydney steel is that they are second to none. In fact he considers them better than Bessemer rails. The result of the test removes the last obstacle to the construction of the rail mill and one of a capacity of 500 tons a day will be in operation in the "Iron City" before many months.

Newest Artistic Ideas

Are embodied in the decorations found in our METALLIC ceilings and walls.

They make a most beautiful interior finish and in addition are so practically durable and sanitary that it is easy to understand their immense popularity.

Equally suited for use in new or old buildings.

There's big business in these lines for you.

The Metallic Roofing Co., Limited

TORONTO MONTREAL WINNIPEG

BUSINESS CONDITIONS IN BRITISH COLUMBIA.

By Regular Correspondent of HARDWARE AND METAL.

Vancouver, B. C., March 25.

THE wholesale trade here and all shippers interested in the Yukon trade are very much interested, not to say exercised, this week over the order received by the collector of customs at this port, J. M. Bowell, instructing him as to shipments for Dawson via St. Michael. The order, signed by John McDougald, Commissioner of Customs, is as follows:

"You are advised that the instructions issued in Feb., 1903, for the free entry of Canadian goods carried by foreign vessels from points in B. C., via St. Michael into the Yukon, have not been renewed for the present year.

"Canadian goods desired to be admitted free into the Yukon via St. Michael should therefore be carried only in vessels entitled to participate in the coasting trade of Canada.

"Customs certificates are to be granted accordingly."

The order is dated Ottawa, March 15, and goes into effect at once. The instructions which have not been renewed allowed of the direct shipment of goods via St. Michael from this port and Victoria, to be delivered in Dawson, free of duty. The fact is that it was a practical coasting trade privilege granted to the vessels engaged in the St. Michael trade, there being no Canadian or British bottoms engaged in that trade. As a matter of fact the steamer Alpha, which made a trip three or four years ago, and then ran the gauntlet of the U. S. customs at Nome, is the only Canadian vessel which ever carried cargo to Nome.

The real cause of disturbance among the merchants and shippers is that the privilege of calling here for Dawson bound goods, which is now granted to American vessels, is on exactly the same basis as that to vessels going to St. Michael. Indeed it is more strictly coasting according to the shipping regulations. There is no hint that the privilege of carrying goods from B. C. ports to Skagway for shipment to Dawson will be withdrawn, but it might follow very readily. Were that to happen, the only steamers which are now in the Northern trade are those of the C. P. R. coasting service, and they would be totally inadequate to the task of carrying such a large amount of goods as goes into the Yukon Territory in a short season.

That there will be a large direct loss of trade for B. C. and Canada through the new order is the general conviction. Men who know the trade well point out that in many lines, such as feed for horses, and other rough goods, it will pay to buy in the U. S., pay the duty and then send the goods round by way of St. Michael, as the freight rates that way are very much lower than by the other route into Dawson over the White Pass Railway and down the Yukon River. It is felt that the only beneficiaries under the new regulations will be the C. P. R. and the White Pass and Yukon people. The big trading and transportation companies of Dawson own their own river steamers on the lower Yukon and have many trading posts down the river in Alaska as well as at Nome, so that they take delivery of the goods shipped that way, at St. Michael, transferring them to their river steamers for the haul up the Yukon. They cannot afford to throw these steamers away, and they do not feel like paying the high prices which are to be paid on the other route. The wholesale trade here feels that if this order is followed by another taking away the privilege of shipping in other steamers from here to Skagway, it will seriously hamper trade for not only is the river service of the White Pass unable to cope with the

heavy traffic in the late season, but the C. P. R. coasting service is not by any means equal to the task of carrying from here to Skagway all the goods ordered here.

There is a point in connection with the trade to the Yukon which is worth noting. The White Pass Railway people are striving to get as much as possible of the shipping done early in the season, but it must be remembered that the merchants in the Yukon District cannot afford to buy away ahead, and especially on certain lines such as produce, any more than can people any where else.

* * *

Copper smelting men from all over the Northwest met in conference in Victoria last week over the copper situation and over copper smelting rates, says the Spokane Spokesman-Review. E. J. Wilson, manager of the Northport, Wash., smelter, owned by the Le Roi Company of Rossland, is down to represent his plant. A. B. W. Hodges, superintendent of the great Granby plant at Grand Forks, the biggest copper plant in Canada, is looking after his corporation's interests. Hermann C. Bellinger, superintendent and heavy owner of the Crofton smelter on Vancouver Island, is also here. All report an unusually successful period of smelting.

THE PITTSBURG METAL MARKET.

From The Iron Trade Review, March 31, 1904.

PREMIUMS of $1 to $1.50 a ton are now being paid over pool prices on sheet and tin bars for delivery within 30 to 60 days, and producers having billets for this delivery are also asking premiums of 25 cents a ton. Less than two months ago the competition among the steel producers for sheet and tin bars and billets was exceedingly keen, and there is little doubt that large tonnages were placed below the agreed prices. So completely have conditions changed meantime that finishing mills that did not contract for future deliveries are having much difficulty in securing steel and are compelled to pay premiums. The subsidiary companies of the United States Steel Corporation are out of the market entirely for the present on unfinished steel, some of their finishing mills not securing their full quota. The old Sharon open-hearth plant and the Bessemer plant at Columbus are the only steel plants of the corporation that are idle at the present time. Improvements are being made at Columbus and the plant will be in operation shortly, while the Donora open-hearth plant will be started for the first time shortly after the blowing in of one of the two furnaces of this plant, early next week. The second stack will be ready for operation about a month later. The operation of this steel plant will greatly increase the corporation's steel output, and the new operation will be economical as the direct metal process will be used. There is little demand for steel, however, for shipment beyond June 1, all of the mills being in position to take such business at agreed prices. We note the sale of 1,500 tons of open-hearth sheet bars for delivery in the next two months at $25.25 Pittsburg, and of a lot of 1,000 tons at $25.50, for practically the same delivery.

The German steel syndicate is reported to have made overtures to the leading steel interests in this country and to certain British steel manufacturers with a view to lessening competition. The shipment of American pipes and tubes into Germany is particularly objectionable to the German interests. It is understood that the proposal for an arrangement has received no encouragement from American interests.

The vote that is being taken by the Amalgamated Association on the reduction in wages in the sheet and tin mills will by no means have an overwhelming majority in favor of its acceptance. The returns of the majority of the lodges thus far show an adverse majority and those yet to be received will have to show a large majority the other way to insure the acceptance of the reduction. If the reduction is turned down a strike will be declared at all the sheet and tin plate mills of the American Sheet & Tin Plate Co. as well as at independent plants where a refusal to pay the scales exisiting prior to March 21 is made. While there have been many reports that the American Sheet & Tin Plate Co. has a large stock of tin plate on hand, jobbers and consumers declare that they are unable to secure anything like prompt shipments, while on new specifications deliveries of tin plate are not promised before May 1.

Pig Iron—Transactions in foundry, forge and Bessemer iron have been limited in the past week, the bulk of the buying having been in small lots of foundry iron for early delivery. The market remains firm and on No. 2 foundry prices range from $13.85 to $14 Pittsburg. Quotations on Bessemer and forge iron remain unchanged. Quotations of Southern producers for Pittsburg delivery are again above those of Northern producers. The Southern furnaces generally quote $14.35, Pittsburg. We make the following quotations:

Bessemer, Valley	$13 35 to 13 50
Bessemer, Pittsburg	14 20 to 14 35
No. 1 Foundry	14 25 to 14 50
No. 2 Foundry	13 75 to 14 00
Gray forge Pittsburg	13 25 to 13 50
Chilled basic, Valley	13 25 to 13 50
Chilled basic, Pittsburg	14 10 to 14 35

Steel—Demand for billets, sheet and tin bars for delivery in the next sixty days is heavy and premiums of $1 to $1.50 a ton are being paid on bars, while billets command a premium of 25 cents a ton. A meeting of the executive committee of the billet association has been called for April 14 in New York, but no change in prices will be made.

Bars—Specifications for iron and steel bars are heavy, although little new business is being closed. Bar iron is held on the basis of 1.40c to 1.45c, Pittsburg, for local delivery, while for Western shipment quotations are based on 1.35c, Pittsburg.

Pipes and Tubes—Demand continues heavy for all kinds of pipe and tubing and all of the mills are operating at their utmost capacity. The outlook in the tube trade is unusually bright.

Wire and Wire Nails—An advance of 5 cents a keg was made on both iron and steel cut nails last week and a still further advance will be made at the meeting of the cut nail manufacturers to be held next week. Demand for wire nails and wire products is heavy and considerable new business is being placed. We revise quotations as follows: Wire nails, carload lots to jobbers, f.o.b. cars Pittsburg, $1.90 base, plain wire, carload lots, $1.80 base; barb wire, carload lots, $2.20 base; staples, carload lots, $2.05 keg. Galvanized, 30 cents extra. Carload lots to retailers are held at 5 cents advance in all lines, and on less than carload lots a further advance of 10 cents is charged. Steel and iron cut nails, carload lots, $1.75, and less than carload lots, $1.80, f.o.b. Pittsburg, plus freight to point of destination. Terms, 60 days, less 2 per cent. off in 10 days.

Coke—A better supply of cars is being received by coke shippers in the Connellsville region, although the service is not nearly what is required to move the immense tonnage that is now wanted by the trade. Foundry coke for early shipment is held at prices ranging from $2.15 to $2.50, and furnace at $1.60 to $1.65. During the week ending Saturday, March 19, the production of the upper region amounted to 202,976 tons and the lower region 56,256 tons. The production showed an increase of about 10,000 tons during the week, while 400 additional ovens were fired.

A QUESTION OF CASH DISCOUNTS.

Editor Hardware and Metal:—

In your issue of the 19th of March, page 56, you refer to a question of cash discount. In my opinion in the case you refer to the cash discount should be allowed on the amount covered by the remittance, namely on $4,166.66 2-3, which at 4 per cent. would make $166.66 2-3, or a net amount of $4,000 and the reason of this seems to be very simple, for a cash payment is always the produce of a larger amount which is paid with the benefit of cash discount, consequently in the case referred to the amount paid is only equal to 96 per cent. of the sum on which the cash discount should be allowed. If he does not settle the balance within the time limit and only several months after it is due, he should be called upon to pay interest for the overdue time.

PATENTS IN UNITED STATES.

Capt. Orlan C. Cullen, C.E., L.L.M., makes a specialty of military and naval patents, and is prepared to develop the construction element of such inventions in his shops. All kinds of patent business. Capt. Cullen is in a position to take particular care of any business sent by Canadians.

HARDWARE CONDITIONS IN MANITOBA.

Office of HARDWARE AND METAL
Room 308 McIntyre Block,
Winnipeg, March 28, 1904.

FOR the past week business has remained about the same owing to the uncertainty of the weather and our heavy snowstorms throughout Manitoba. Western Canada has done a great deal towards reducing the volume of trade and our recent blizzard on the 24th inst succeeded in tieing up all traffic and brought business to a temporary standstill. The wholesale houses have, however, all they can do in filling back orders and are very busy.

The market is steady and prices remain about the same with little or no change of any account. We quote:

Barbed wire, 100 lb.	$3 15

SCALES.

Champion Scales

Grocers' Scales

Butchers' Scales

Family Scales

Platform Scales, from 600 to 2,000 lbs. capacity.

Patent Swivel Wheels applied to Platform Scales make it possible to turn scale in any direction within its own length when loaded to full capacity.

Imperial Standard Scales

Hay Scales

Stock Scales

Coal Scales

We handle a complete line of scales, from a small Letter Scale to a great Railway Track Scale, weighing 100 tons.

We also handle all classes of scales for railway use.

All Scales inspected and stamped by Government Inspector. Certificate accompanies each scale.

Dealers, write for our latest Scale Catalog and Price List.

Estimates furnished for installing large scales on application.

CULLEN BALL-BEARING RIFLE GUN.

ONE of the most unique inventions in ordnance is a ball-bearing rifle gun invented by Capt. O. C. Cullen, who commanded a battery in the Spanish-American War. The new principle is the inserting of balls in the grooves of the rifle. It is stated that this is the first radical improvement in rifling since 1852, the ingenuity of ordnance builders being devoted toward developing breach mechanisms and other details of ordnance construction to the neglect of the barrel.

Mr. Cullen states that the new system "increases the velocity, penetration and range from 40 to 50 per cent. according to calibre, decreases all strain upon barrel and breach and absolutely eliminates the recoil. The life of the gun is prolonged indefinitely, as when one set of balls is worn out another can be inserted and so on during the metal fatigue limit of the walls of the grooves. Over 7,000 rounds were fired continuously in one test, without destroying the gun. The elimination of the recoil allows the return to carriages of comparatively simple and cheap construction. The smooth wall projectile is also cheaper than the banded projectile now in use. The decrease in friction in the bore allows a shortening of the barrels as the same rotary motion can be obtained in a much shorter barrel by increasing the helix of the grooves.

"Another important feature is the decrease in the heating of the barrel and breach.

"The gun is recommended unanimously by all the ordnance experts in the army and navy of the United States. It is now being tested by the Japanese Government, so far with the best results.

"In a recent test with three other guns of standard make the Cullen gun made an average velocity of 3,200 feet per second at the muzzle against 1,802 feet per second and 2,050 feet for the three others. The penetration and range was in like proportion."

In addition to heavy ordnance Mr. Cullen is making rifles and pistols on the ball-bearing principle. He is now introducing them to the Canadian trade through Rice Lewis & Son, Toronto.

TO MANUFACTURE NAILS.

The New Brunswick Wire Fence Co., Moncton, N.B., intend very shortly to enlarge their operations, to include the manufacture of nails in the quiet season of the wire fence business. They are also perfecting a new fence, for which they claim especial cheapness combined with great practicability in adjustment and usefulness.

The Library Bureau of Canada, Ottawa, have taken over the hardwood manufacturing department of W. C. Edwards & Co., Limited. They will continue the business of this department and add the complete lines carried by Library Bureau in the States and Library Bureau, Limited (England). In their circular announcing the change they say: "We are the originators of card index and filing systems for business houses and we offer you expert service and high grade equipment that cannot be duplicated."

Banquet of Toronto Retail Hardware Dealers.

AT the second annual banquet of the Toronto Hardware Retailers' Association, the dominent thought was the need of more complete organization on the part of the retail hardwaremen of Canada. Representative wholesalers, manufacturers and retailers were united in the opinion that the existing conditions made it imperative that the retail trade should be organized in order that its rights would be fully safeguarded and its interests properly protected.

The chairman of the evening was Edwin R. Rogers, president of the association. Seated with him at the speakers' table were A. E. Kemp, M. P.; Arch. Campbell, M. P.; Peleg Howland, of H. S. Howland, Sons & Co.; T. B. Lee, of Rice, Lewis & Son; E. C. Boeckh and W. E. Stokes, of the United Factories; G. M. Collins, of the Collins Mfg. Co.; W. B. Rogers and F. W. St. Leger, representing the Retail Merchants' Association. In all there were present over one hundred guests, a most representative gathering of retailers, wholesalers and manufacturers. The excellence of the menu may be judged from the following :

HARDWEAR ME 'N U

Soft Soap
Mulligatawny.
Roast Beef — Spring Lamb
Genuine Razor Back. — Easy Running Mower.
Sugar Cured Ham
Agricultural Furnace.
Saratoga Chips. — Beans
They love to play Poker. — Horse Clippers.
Peas
Pure Paris Green.
Celery — Cheese
$10,000 a Year. — Sanitary Plumbing.
Apple Pie — Lemon Pie.
Rocking Table. — Absolutely Pure.
Ice Cream
Frictionless.
Tea — Coffee
Light and Heavy. — Liquid Burnt Umber.
Lemonade.
Muriatic Acid.
Nuts — Raisins — Fruit
Square & Hex'n. — Jack Screws. — Gem Jars.
Assorted Cake — Cigars
Take it, it's yours. — Iron Finials.

As the cigars were being passed about Chairman Rogers called for order, and after an expression of his pleasure at the representative attendance and a few warm words of welcome to those who had responded to the association's invitation, he read regrets from several friends of the organization, who had found it impossible to be present.

PRESIDENT LEWIS' GREETINGS

F. O. Lewis, president of the Wholesale Hardware Association, in his expression of regret, said :

I wish your association every success, and would add that I am perfectly in accord with an association of this nature, as beyond a doubt they do much to smooth some of the stony paths in business, and the result of social meetings such as this has, no doubt, a very beneficial effect.

Similar expressions of good will were received from James Hardy, secretary-treasurer of the Wholesale Hardware Association; H. T. Eager, of Wood, Vallance & Co.; Cyrus A. Birgem, ex-president of the Canadian Manufacturers' Association; F. H. Whitton, Ontario Tack Co.

After the first toast the "King" had been responded to with musical honors, Chairman Rogers proposed the toast to "Dominion of Canada," calling upon Mr. St. Ledger to respond.

Mr. St. Ledger desired to take the thoughts of his hearers from the exceptional prosperity and unbounded material resources of Canada and to direct their attention to what he considered the greatest factor in the welfare of a nation, the character of its people, the stamina of the race. In Canada a rigorous climate and a widespread respect for honest work, combined with high aspirations and ideals, contributed to develop in the Canadian people character of a forceful type. The merchant was, in supplying the needs of the people following a mission in life and was entitled to a respect which he should demand. He should insist on a margin of profit which would always enable him to meet his obligations. Common honesty demanded that he should ensure 100 cents on the dollar for his creditors before giving bargains or favors of any kind to his customers. The Dominion of Canada developed high ideals and a high code of honor; in short, developed character in her young men. This would make Canada a force in the world as it made Canadians a forceful people where ever they went.

In proposing the next toast, "Our Parliaments," Mr. Rogers expressed the conviction that it was an advantage of no small consequence to the commercial and industrial interests of Canada to have business men like Messrs. A. E. Kemp and Arch. Campbell in the Dominion Parliament. It was beyond dispute that there were many matters of vital interest to Canada which the business men could understand but which would be quite beyond the grasp of the average professional man. He, therefore, held it an especial honor to have Messrs. Campbell and Kemp present to address the gathering. The applause which followed these remarks made it quite clear that this opinion from Mr. Rogers was acceptable to all present.

ARCH. CAMPBELL, M.P.

Mr. Campbell prefaced his remarks with a tribute to the intelligence and good looks of those present, which won general approval. As one looked back over the history of Dominion, he continued, one was soon convinced of the great wisdom of the Fathers of Confederation in their framing the constitution of the Dominion. In a country differing so widely in religion, in race and in ideals, it was particularly hard to guide the ship of state. It was, therefore, a wise decision which gave to the Dominion Government jurisdiction over tariffs, the postal system, the railways and canals, care of the Indians, over militia and defence. These matters must be regulated by a power whose authority is recognized in every section of the Dominion. On the other hand legislation regarding education, licenses of various kinds, the administration of law and order and other such interests, which deal particularly with our daily life and regarding which the ideals in the various provinces vary greatly, have been wisely placed under the jurisdiction of the provincial parliaments. Canada had, too, been fortunate in the men who had guided her destiny. Under such men as Macdonald, Mackenzie, Cartier and Laurier, the Dominion had progressed nobly and would continue to progress. There were always defects; even the sun had spots. There had been election scandals and there would be election scandals. Yet the Canadian parliaments, the Canadian judiciary, the administration of the law in Canada, would stand comparison with any country in the world.

A. E. KEMP, M.P.

Mr. Kemp had especial pleasure in gathering with a representative body of hardwaremen. He had come to the city when 16 years of age, had started life as a hardware clerk and he moved on from that to be a hardware retailer. He felt that such an association as the one he was addressing would have been a great advantage to him at that time and would in the same sense be of value to retailers now in business. The wholesalers and manufacturers had found it to their advantage to get together. They were not too advanced nor too humble to learn. The social element of their gatherings was also important. After all, business men everywhere found men of their own class the most congenial, their society the most attractive.

He felt he could voice the sentiment of Canadian manufacturers in desiring a widespread organization of retailers, a body whose decision could be recognized as the opinion of the retail trade. This would make possible the explanation of much that now leads to misunderstanding. Retailers throughout the country

should recognize that by the provisions of the new assessment bill they only have to pay one-third the proportion of taxes the wholesalers pay, and that they could credit the Retail Merchants' Association as the body that had in this case safeguarded the interests of the retail trade. What they had done in this case could be done in many cases by a stronger, more representative, organization.

Canada was prospering and the retailers had a right to look for a share of that prosperity.

Toronto supplied so many lines to the West that as the West expanded Toronto would grow and the trade of its retailers increase. The class of settlers coming in from the United States was a particularly good one, consisting largely of Canadians who had gone to the United States and were now returning to their native land. They would soon learn the superiority of Canadian laws, of the Canadian constitution and of Canadian justice, and would be an added moral force as well as a material gain for Canada.

He wished he could impress retailers with the desirability of their taking an interest in politics. Party politics had been accepted by those who had studied the effects of the system as well as by the large bulk of the people, as the best for Canada. Then the merchants should be a strong force in the caucus of either one party or the other, making for the purification and improvement of the standard of political life in the Dominion.

This might call for sacrifice, but the cause would be well worthy of the sacrifice. In case, however, they were not ready to make this sacrifice, they should not be too critical of those who probably were sacrificing a great deal to serve the people in the Provincial and Dominion Parliaments.

"WHOLESALE HARDWARE ASSOCIATION."

Chairman Rogers, in proposing the next toast, "The Wholesale Hardware Association," with whom he coupled the names of Peleg Howland and T. B. Lee, said that though some had argued that the wholesale dealer was unnecessary, he felt his hearers would agree that modern conditions necessitated their existence. (Hear, hear.) Their travellers were the good friends of the retailer, their business methods a great convenience to him.

MR. PELEG HOWLAND.

Mr. Howland expressed pleasure at the opportunity to meet the retailers in a social way.

"I certainly consider it an honor," said he, "to be asked to represent the Wholesale Hardware Association, though I have been somewhat puzzled as to why I should have been chosen, when there are others much higher in office in that organization than myself, and who could represent it on an occasion of this kind, much more worthily than I can. However, yours having been the offense and you will be the infliction.

The Canadian Wholesale Hardware Association is now some five years old, or nearly so. It is a comparatively small body, but we claim that it embraces all the legitimate jobbers in the Provinces of Ontario and Quebec. We do not claim that all those who job goods in this line are members, for there are a great many goods jobbed by manufacturers, also by wholesale merchants dealing in some lines that pertain to this business and by the larger class of retail merchants, but, as I have said, we claim to have all the jobbing merchants who may strictly be so called, and we claim therefore to be a body of some influence.

What was the reason for the formation of this association? Those of you who recollect the condition of things existing at the time it was formed will not have far to seek the reason. When I first entered the hardware business,—now a great many years ago, more than a quarter of a century, and though I was a very young man then, to look back makes me feel an old man now,—there were six wholesale hardware houses in Toronto. When this association was formed, there were just two left. The experience of Montreal and of Hamilton was somewhat similar—goods were sold without any regard to the cost of doing business, each merchant seemingly having an idea that there must be some hidden benefit from goods passing through his warehouse, with all the cares and anxieties that I am sure even now some of you do not realize such a process entails. The details of buying, receiving, unpacking, placing on shelves, stock-keeping, sampling, pricing, selling, cataloguing, gathering together, laying off, checking, packing, shipping, invoicing, book-keeping, collecting, paying, anxiety of carrying accounts, bad debts, and many other things which I can not enumerate. Some merchants, too, not content with selling goods at 4 and 6 months' credit, would date several months forward or give cash dircounts as high as 7 per cent. The manufacturers too, foreign as well as Canadian, but more particularly the latter, were selling goods wherever they could at prices so close to those they made the jobbing merchant that even when we were disposed to make a margin it was cut off by this class of competition. Are not these things a sufficient answer to the question I have asked? Something had to be done. After long negotiation and encouraged by what we saw had been done in the United States, we came together with a view of promoting a friendlier feeling with one another, and to try and have some influence on manufacturers and their agents. We have been together ever since, and I think, have been more or less successful. We have made friends with those we looked upon once as business enemies. We have,—though I regret to say we do not all of us always strictly keep our agreements with one another,—I think raised somewhat the standard of business methods

We have in some cases succeeded in getting the manufacturers to increase the differential between the jobbing and retail price to the benefit, I think, of the retail merchant, whom we can not serve properly unless we serve profitably. We have succeeded in inducing the manufacturers to reduce the number of preferred customers among the retail trade, to the benefit we think of 90 per cent. of the retail trade.

We have in some cases succeeded in inducing the manufacturer to abolish the quantity system of selling his goods, again, we think, to the benefit of 90 per cent. of the retail trade.

The quantity system, inducing as it does over-buying, and the consequent cutting of price, and perhaps slow payments, is where carried to an extreme, one of the worst of evils. We have, I will confess it, succeeded in making arrangements among ourselves for a moderate margin, never more, in some cases to my mind, not a reasonable margin on some lines of goods, otherwise yielding much less than the cost of doing business, again I think to the benefit of 90 per cent. of the retail trade.

There is one subject, however, which I regret to say we have not made much progress in, though it has at time come up for discussion, that is, as to encrouching on the retail merchants' field. It is sometimes very difficult to decide in the case of some manufacturers, for instance, as to whether they are entitled to buy from the jobbing merchant, or should go to the retailer. It has suggested itself to me that in the case of Toronto, a committee from your association to whom names might be submitted, would be a great aid in the direction desired.

Now, sir, I have no doubt that your association has done much good, perhaps as much, or more in its way than has ours, and I for one, would like to see you extend your usefulness throughout the province and become a provincial

association. State associations have been successful in the United States. Why not here? There is a wide field for them. There will be considera preliminary expense about the starting of an Ontario association, but once it is going, I am sure it will yield large returns. With a large membership, if your power is used judiciously, and you do not fall into the error of syndicate buying, which will surely lead to disruption, you can regulate both the manufacturer and the jobber so that fair treatment must be accorded you.

Then there is the education and enlightenment that comes from meeting with one another, the learning of new ways of pushing trade, of displaying goods, of keeping and arranging store and stock leading to large indirect returns.

I have found in my experience that one cannot try to assist another in a business way without helping himself. Rivalry in the proper conduct of business is the best kind of competition, and must lead to returns.

A live secretary of an association of the kind can do much towards educating the members to meet their obligations promptly, to carry out their contracts, make their settlements promptly, collect their accounts sharply, get adequate profits, make yearly stock-takings, get rid of old stock, keep sufficiently insured,—some or other of which things are frequently neglected by hardware merchants. The more carefully these things are looked after, the more smoothly your business will run; the more your account will be sought after, and the better the final result. Any way in which you can help the houses from whom you buy will eventually result to your own benefit.

Finally, sir, I desire to say that the jobber fully realizes that his prosperity rests on the prosperity of his customer, the retail merchant, and he will, I am sure, individually and collectively, do all he can to aid in that customer's success.

I thank you all, gentlemen, for your patient hearing, and if I have said anything in the way of a sermon, I am sure you will find my fellow members, if not myself, ready to put into practice what is useful in my preaching.

MR. T. B. LEE.

Mr. Lee was glad to be present, yet thought his pleasure might have been greater but for the fact that Chairman Rogers had intimated that he would expect him to make a few remarks, which was out of his line. "However," he continued, "as a part president of the Wholesale Hardware Association, it affords me the greatest pleasure to express the appreciation we have for the hearty co-operation and support which our association have received from yours. We feel, I may say, that your success is our benefit, just as our success must be yours, and as our interests are mutual, by working together we cannot but bring ultimate profit to all. Now, I cannot tell you all that transpires at our various meetings, but I am justified in stating that many of the troubles you have to contend with are also ours, and we have been striving to obviate same for a long time. One or two I might possibly mention. The regulating of the price of goods to the consumer is possibly one of the foremost.

Now, we do not attempt to say as to who anyone shall sell their goods to, but we contend that it is our privilege to try as far as possible and induce them to make such a scale of prices that, if any one decides to go direct to the consumer, they will do so only on equal terms with the retail merchant who has already bought the same goods from the jobber. Another trouble is the so-called "Wholesale House," who permits the sale of goods to employees of other wholesale houses at wholesale prices. Now, I fail to see why an employee of a wholesale dry goods house should be able to buy a lawn mower, cutlery or any article for his own or friend's use, for the same price as you gentleman, or as in many cases, his sisters, cousins or aunts can get a pair of scissors or a cook stove on the same basis. One of the greatest evils possibly in the line of competition, is the house that issues catalogues or circular price lists. This cataloguing business is ruining the trade, not only in the city but of the whole country, and circulars that are issued by wholesale houses, giving net prices, are causing more trouble still and are like bargain day advertisements of a departmental store. While those circulars are sent, presumedly direct to the retail merchants, they frequently get into the hands of their customers and cause no end of trouble by showing just exactly what you buy the goods for.

As regards the amount of business done by these cataloguing houses, it may be interesting to know that last year it was estimated that the Chicago catalogue houses alone did $60,000,000 worth of business. This is easily accounted for. They cater with cleverly written ads. and cut prices on goods that you establish a reputation for and, by the quantity that they are thereby enabled to purchase, obtain from the manufacturers in some cases lower prices than we, as wholesale jobbers can buy the goods for.

Now, gentlemen, we all have troubles and we all think our own are the greatest, and it has just occurred to me that a little incident that happened some years ago might very well exemplify the fact that the other fellow's troubles are often very much greater than our own. It is not a story but an actual fact, which happened to myself when I was a commercial traveller. I was at that time calling at Exeter. There were very few regular passenger trains on the London, Huron & Bruce at that time, and we generally travelled on a local freight with a passenger car attached to it. Exeter, as you know, is some distance from the station, and the station is on the far side of the track, consequently the bus that we were to drive up in had to wait very often if there was any shunting going on before they could cross the track. This particular evening a number of us got off and stepped into the bus and I noticed incidentally that there was a big strong country lad at the far end of the bus sitting crouched in the corner. One of the party, who was not aware of the cause of the delay, becoming a little anxious to get started, made the remark in an audible tone, "What is the matter, what is the matter?" and, before any of us could get time to reply, in a very sad voice, the country lad said: "I don't know sir, but the doctor says it is either scarlet fever or small pox." Now, it is unnecessary for me to state that we all walked up from the station that night, and concluded there were other people that had troubles worse than ours.

Now, gentlemen, our interests are mutual; to succeed we must be honest with one another. Making misleading statements or sailing close to the wind does not pay; it is unprofitable and, while a man may succeed for a time, he is soon found out. I do not know that I can say much more. I heard this matter discussed when attending a convention of the hardware trade in New Orleans last year, and a little story of how a man can sail close and still at the same time speak the truth may not be out of place here. It was related by a Southern hardware dealer. It appears an old darky came to his priest to confess; being an uneducated man, the father had to ask him various questions, and catecized him very thoroughly; after so doing, he then said, "Well, Sam, have you stolen any turkeys since you were here last?" "No, sir, no sir," the old darky replied. "Well," says the priest, "have you stolen any chickens?" "No sir, no sir." "Sure you haven't stolen any chickens since you were here last?" "Well," he says, "Sam, you can go in peace." The old darky got up smiling

and, as he left the church, looking over his shoulder, he said, "Lord, if he had only said ducks, I'd have been a goner."

Now, gentlemen, I think I have said enough. I thank you again for your courtesy and kindness in inviting me here this evening.

"THE MANUFACTURERS."

A toast to "The Manufacturers' Association" was next proposed by Chairman Rogers, who expressed satisfaction that the manufacturers had adopted the motto "Made in Canada," and were to such a large degree living up to the thought by keeping their quality so high that Canadians were now proud to buy goods made in their own country. C. E. Boeckh and G. M. Collins were invited to respond to this toast.

MR. E. C. BOECKH.

Mr. Boeckh did not desire to make a speech, but rather as a manufacturer to express good will toward the gathering. Retailers ought to be proud to belong to such an organization. He was reminded of the Irishman who was asked what he would be if he were not an Irishman.

"Sure, now," the son of Erin replied, "If I wasn't an Irishman I'd be ashamed of myself."

The retailers who were invited to join such an association, but who refused, should be ashamed not to belong. There was no doubt they would have a greater influence collectively than individually. In union there was strength. The wholesalers and manufacturers would like to meet gatherings of retailers oftener, in social gatherings or in the discussion of matters affecting the trade. They would thus find each other good fellows and would soon remedy any wrong, smooth away the rough places in business.

MR. G. M. COLLINS.

Mr. Collins had ever desired a wider organization of retailers, feeling that the trade would be improved mentally, morally and socially by such gatherings as the one he was addressing. The manufacturers were trying to make good goods, the wholesalers to distribute them most economically. All were anxious to see the retailers prosperous and would gladly do what was possible to further that end.

"THE RETAILERS."

The toast of "The Retail Merchants' Association of Canada" was responded to by W. B. Rogers and E. M. Trowern.

Mr. Rogers gave an historic sketch of the history of the association, showing how for years it had been fighting the battles of the retailers of Canada both in the Dominion and the Provincial Parliaments. In their efforts to get legislation in the Dominion Parliament they had been greatly assisted by Mr. Kemp, whom they had double reason to honor. The trading stamp bill, prepared by their solicitor, had recently been commended by Hon. Mr. Gibson, in the Ontario house, as practically the only successful local option law in the province.

Mr. Trowern, as secretary of the association, expressed appreciation of the presence of members of parliament and of representative wholesalers and manufacturers. Their association, after many years of uphill work, had attained to a large degree of strength and influence. They had done much for the retail trade and would be able to do more. After a reference to Mr. Kemp's assistance in the past he expressed the desire that business men should give support to those who were favorable to them in their efforts to improve their conditions. They intended making a fight to have the fees for the examination of weights and measures abolished, and had received assurance that if this was the general wish of the merchants of Canada the Government would agree to their abolition. The association had reason to be proud of the work it was doing. Mr. Rogers had proven an indefatiguable president, while Mr. Greer as secretary and Mr. Caslor as treasurer had seconded every effort to make the association as strong and powerful as it should be.

"THE COMMERCIAL TRAVELLERS."

"The Commercial Travellers" was responded to by W. J. Hallarn, of the Gurney Foundry Co. Mr. Hallarn spoke in an exceptionally humorous vein. He had, like Mr. Kemp, started his career at the age of 16 years. He had started with nothing and had eventually become a hardware retailer. To be exact he had started with 10c and in four years had owed $13,000. He had graduated from the store to the road. The traveller was the mouthpiece, the very bone and sinew of the commercial organization. He was confident the travellers would like to see the retailers organized. Personally he believed it would be an advantage if every manufacturer and wholesaler in the country could be present at one of these banquets, to meet and see what a fine body were the retail hardware merchants.

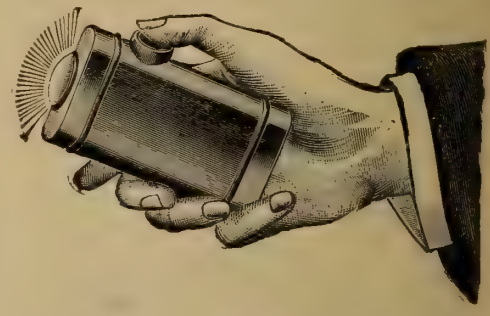
"THE PRESS."

In proposing the toast "The Press," Mr. Rogers said: "We have with us the representative of the paper that has done a great deal of good to the trade and has even been the loyal friend of the retailer. The retailer who does not read Hardware and Metal must get behind the times. Its news service and its market reports are so valuable that none could afford to miss them." D. O. McKinnon responded to the toast on behalf of Hardware and Metal.

"God Save the King" closed an enjoyable evening.

ELECTRIC VEST POCKET LIGHT.

The American Electrical Novelty and Mfg. Co., 232 McGill street, Montreal, are offering the Every Ready vest pocket light here illustrated. It is especially serviceable for merchants and clerks in entering warehouses and cellars as well as for tourists or travellers, as it can be placed under the pillow for instant use. It is very compact, weighing but 7 ounces and measuring, over all, 3 3-8x2 5-8x15-16 inches. The body is black with ends of nickel plated brass. In one end is an electric light bulb with reflector and bull's eye lens the light being supplied by two cylindrical dry batteries, the necessary circuit being closed by pressing the push button as shown. This device gives a generous light, the batteries being renewable at nominal cost, and easily obtained from any of a large number of depots handling their goods, of which there is a large line of the same general character.



Ever Ready Vest Pocket Light.

BABBITT AND ANTI-FRICTION METALS.

Probably the oldest firm in Montreal manufacturing babbitt and anti-friction metals is that of George Langwell & Sons. The business is under the direct supervision of the proprietors, who are eminently practical men with a thorough knowledge of the processes of manufacture. In business for several decades, this firm have won the confidence of the wholesale houses who handle their goods and of the consumers who use their metals. "Neither fictitious nor exorbitant," they advertise their anti-friction metals to be. They are not fictitious; that is, they are exactly what they are said to be. They are not exorbitant; the prices are moderate.

NEW ERA PREPARED HOUSE PAINTS.

High Grade. Thoroughly reliable. Strictly first-class. Made from Pure White Lead, Oxide of Zinc, Pure Linseed Oil, Turpentine, and Turpentine Japan Dryers. Will cover more surface, last longer, hold its color better, stand weather changes, and give more brilliant finish than any other paint.
Imperial measure, gallons and fractions thereof.

PAINT, OIL AND BRUSH TRADES

THE CANADIAN CONSOLIDATED OIL COMPANY.

THE event of the week in the paint and oil trades is the organization of the Canadian Consolidated Oil Co., Toronto. This organization is virtually a merger of the Canadian Consolidated Oil Co., the Canadian Oil Refining Co., the Sun Oil Refining Co., of Hamilton, the Grant-Hamilton Oil Co., of Toronto, the intention being to carry on the business of an oil producing, refining and manufacturing company in all branches with incidental and subsidiary powers. The capital of the company is $1,000,000.

The provisional directors of the company, as announced in the Ontario Gazette, are John Kerr, capitalist, Petrolea; Ernest R. Clarkson, manager, Thomas Ramsay, hardware merchant, and Leopold Bauer, capitalist, of Hamilton; David B. Hanna, railway manager; John J. Main, superintendent; William D. Lummis, lumberman; Thomas H. Hamilton and Jospeh Wright, managers, and William P. Bull, of Toronto: William J. Lovering, of Coldwater; James Playfair, of Midland; William J. Sheppard, lumberman, Waubaushene; William Irwin, lumberman, and Robert R. Hall, barrister-at-law, of Peterboro'.

In view of the above organization it is interesting to note that during the last few days two largely signed petitions have been presented to the Dominion Parliament asking for a reduction of the duty on crude petroleum from 5c per gallon to 2c per gallon.

The reason given for the reduction is that it would lead to the establishment of several more refineries in Canada and the consequent extension in every way of the Canadian oil industry while the 2c duty, the superior quality of their product and the saving of freights would be ample protection to the crude oil producers. It is pointed out that owing to a reduction of output by those interested the output of the Sarnia refinery has been greatly reduced, its pay roll now being less than oue-quarter what it was some time ago.

Turpentine Lower.

YESTERDAY'S naval stores market showed a firmer tone throughout, and while buying was not over active prices ruled higher. Spirits turpentine was unsettled with holders asking from 58 1-2c to 59 1-2c, as compared with 61c last week. The Savannah market was quoted unchanged at 58c, which price, according to advices, was maintained solely by the bullish operations of the Standard Oil Company, as it had been for several days past. There was but little if any improvement in the demand, and business outside of jobbing lots was dull. The stock held in yard was fair and well able to take care of the call made upon it. Early in the day spirits were obtainable at 58 1-2c, after which holders became conservative and instead of offerings being made bids were solicited. This was apparently due to a rumor in circulation to the effect that the low offerings of spirits at 64 1-2c had been withdrawn. This statement, which could not find confirmation, was variously received, but in most cases it was discounted by dealers.

A decline of 2c is noted in the local market this week, making the price for single barrels 88c in the cities and 90c for delivery outside.

Paint and Oil Markets

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 31, 1904.

A SLIGHT weakness has developed this week in both linseed oil and turpentine. The former is being offered by some houses at a reduction of one cent per gallon for April and May delivery. It is thought, however, that linseed oil may recover slightly but the indications point to a further weakness in turpentine. This weakness is no doubt due to the fact that the Spring crop is now in sight. If further concessions are made—and it is probable that there will be further reductions soon—turpentine should be used much more freely. For several months, sales have been very light because of the high price and some buyers have been seeking substitutes. There is an exceedingly bare market for gum shellacs and shellac varnishes are firmly held at an advance. One manufacturer says he is seriously considering the advisability of withdrawing all quotations and accepting orders only subject to the market. The general volume of business is fair. We quote:

Ground White Lead—Best brands, ernment standard; $4.50; No. 1 Government standard, $4.50; No. 1 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead—$4.25 in casks, and in kegs $4.50.

Dry White Zinc—Pure dry, in casks, 6 1-4c; in 100-lb kegs, 6 3-4c; No. 1, zinc, in casks, 5 1-4c; in 100-lb kegs, 5 3-4c.

White Zinc—(ground in oil)—Pure, 25-lb irons, 8c; No. 1, 7c; No. 2, 6c.

Putty—We quote: Bulk, in barrels, $1.50; in 25-lb tins and irons, $1.85; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7c; 100-lb kegs, 7 1-4c; smaller quantities, 8 1-4c.

Red Leads—Genuine red lead, in casks, $4.25; in 100-lb kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks, $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge—Ground, casks, 5c; in less quantities, 5 1-2c; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 47 to 48c; 5 to 9 barrels, 46 to 47c; boiled, 1 to 4 barrels, 50 to 51c; 5 to 9 barrels, 49 to 50c. Delivered in Ontario between Montreal and Oshawa at 2c per gallon advance.

Turpentine—Single barrels, 89 to 89 1-2c.; 2 to 4 barrels, 88 to 88 1-2c. Standard gallon of 8.6 pounds.

Shellac Varnish—Pure white, $2.85 to $3.50; pure orange, $2.75 to $3.40; No. 1 orange shellac, $2.45 to $2.60.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil—8 3-4 to 9 1-4c in wholesale lots, and 1-2c additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c; 25-lb drums, 15 1-4c; 1-lb packages, 16c; 1-2-lb packages, 18c; 1-lb tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c per lb; 25 lb drums, 15 1-2c; 1-lb paper boxes, 16c; 1-lb tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

Ontario.

Office of HARDWARE AND METAL,
10 Front Street E.
Toronto, March 25, 1904

WHILE business is somewhat livelier than last month the volume being done is considerably less than jobbers have been expecting. Turpentine continues to weaken in the South and another drop of 2c is reported on this market. Linseed is steady at last week's figures. Other lines are nominally steady. We quote:

White Lead—Ex-Toronto, pure white lead, $4.65; No. 1, $4.20; No. 2, $3.90; No. 3, $3.50; No. 4, $3.25 in packages of 25 lb and upwards; 1-2c per lb extra will be charged for 12 1-2-lb packages; genuine dry white lead, in casks, $4.50.

Red Lead—Genuine in casks of 560 lb, $4.25; ditto, in kegs of 100 lb, $4.50; No. 1, in casks of 560 lb, $3.75 to $4; ditto, in kegs of 100 lb, $4.25.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

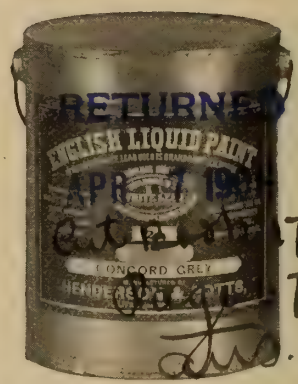
Shingle Stain—In 5-gallon lots, 60 to 85c per gallon.

Paris White—90c to $1 per 100 lb.

Whiting—60 to 65c per 100 lb; Gilders' whiting, 75c.

Shellac—Pure orange, in barrels, $2.50 to $3; white, $2.50 per gallon; No. 1, $2.37 1-2, including price of can.

Linseed Oil—Raw, 1 to 2 bbls, 48c; boiled, 51c; 3 to 5 bbls, raw, 47c; boiled, 50c; 6 to 9 bbls, raw, 46c; boiled, 49c; delivered, Toronto, Hamilton, Lon-



Send us a post card and let us tell you all about them.

ANCHOR and ENGLISH

LIQUID PAINTS

occupy a unique position among the different brands upon the Canadian market. They stand alone at the top, unrivalled for covering power, permanency of color, and wearing qualities. The only white lead used in their manufacture is the best the world can produce—**Brandram's B. B. Genuine.**

don and Guelph. One firm is quoting raw, 1 to 4 bbls, 47c; boiled, 50c; 5 to 9 bbls, raw, 46c; boiled 49c; 10 bbls and over, open; ex-Toronto, 2 per cent. off 30 days.

Turpentine—Single bbls, 88c; 2 to 4 bbls, 87c; 5 bbls and over, open Toronto, Hamilton, London and Guelph, with 2c extra for delivery outside. One firm quotes: Single bbls, 91 1-2c; 2 to 4 bbls, 90 1-2c, delivered; 5 bbls and over, open, ex-Toronto with 2 per cent. off 30 days. For less quantities than barrels, 5c per gallon extra will be added, and for 5-gallon packages, 50c and 10-gallon packages, 80c will be charged.

Glues—Broken sheet, in 200-lb bbls, 8 to 8 1-2c per lb; cabinet glue, in bbls, 11 1-2 to 12c; emery glue, in bbls, 17c; bookbinders', ground, 10 1-2c; finest American, white, 19c; No. 1 American white, 15c per lb.

Putty—Common, $1.65; pure (linseed oil) bladders in barrels, $2; bladders, in 100-lb kegs, $2.25; bulk in barrels, $1.75; bulk, less than barrels and up to 100-lb, $2.

Plaster Paris—New Brunswick, $2 per bbl.

Liquid Paints—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

Barn Paints—65 to 70c per gallon.

Castor Oil—English, in cases, 7 1-2 to 8c per pound, and 8 1-2 to 9c for single tins.

English Paris Green — Petroleum bbls, 13 1-4c; arsenic kegs, 13 1-2c; 50 to 100-lb drums, 14c; 1-lb packages, 15c; 1-lb tins, 16c; 1-2-lb tins, 18c.

Canadian Paris Green (present delivery)—Petroleum bbls, 13 1-4c; arsenic kegs, 13 1-2c; 50 and 100-lb drums, 14c; 1-2-lb tins, 18c.

St. John, N.B.

This has been a quiet market for osme time, at least as far as changes in price go. It is not expected that burning oil will show much change at this season, when the demand falls off. Paint oils which have a free sale at this season, keep low, except turpentine. Lubricating oils receive much attention; with these it is a question of quality. Cod liver oil, which has ruled high, is much lower, though still well above the average.

Window Glass.

MONTREAL.

There is a good movement from stock this week. Prices remain steady at former quotations which are: First break 50 feet, $1.70; second break, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

A moderately active business is reported, prices being unchanged. We quote: Star, first break at $3.10 per 100 feet and Double Diamond, first break, at $5.10. Discount 15 to 20 per cent.

Signs of Spring.

SIGNS are not wanting that Spring is at hand, especially in the vicinity of the Canada Paint Company's Montreal works.

Owing to the breaking up of the roads a tin of vermilion fell out of one of their delivery wagons into a pool of water. The slip cover slipped off and the puddle was dyed a rich vermilion hue. A wag promptly placed a sign upon the spot which read:

SCARLET LAKE.
No Bathing Allowed!

Little rivulets from the rapidly melting snow would suggest to a stranger that water power for electric purposes and mill privileges were abundant. A barrel organ comes along and plays sweetly:

Spring, Spring,
Gentle Spring.

A noisy boy passes along whistling "Hiawatha" (Higher Water!) and another boy reaches for a brick to violently suppress these mirthful effusions.

Fur coats have all been "called in" and umbrellas distributed. The young ladies "with the stylish hats and big white feather, wear gaiters during the sloppy weather." No more does the "cawld blast" from Mount Royal cut the cheek of the city traveller, but the festive rain drop courses down the back of one's collar. There are other signs which the gentle reader will notice should he be unfortunate enough to stand too near a snow-laden roof!

A Reason or Two

Why every dealer should stock **CHURCH'S COLD WATER**

ALABASTINE

Because it has an established reputation—always working to the satisfaction of the user—and possesses every advantage necessary or desirable in a material for wall-tinting and decorating.

Because by a thorough system of advertising **everybody that reads** knows about **ALABASTINE,** and when in want of anything to fix up walls, calls for it as naturally as for any staple in the hardware, dry goods or grocery line.

Because of its convenience, and its permanent and sanitary features.

Mr. M. B. Church, the original inventor of **ALABASTINE** and now President of this Company, was the first to produce a practical wall-coating adapted for use in **cold water,** a process patented in Canada and other countries, that has forced the manufacturers of hot water preparations, at the risk of patent infringements, to imitate his example.

ALABASTINE is for sale by Wholesale Hardware and Paint Dealers everywhere. Also by

History of Wall Paper.

ALMOST all the earliest examples of wall paper in use are to be found in China. In some of the Chinese provinces wall paper has been used for several centuries. In Europe the idea of having colored paper hangings for walls was first taken up in England. These coverings were made to imitate as closely as possible the velvet wall hangings of the great Genoese and Florentine merchant princes. They were introduced into the homes of wealthy Englishmen, and the conventional patterns chosen were rarely altered or changed.

The method by which the paper of our forefathers was manufactured differs considerably from the rapid manner in which the beautiful wall papers of today are turned out. The patterns were first cut in relief on wooden blocks, of which there was one for each color. The blocks were some 21 in. wide, and considerable care was taken that the various colors should register exactly. The pattern was printed off by hand on small square pieces of paper.

"Flock" papers, which were used a great deal early last century, were manufactured in quite an ingenious manner. After a design had been printed, the flock, i. e., wool of the necessary color, cut very fine, or else metallic powder, was sprinkled evenly all over the paper. This adhered only to the pattern of course. When a well-marked relief was required the process was repeated, and the whole thing pressed between the rollers.

Until a comparatively recent date, a great difficulty lay in producing more than three or four colors. This difficulty has now been removed by the invention of marvellously intricate machines, which will print dozens of colors all at once.

Hints for Display.

AS very much of the success of the wall paper department depends upon the care that is given their display, it is important that the merchant and window dresser devote some of their time and ingenuity to thinking out schemes that will be effective. While at first thought there seems to be few designs available in the display of wall paper, there will be found after one or two arrangements, that many others present themselves in rapid succession. The designing of the first two or three displays is the most difficult.

A good plan is to hang a roll of wall paper from the ceiling at the back of the window, dropping to the floor, and over this but falling a shorter distance as each paper is put on to hang the border and then the ceiling. Another paper can be worked in by showing the bottom one as intended to run only as a dado, and above this a centre wall paper to extend to the moulding, and then the freize and ceiling. The two first papers where one is supposed to extend up six or seven feet in the room and the second, a flaring conspicuous design, the remaining distance to the ceiling, can be shown together. In front of these rolls hanging the back, can be set up the regular display stands, showing almost the same scheme except that no more that three papers and preferably two, should be used on the one stand. The upper samples look best if allowed to hang in a fold rather than in a straight end.

Be sure that the colors in adjacent samples do not clash too much, and that the different papers hanging over each other are a good match.

THE "IDEAL" WIRE FENCE.

Hardware dealers are becoming exceedingly interested in the subject of woven wire fencing. The popularity of this style of fence and the steadily increasing demand for it, have created a profitable department in the hardware dealer's business. The "Ideal," made of No. 9 hard steel wire throughout, is claimed to be strong, durable and economical to an exceptional degree. These claims are demonstrated by its increasing popularity. Owing to the great demand for "Ideal" fencing, the manufacturers, the McGregor-Banwell Fence Co., Limited, of Walkerville, Ont., have been obliged to double their capacity.

RESOURCES OF THE OTTAWA VALLEY.

IN a speech before the Unity Club, Ottawa, W. P. Hinton, of the Canada Atlantic Railway, paid the following tribute to the resources of the Ottawa Valley: "The magnificent and as yet almost unrealized wealth in hard woods of the Ottawa valley, gives great possibilities for furniture and similar wood-using industries. This must in the near future rival the saw-mills that now manufacture pine and spruce lumber almost exclusively. In minerals we have not yet begun to realize the wealth of the district, small operations only having been conducted in mica and feldspar mining. Vast deposits of iron, graphite, asbestos, phosphates and other minerals exist in great abundance. Iron ore exists in endless quantities and can be treated electrically in the same way as similar ores are in Germany. The mineral wealth of the Ottawa valley must some time produce great industries in this locality."

STOVES AND TINWARE.

Oil, Gas and Gasoline Stoves.

ALREADY the salesmen for the manufacturers of gasoline stoves, blue flame oil stoves and gas stoves have made their first visits and brought to the attention of their customers the line of goods for the year, notes the Metal Worker. In not a few instances they have brought away with them substantial orders, particularly from the jobbing trade. It is not too early to place orders for this kind of stock, as all the new goods in this line which are likely to make their appearance for the year can now be seen by means of photographs either of the original article or of the patterns from which it is to be made. Not a few salesmen, moreover, have travelled with samples in order that those from whom they seek orders may know exactly what they are buying.

A very much larger use has been made throughout the country during the year of gas, oil and gasoline for fuel than was customary before the recent coal strike. This should have a beneficial effect on the sales this year of stoves adapted to these fuels. Where gas is not available many have been led to see the benefits of using liquid fuel. The fact that many farmers have found the blue flame oil stove and the gasoline cook amply sufficient for their Summer cooking is a help when the stove dealer is endeavoring to sell these articles to other farmers and their wives. The simplicity of operation of the best types and the fact that these stoves are now so made as to give excellent service indefinitely are further recommendations in favor of these Summer cooking stoves.

DISPLAY SUMMER COOKS.

Inasmuch as the space in the show room that has been heretofore occupied with parlor heaters is no longer productive of seasonable trade, it is advisable to have a few of the Summer cooking goods brought in early to take their place on the sample floor. Thus the time before hot weather sets in can be utilized for bringing them to the attention of prospective purchasers by showing the stoves in operation and giving full information in regard to them. Many stove dealers have made these cooks a part of their lines for many years, but there are others who have hitherto hesitated to take up their sale who can begin to do so this year with advantage. The introductory period for liquid fuel stoves has long since passed. The practicability of the apparatus has been demonstrated, and, notwithstanding the attitude taken by some insurance companies, their safety has been proved, particularly when used according to directions.

GAS STOVES.

In many sections the gas companies practically decide whether the stove dealer can handle gas stoves with profit. But even if these companies are introducing gas stoves by selling them at cost prices the stove dealer can sell a few hot plates on a narrow margin of profit, and by this means secure an opportunity of doing some gas fitting for customers, or he can handle a high grade gas range that is not sold by the gas company, and through good salesmanship can secure a satisfactory profit on its sale. It is not best to avoid entirely the handling of gas stoves, even if the gas company may make it unprofitable. The stove dealer can gain many a good customer by being better trained to satisfy gas stove buyers than the clerks of the gas companies. One stove displayed with a sign to the effect that its operation for greatest economy and best results will be fully explained free of cost, will help sell many a saucepan or other piece of kitchen furniture. Ovens, steamers, broilers and other utensils adapted alike for gas, oil or gasoline stoves, have proved profitable sellers when displayed and when a courteous explanation of their advantages is given to shoppers.

Notes of the Trade.

Kingston tinsmiths are demanding that they be allowed to withdraw from all jobs on which non-union men work, and that the work be not finished by apprentices as has been done. All work must be performed by union men. The employers demur and offer other terms, but the men are standing out.

Clare Bros. & Co., stove manufacturers, Preston, Ont., will this year add to their extensive works new pattern shops and a three-storey stone steel range department, 60 feet square. Some of the work thereon is now being prosecuted and all the extensions will likely be finished by mid-Summer. The firm are doing a large, increasing business, and their outlay this year will include a considerable sum for new machinery. —Galt Reporter.

HEATING AND PLUMBING

TORONTO SUPPLY MEN BANQUET PLUMBERS

ONE of the most successful social gatherings ever enjoyed by the plumbing fraternity was the "At Home" given by the Toronto manufacturers and supply men to master plumbers of Toronto and other cities on Wednesday evening.

For some time the Toronto Master Plumbers' Association have been entertaining their members and the supply men once a month and the latter decided some time ago to return the compliment this week. A huge success was the result.

A. A. McMichael, of the James Robertson Co., was the chairman of the evening, a fact which of itself guaranteed a live entertainment.

The Toronto master plumbers were present en masse, led by their popular president, Robert Ross, and their indefatigable secretary, W. H. Meredith. In addition to them were the following from outside:

R. Cotter and John Hooper, Winnipeg.
Ald. Hugh Wallace and And. Rodgers, Hamilton.
S. Ryding, J. Lowdnes and J. Patterson, Toronto Junction.
James Boxall, Lindsay.
Henry Mahoney, Guelph.
George Melwood, Port Hope.
J. Conrad, Waterloo.
R. S. Sturgeon, Peterboro'.

The turnout from the supply houses was equally representative, among those present the following being noted:

T. B. Alcock, E. J. Brewer and W. L. Helliwell, of The Gurney Foundry Co.
A. A. McMichael, H. S. Harwood, B. J. Morris, J. M. Owston and E. A. Rogers, of The James Robertson Co.
P. McMichael, W. J. Cluff and R. J. Reid, of The Dominion Radiator Co.
Chas. E., R. A. and F. G. Morrison, D. World, J. T. Peacock and S. T. Hadley, of The James Morrison Co.
W. S. Jackson, of The Ideal Mfg. Co.
W. A. Porter, A. C. Ormiston and Geo. Howard, of The Ontario Lead and Wire Co.
J. H. Paterson, of The Toronto Hardware Co.
H. T. Bush and A. D. McArthur, of The Standard Ideal Sanitary Co., Port Hope.
H. W. and L. L. Anthes, of The Toronto Foundry Co.

The early part of the evening was devoted to refreshments and music, the McConkey buffet being put to its best in the determination to satisfy and delight the "inner man," while a strong array of professional talent, backed up by such singers from among the plumbers as Messrs. Beavis, Lowdnes and McMullen, under the skilful guidance of W. S. Jackson, provided a variety of popular music which kept the enthusiasm up to the highest pitch.

While the meeting was essentially a social one Chairman McMichael delighted the gathering with an impromptu programme of addresses which were of the bright, cheery, brotherly type, and which did much to develop that strong feeling of good will that has existed between the master plumbers and the supply houses for a long time.

Messrs. R. Ross, J. B. Fitzsimons, F. Armstrong, W. H. Meredith, R. W. Harrison and J. J. McKittrich spoke on behalf of the plumbers, while J. H. Paterson, P. McMichael, L. L. Anthes, W. A. Porter extended greetings from the supply men.

The speeches were brim full of stories such as only a plumber can tell successfully, yet the purpose of these meetings was not neglected. In fact, everything counted together, this meeting and the convention in Hamilton on Good Friday of the Ontario Provincial Association will probably do more than anything yet to solidify the organization of the master plumbers of the province.

NOTES.

W. H. Carrick, of the Gurney Foundry Co., who was unable to be present, was missed.

Regret was expressed at the illness of Fred Somerville, of the Ontario Lead and Wire Co., in Ottawa, of tonsilitis.

N. D. Kuhlman, representing the stationary engineers of Toronto, distributed the "glad hand" freely.

"Ald." Wallace, of Hamilton says trade is slow there just now, but predicts a big business in the Summer. "We are prepared to give the boys a good time when they come to the convention," he announced.

J. Conrad, of Waterloo, reports business rather dull there this season. "The high prices and wages have frightened builders and the only buildings put up are likely to be those absolutely needed."

R. G. Sturgeon, of Peterboro', was enthusiastic over business prospects. "Peterboro' is booming," he declared. "Building is active; we are going to organize next week, so we are all happy."

Geo. Mewood, Port Hope, predicts a good season in his town. "We are looking for a steady building year and expect to have lots of work to keep us going."

Harry Mahoney, of Guelph, had found trade opening up very slowly, but was confident that a few weeks would show a change for the better. "The prospects are all right," he declared.

"The keynote of the whole affair," summed up T. B. Alcock, of Gurney's, "was in the speeches of Messrs. Harrison and McKittrick. The plumbers are uniting to improve the class of work done and to prevent the irresponsible man from doing harm. This is certainly in the interest of the Canadian manufacturers and supply men and they intend to stand by the masters in every way to help them do it. The master plumbers appreciate this loyalty and say 'Canada first, Canadian goods first, Canada first, last and all the time.' And they practise it, too." ("Hear, hear," from several in the group surrounding Mr. Alcock as he speaks.)

"I came East for a rest," said Mr. Cotter, of Winnipeg. "But I am getting entertained so well that I am afraid I will have to go home to get the rest."

"Say, fellows," said one enthusiastic plumber, "McMichael is almost as good a chairman as Ross is a president."

Messrs. Cotter and Hooper speak well of the prospects in Winnipeg. Mr. Cotter, who is a member of Cotter Bros., predicts a big year in plumbing and heating business. His own firm is already busy, having the plumbing in the Union Bank building, which is to be a fireproof structure, costing over $400,000. Mr. Cotter expressed confidence in the

It would probably be an easy matter for you to install a steam or hot water heating system in a building for less than what the Oxford System would cost. But are you only looking for one order? The systems comprised of

Oxford Radiators and Oxford Hot Water or Steam Boilers

are the kind that give satisfaction. They will live a credit to you. Their good qualities in operation are a standing advertisement for you. Let's talk it over.

The Gurney Foundry Company, Limited,
TORONTO WINNIPEG VANCOUVER

The Gurney-Massey Company, Limited,
MONTREAL

plumbing organization in Winnipeg. "We are getting all the masters into our association," he said, "and we intend to do away with the gripsack plumber who is a menace to the legitimate master plumber and a nuisanse to the supply man. Mr. Hopper, who is one of Winnipeg's progressive architects, says that an enormous amount of building will be done there this year. "We will do 25 per cent. more building," said he, "than last year, when we did fully $5,000,000 worth. And the plumbers do a high grade of work there. For instance iron drains are demanded there whereas tile drains may be put down in Toronto.

The H. R. Ives Co.

A REPRESENTATIVE of Hardware and Metal recently had the pleasure of a visit to the foundry of H. R. Ives & Co., Montreal. Conducted by Mr. Ives he soon found that the establishment is one of the largest a.. most complete in Montreal. Few people who have not made an inspection of the buildings have any adequate idea of the extent of these works. Situated on both sides of Queen street, and connected by an overhead bridge, they occupy a much greater area than the casual passer-by ever imagines.

Perhaps H. R. Ives & Co. are best known as the manufacturers of brass bedsteads and as a matter of fact their bedstead business is the largest single item on their list. It would be a mistake, however, to suppose that their business is confined to this line, as they manufacture many hardware specialties. Architectural iron work of various kinds is also an important line to which they devote much attention. Iron fences and gates of an ornamental character are manufactured by this firm and also the iron cages and gates of elevators. The foundry is a large one and complete in all respects.

The Plumbers' Convention.

Before this issue of Hardware and Metal reaches its readers the annual convention of the Ontario Plumbers' Association will have been completed in Hamilton, Ont. The executive meets on Thursday evening, the general convention all day Friday, ending up with a banquet in the evening.

New Prices on Plumbing Goods.

A new list has been issued on plumbing goods, changes being shown in almost every line. In compression and fuller work a reduction is made in most lines. In galvanized iron pipe moderate reductions are reported. In "standard" enamelled baths prices are $1.40 to $2.15 lower. In fittings the discounts are entirely rearranged. For further particulars see our market reports.

Building Permits Issued.

TORONTO.

R. Smith, a two storey brick dwelling on Given street, to cost $1,000.

M. A. Cousins, a two storey store and dwelling on Eastern avenue, to cost $1,800.

Melfort Bolton, a one storey brick shop on 594 Yonge street, to cost $1,050.

S. Smith, erection of a two storey dwelling on Brooklyn avenue, to cost $1,500.

B. H. Morehouse, a two storey and attic brick dwelling on First avenue, to cost $2,400.

Morris Reid, a one and one-half storey Summer dwelling on Lee avenue, to cost $1,100.

E. Morgan, alterations and additions to liquor store on 473 Queen street west, to cost $1,500.

Albert Kleirer, a one storey brick addition to warehouse on 6 Wellington street E., to cost $2,500.

H. C. Stevens and T. W. Dutton, a pair of semi-detached dwellings on Jameson avenue, to cost $6,000.

Educational Publishing Co., a one storey brick warehouse and office on Shuter street, to cost $3,000.

Samuel May & Co., alteration and underpinning factory on 102 and 104 Adelaide street W., to cost $3,500.

B. Brick, three pairs of semi-detached, two storey brick and roughcast dwellings on Bolton avenue, to cost $6,000.

J. J. Walsh, four pairs of semi-detached, two and one-half storey brick and stone dwellings on corner of Beatty avenue and King street, to cost $2,800.

MONTREAL.

A. Lemieux, 890 St. Denis, for alterations to 251 Duluth, to cost $500.

S. Kolber, 689 St. Laurence, for alterations to 689 St. Laurence, to cost $3,000.

Estate James Price, 26 St. Phillip street, to erect at 592 Papineau; a stable; dimensions, 29x16, to cost $1,000.

Ed. Ray, 470 Lafontaine Park, to build on St. Edward street, two three storey third-class houses, each forming three dwellings, dimensions 22x40, to cost $1,500 each.

Building Notes.

Additions costing $15,000 are to be made to the Nathan block, Victoria.

John Ferguson, ex-M.P., intends erecting a residence in Truro, N.S.

Wm. Brill, Sand Point, Ont., is asking before April 11 tenders for the erection of a brick school.

Building prospects are excellent in Montreal and an excellent season may be expected if the trade unions do not make trouble.

Rev. Canon Michael has donated $5,600 toward the erection of a hospital for Buskingham, Que., which will ensure the construction of the hospital.

Montreal Harbor Commissioners have adopted the plans for new wharf sheds. Four sheds are to be completed within six months. The plans call for overhead railway tracks.

Among the estimates passed by the Dominion Government were $20,000 for the Toronto armory; $18,000 for the Junction post office, and $8,000 for Toronto public buildings.

A Builders' Exchange has been formed in Winnipeg, members of which comprise contractors in any branch of the building trade and manufacturers of and dealers in any class of building material. The object of the exchange is to establish and maintain among its members a just and equitable system of dealing and a uniformity in commercial usuage, and the acquiring and dissemanating valuable information. The following are the officers: President, Ed. Cass; First Vice-President, G. W. Murray; Second Vice-President, Jos. Bourgeault; Treasurer, T. D. Robinson; Sergeant-at-Arms, Alex. Irwin; Directors, one year, E. S. Harrison, Angus Brown, W. A. Irish; two years, J. W. Morley, J. Douglas, Thos. Cotter; three years, R. Watson, V. Boche, Wm. Alsin.

REFRIGERATORS IN ENGLAND.

REFRIGERATORS of German and American manufacture seem to be the only ones sold in Manchester, Eng. A certain firm who handle the German make only, say they would prefer to sell a Canadian one, but for the fact that its construction in the matter of the ice department, is not as acceptable to their customers as that of the German made article. The American refrigerator is exactly constructed on the lines of the Canadian, but seems to be a more expensive adjunct to housekeeping than the latter.

There is no reason why the Canadian refrigerator cannot compete in price and finish with either of these mentioned, and the Canadian manufacturer, if he desires to obtain some share of the English market. The trade is in its infancy, many householders still retaining the effete ice chest, but it is growing, and will doubtless assume large proportions in due time.

"SHIELD BRAND" SHEATHING

TARRED or DRY.

For Lining—Houses, Barns and Stables. Extra strong, full weight, best quality. When ordering from your dealer DEMAND the "Shield Brand." It's a quick seller.

CURRENT MARKET QUOTATIONS.

April 2, 1904.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Paterson's Wire Edged Ready Roofing

has successfully stood the test of Canada's variable climate for over twenty years, and is the only popular substitute for shingles.

We are advertising the above Roofing extensively in the "Farmers' Magazines" and in all cases we ask prospective customers to order our goods from their local Hardware Merchants.

There will be a very large quantity of our Ready Roofing sold in the future, and you can't blame us if you don't get your share of that trade.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

WHY sell Old Style Cork Screws?

The People Want

WALKER'S SELF-PULLING

which draws the cork, cuts the wire, removes crown, seal and aluminum stopper. Does the whole thing. Each one tested and guaranteed. We manufacture over 50 different styles.

ERIE SPECIALTY COMPANY, Erie, Pa., U.S.A.

"THE REAL" SAFETY RAZOR IS A SELLER

OUR CONDITIONS ARE: Give to likely customers to try and if not absolutely satisfactory return it.

AGENTS FOR CANADA:

RICE LEWIS & SON, Limited, Toronto.
CAVERHILL, LEARMONT & CO., Montreal.

A New Kind of Razor

You'll be surprised at the way "The Real" Safety Razor shaves—*different* from any other razor.

It shaves clean and keen—smooth and easy.

It doesn't pull or break hairs.

"The Real" is the only perfect razor for *self-shaving*.

The *rigid handle* and the *anti-cut guard* make it better than the ordinary razor—*better control of the blade* on *face, strop* or *hone*—*quicker work* possible—*no cutting*.

It's better than other "safety razors" because it's a *razor*—not a hoe. Made of the *very finest* razor steel—*full concave*—2¼ in. blade.

GEO. W. KORN RAZOR MFG. CO., Little Valley, N.Y., U.S.A.

DO YOUR CUSTOMERS FENCE?

We don't mean fencing w'th foils and masks; but with post-hole diggers, wire stretchers, and pliers,—the kind of fencing that improves a man's property and makes it more valuable. He will appreciate it if you explain to him how his real estate will advance in price if neatly fenced, and incidentally, you can show him your line of labor-saving tools to help him do it right. We are showing you a few of ours.

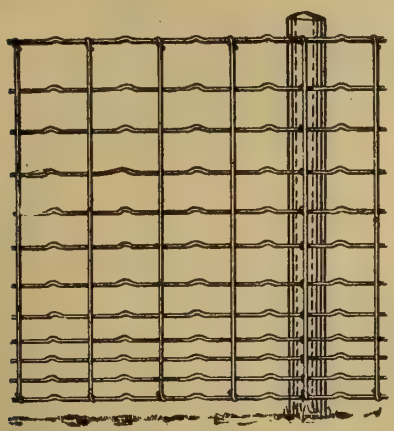
Electrically Welded WIRE FENCING



THE NEATEST, STRONGEST AND MOST DURABLE WIRE FENCE IN THE WORLD.

All made of No. 9 best galvanized Steel Wire, without any twists, locks, or other fasteners for cross wires, on which snow and ice can lodge, and thus hold moisture and cause rust.

And the cheapest fence in the world, according to weight of metal used.

All stay wires only twelve inches apart, and meshes must retain uniform shape, as wires cannot slip from proper position,

Large discounts allowed off List Prices.

The only real value of money lies in making use of it.

The money that lies there in your safe from day to day doesn't do you any good until you commence to use it.

Then its value to you depends on how you use it.

Now, if you would only invest some of it in advertising space in HARDWARE AND METAL and then use the space right, you'd have a valuable assistant, working to increase your trade with hardwaremen and to make yourself and your goods better known among them.

Some folks would sooner save (?) the money but they are "penny wise and pound foolish."

But you're not.

Are you?

KEMP MANUFACTURING CO., TORONTO, CANADA.

The Small Business as a School of Manhood

"FOR generations the small business, that is, the business as it was before the advent of the great corporation and the trust, was a school of character second in importance only to the church," says H. A. Stimson in a recent number of the Atlantic Monthly. It is rapidly being superseded, and the question is: What is to be the effect upon the business world?

Many years ago Mr. Stimson was confidential clerk in a typical city business house of the old style. Its heads were two young merchants, and he was given the opportunity of knowing both intimately and of observing the effect of their business upon their characters. The one was a gentleman by instinct and family connection,—courteous, kindly and unselfish. The other was self-made, aggressive, ambitious, selfish and intelligent enough to know the value of honesty as a policy, but without convictions. The daily routine of the business divided itself between these men by a kind of natural law. Everything requiring courtesy and the cultivation of the good will of customers fell to the one, while the planning of the business and all those important decisions which had to do with men whose good will was not particularly important to the firm, were passed by the other. The business itself, with its daily necessities and routine, constituted a school of character, giving play to the talents of both and holding their limitations in restraint. It would be interesting to look over the office letter books of those days and read in the correspondence the characteristic features of these two men. There would be found recorded, as accurately as in the record of a boy at school, their native traits and the history of their growth. Each knew as all the men of their day knew that the success of every business house depended upon the personal traits of the partners and their individual relations to the world of business quite as much as upon the wisdom of their plans.

This is understood in all forms of individual business, from the village store to the city establishment where in each instance the storekeeper is made keenly aware of the value of the good will of his customers. As a consequence he is kept under an impulse to be courteous, honest and considerate until these traits become largely characteristic. Whatever men may think about the business of the world it is inconceivable that the great business houses of the older type, which, passing from father to son, sometimes survived for centuries, could have continued under any other conditions. The great guilds of the Middle Ages were simply associations of men of this pattern. They organized for self-defence as individual merchants or tradesmen. And membership in these guilds quickly came to be dependent upon certain established types of character. Because of this the guilds held together, and became the permanent power which resulted in making the cities the instruments which enabled the early kings to shake off the power of the barons, and to break up the foundations of the feudal system in Europe. The Chinese guilds, the oldest existing organizations of business men, are also of this class.

The record of those early days still remains in our literature. Shakespeare's tale, the Merchant of Venice, turns upon the integrity, indisputable and dominant, of the merchants of that time; and the effect of the Chinese guilds upon the Chinese mercantile life is everywhere apparent. The other day the president of the Anglo-Chinese Bank at Shanghai, resigning, to return to England, after twenty-five years of service, in a public address testified that not a dollar had ever been lost by the bank through a Chinese merchant, and that the great fear he had for the changes now going on in the relations between the Orient and the Occident was lest the influx into China of foreign merchants, with a different standard of personal honesty, would do more to complicate and disturb the relations of China with the outside world than any other cause. For the Chinese have not been familiar with the lower standards of business integrity which prevail elsewhere.

Over against the guilds have arisen the modern corporation and the modern trust. They have so completely changed the essential conditions of business life as these bear upon the individual business man, that it is well to attempt to estimate the effect.

The pride of the merchant, or the manufacturer, in the business to which he was giving his life, and which bore his name, and which he hoped to make permanent in the community and to transmit to his children, has given place to another temper of mind in the passing of those smaller men into the great corporations. Names still linger from the early days: the Maydole hammer, the Buck chisel, the Disston saw, the Scott gun, the Morley hosiery, the Clay woollen, the Torrey strop, the Hassell brush, tell of a day when the skilful workman began to produce a better article than his neighbor, and soon discovering that his customers recognized its merits, found the way open to a career in which his heart found its sweetest pride, and his business life its most satisfactory reward. All that has vanished with the passing of the old conditions.

Under the new conditions a very few men are carrying the heavy strain, or may be considered as responding to the old challenge to be their very best, and to prove themselves masters in a splendid contest. It must be admitted that the prizes of the business world were never so magnificent for the capable few as they are to-day. The title "merchant prince" has taken on a new significance. But this applies only to the very few. Where there are in every great corporation or trust two or three or, perhaps, a few more, men at the head who carry the responsibility and find their powers taxed to the utmost by their daily duties, there are thousands of all grades of capacity, who now have no other feeling than that of the clerk, or the servant. Their intellectual activity is limited to doing the task that is set for them. They need to be keen, simply to understand directions and to meet the requirements of their department. Their moral responsibility is limited to obeying orders and earning their daily wage. The tax made upon them is only to do their day's work as it arrives, and at night leave their desk clear. They are part of a vast machine to whose perfection they are contributing; and in so doing are limiting their own powers, and bringing on the day when they can the more readily be dispensed with and forgotten. The best they can hope for is a pension. As life goes that is much, but it is not the best.

The great corporation is unquestionably the necessity of the hour. It will continue to take on constantly new forms of development. It is already

playing and will continue to play a tremendous part in the progress of civilization. But its limitations are none the less real. The evils that are inevitably connected with it must be clearly realized if they are to be offset. Among them all none is more serious than this radical one of the effect upon the character of many employees, who, under former conditions, would have been either managing their own business or ambitious for the opportunity of doing so. The life, in a multitude of homes where a salary takes the place of business earnings, is doubtless calmer and steadier, and also in many cases ampler, in that the income is larger. A certain stability is hoped for in a society where anxiety over business conditions is exchanged for the contentment of an assured stipend. And the steadying and quieting of the temper, no longer made irritable by the daily anxiety, is unquestionably a notable social advance. When, however, one looks within and asks what is to take the place of the old discipline, with its insistent demand for those traits of character which have made the merchant and the manufacturer the sturdy, thoughtful, self-respecting men they always have been, we are at a loss for an answer.

When thoughtful writers like Benjamin Kidd speak of "the freest possible play of forces within the community, and the widest possible opportunities for the development of every individual's faculties and personality" as the condition of progress, and of "the personal rivalry and competition of life" as being not only now, but having been from the beginning "the fundamental impulse behind all progress," there is cause for concern when men find themselves tempted to exploit agencies which effectually remove or destroy those conditions.

It is certain that a great change is going on, and one of that subtle and unperceived kind the effect of which is sure to be widely felt before it is understood, not to say corrected. How much it means of difficulty or even of disaster in the business world of the future it may be difficult to determine, but it will certainly have a profound effect in shaping the prospects even of the trust. It creates conditions under which it will be growingly difficult to produce men with the character and the intellectual stamina which are necessary to the management of the great corporations. Men who have simply grown up as clerks will never be truly competent to fill these positions. They will become more and more men of detail. And the system of inbreeding, that is, of limiting the filling of their more important posts to men who have risen through all the ranks of lower service,—which now is proclaimed by some of the great railways,—is a policy as truly suicidal as it is unintelligent. Great administrative positions require men who have been accustomed to that independence of action and breadth of view which only the responsibility of directing their own affairs can produce. It is a temper of mind and spirit as far as possible from that of the life-long clerk or employee. And no problem in the business world is more vital, or has farther reaching relations, than the question how such men are in the future to be produced.

ARE ENLARGING THEIR STORE.

The Purdom, Gillespie Hardware Co., who bought out the business of James Reid & Co., 118 Dundas street, London, Ont., about six months ago, are gradually increasing their trade and making improvements in their store. Messrs. Purdom and Gillespie are both young men, but have had valuable experience in the hardware business. Mr. Gillespie travelled for the Hobbs Hardware Co. for over five years and Mr. Purdom was with the same firm for a number of years. Hardware and Metal wishes them the full measure of success.

NEW MINING COMPANY.

The Imperial Coal & Coke Co., Limited, has just been organized in Montreal. The capital is $4,500,000. The officers of the company are :

President—W. Herbert Evans.
Vice-presidents—Jas. W. Pyke.
Secretary—Humes Hall.

This company have secured 60,160 acres of bituminous coal lands in East Kootenay, B. C. It is expected that by May systematic and extensive development will be entered upon. The chief object of the company is to produce coke, and the erection of coke ovens will be started as soon as possible. The company expect to find a market for their product in British Columbia, Northwest Territories, Manitoba and Montana, in the United States.

IRON INDUSTRY OF RUSSIA.

TO develop the iron industry of Russia the Government, early in the last century, prohibited the importation of any iron products into the Empire. Later, importations were allowed, but under duties amounting to 15 cents on each 36 pounds of metal wares and to $1.80 on each 36 pounds of sheet iron. These rates were levied in 1819. Since then, according to a U. S. consular report, the tariff has undergone many changes, until the present tariff came into effect.

In comparison with western European and United States tariffs Russia's customs duties are considered very high.

Notwithstanding the high duty the total output of cast iron in Russia is gradually decreasing. In 1899 it amounted to 2,632,190 tons; in 1902, to only 2,520,916 tons, a decrease of 145,-161 tons as compared with the output of 1901. The quantity of iron goods in the market in 1900 amounted to 3,282,154 tons and in 1902 to only 2,861,059 tons.

The consumption of hardware by the Russian people is not large. The principal consumer is the Government. The South Russian iron works and foundries, producing the larger part of metal goods, work nearly exclusively for the Government. The crisis, therefore, in the iron industry is due to the Government reducing its orders. Overproduction continued after the time when the heavy orders of the Government for railroad building were mostly carried out and when, for various causes—lack of funds, particularly—the demand in the home market gradually declined.

During the last decade, the Russian Government has spent about $500,000,-000, raised by foreign loans, on the iron industry, principally in building railroads. The $500,000,000 has been appropriated, hence the decline in the demand for iron wares. It is thought that the recent loan of $50,000,000 by France for railroad building will restore the iron industry to new life; however, such a dependence of the Russian iron industry upon foreign loans would appear to be of rather unstable character. There is an abundance of superior iron ore in Russia. Nowhere is labor cheaper. There is every chance to supply any home demand.

At Kalgan, within the lines of the new Russo-Chinese Railroad, it is proposed to erect iron works and foundries for manufacturing rails and for smelting iron ore, which is to be imported from Manchurian mines already under Russian control. Out of a total of 56 blast furnaces, 23 are in action.

CATALOGUES, BOOKLETS, ETC.

For the convenience of its readers HARDWARE AND METAL has opened its columns for the review of catalogues, booklets or other such publications issued by manufacturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. It is requested that when any of the trade write for any booklet mentioned in these columns that they credit HARDWARE AND METAL as the source of their information.

Curtis Pneumatic Appliances.

Curtis & Co. Mfg. Co., St. Louis, U. S. A., have issued a new catalogue illustrating and describing their latest designs of pneumatic appliances. This catalogue is a particularly effective one, the illustrations and general get up being exceedingly attractive. Among the appliances they call special attention to are their compressors, hoists, cranes, trolleys, etc. Their compressors are vertical single acting type, and they claim are operated with greater economy and efficiency than any other. Users of pneumatic appliances should not fail to see this catalogue.

—

Power Station Specialties.

The Geo. F. Blake Mfg. Co., 114-118 Liberty street, New York, have issued Bulletin B 62, illustrating and describing their standard types of auxiliary machinery for vacuum making and boiler feeding, which they have developed during the past few years. This company is prepared to make estimates, furnish full specifications and drawings and erect complete condensing apparatus of every description. The services of their engineering staff are offered for consultation to any power companies contemplating improvements.

—

Bignall & Keeler Mfg. Co.

We have received from the Bignall & Keeler Mfg. Co., builders of improved pipe threading and cutting-off machinery, Edwardsville, Ill., U. S. A., their latest catalogue, number 16, describing their machinery. The binding of this catalogue is good, and the illustrations are of a high order and are very clear. The catalogue illustrates and briefly describes in particular the machines and adjusting mechanism. Those using this class of machinery will find much to interest them in this catalogue.

—

Knowles Pumping Machinery.

Knowles' Steam Pump Works, 91 Liberty street, New York, have issued their general catalogue for 1904. In this catalogue the company have endeavored to give full particulars and illustrations of as many designs as possible of their pumping machinery. They will be pleased to furnish users of steam pumps with this catalogue, and also solicit correspondence from those who do not find within the catalogue designs of pumping machinery adapted to their special requirements.

—

Hot Air Buttons.

One of the prettiest buttons received by Hardware and Metal for some time has come to hand from the James Smart Mfg. Co., Brockville, Ont. On it is shown an excellent sectional view of the "Kelsey" warm air generator made by that firm. These buttons should be useful in helping any local agent for the "Kelsey" to make it a popular furnace. Another advertising device issued by this firm is a twelve page leaflet giving comprehensive information regarding their furnaces. Hardwaremen interested in the furnace trade should secure this literature to study the comparative value of the "Kelsey" furnace.

—

Brown & Sharpe Mfg. Co.

We are in receipt of the catalogue of the Brown & Sharpe Mfg. Co., Providence, R. I. The catalogue is separated into two parts, one in which machine tools are described and illustrated and the other being devoted to small tools. This catalogue will be mailed to applicants.

—

Hardware Specialties.

The Collins Mfg. Co., 34 Adelaide St., Toronto, have issued a well-illustrated catalogue of their hardware specialties. Among the lines included are fire proof stove pipe thimbles, air tight heaters, bakers, drums, charcoal stoves, sprayers, stainers, dampers, lanterns, trucks, etc. Specialties are such a good line with the hardware trade that all retailers should secure this catalogue.

THE SHERWIN-WILLIAMS

EMPRESS GOLD PAINT

FOR GILDING LIGHT FURNITURE, PICTURE FRAMES, GAS FIXTURES, ETC., AND FOR GENERAL DECORATIVE PURPOSES.

Empress Gold Paint as a fast selling specialty has everything to recommend it—good quality—dainty package—reasonable price.

As a gold paint it has many superior merits. It is a good representative of The Sherwin-Williams Full Line. It is made in liquid form—gives a brilliant lustre and is free from all disagreeable odors. We take the greatest care in making it. Its popularity proves that it fully and most satisfactorily fills every proper requirement of a good gold paint.

Every dealer will find it an easy selling and profit-paying addition to his stock of paint specialties.

Its attractive package and reliable quality appeal to every housewife. We are continuously and effectively advertising it—helping the dealer to sell it—a combination that produces profitable results wherever *Empress Gold Paint* is in stock.

MACHINERY

THE MACHINERY MARKET.

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, April 8, 1904.

THERE is a continued improvement in the condition of the Montreal machinery market and all the indications point to a greatly increased trade in the next few weeks. Miscellaneous buying has been active during the week, but no orders of exceptional magnitude have been put through. Some large buyers are reported to be on the market, but at present are holding off in the hope of lower tenders. Some large business in mill and shop supplies may therefore be expected soon. There does not seem to be any disposition among Canadian machinery houses to shade prices to any considerable extent. The market while not exceptionally strong is yet firm for all ordinary business and concessions for large orders are very slight.

As for some weeks past, interest has centred on the market for sawmill supplies and outfits and general lines of wood-working machinery. Business during the week in these lines shows no decrease.

From the sawmills and factories there has been a steady demand for engines and boilers of moderate horse-power. Feed water heaters and various other accessories to engines and boilers have been selling well, and the sale of power transmission appliances has been quite large.

The machine tool market is quiet. Apparently there are no large buyers on the market at present and miscellaneous sales have not been of much importance.

The electrical machinery market is showing a continued improvement.

Ontario.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, April 8, 1904.

THIS week machinery dealers have expressed general satisfaction with the way in which trade has been picking up during the last three or four weeks. The orders placed have not been large, but the total amount of business done has been very encouraging. Business during the past week has shown a slight improvement over that of the week before, both as to enquiries and active business transacted.

Dealers state that improvement has been noted in all lines of machinery, but perhaps the demand for saw mill outfits and general saw mill machinery has been more brisk than the demand in any other line. Boilers and engines have also made a good showing, but of course the demand for that line of equipment has been good during the whole year. Even at the time when the general situation was poorest, the demand for boilers and engines was fairly good.

Perhaps the demand for machine tools is smaller at the present time than the demand in any other line, but the market for this class of machinery is showing the general improvement.

The problem the machinery dealers have to contend with at the present time is the shipment of orders. Weather conditions have delayed the placing of orders so long that buyers are very anxious to have their machinery shipped at once. This dealers find some difficulty in doing since they cannot get cars. The blockade on the railways has so delayed freight shipments that the two railway companies have an unusual amount of work on hand. However, that condition of affairs will be merely a temporary one.

Lathes for High Speed Steel.

USERS of lathes must be interested in the many and various tests to which high-speed steel has been put during the past two or three years, and must, either from the accounts of these tests which have appeared from time to time in nearly all machinery periodicals or from actual experiment themselves, have become somewhat familiar with the advantages and disadvantages of this high-speed steel. It was pointed out in an article in Hardware and Metal of recent issue that one of the chief disadvantages of high speed steels was that they could not be used to the greatest advantage on the style of lathes now in use.

Dean, Smith & Grace, Limited, Keighley, Eng., recognized that there would be a market for lathes of special design for use with high-speed steels after the exhibition of the Taylor-White steel at the Paris Exposition in 1900. Since then that firm have devoted their attention especially to the designing, and building of a lathe which would give the best results with the use of high speed steel. As a result they have turned out such a lathe, and are now placing it on the market. The leading sizes that they are turning out are 17, 24 and 32-inch swing. The 17-inch swing has a hollow spindle, while the other two sizes have solid splindles.

Of course the chief requirements of a high-speed lathe over an ordinary lathe is additional power and strength in the lathe itself to withstand the extra strain. In the English lathe to provide for the delivery of additional power the shears and headstock have been widened, which allows the diameters of the cone pully and the main back gear to be increased. The result of this is quite marked, the 24-inch lathe carrying a cone having its largest step of 28 inches diameter and a back gear of the same diameter. The countershaft of the 17-inch lathe is fitted with two speeds, giving the following speeds to the lathe spindle: 13, 18, 24, 33, 43, 60, 79, 110, 145, 200, 261 and 360 revolutions per minute; while for the 24-inch lathe the spindle speeds are 15, 25.8, 41.5, 70, 120.7, 203.4, 332.2, and 560 revolutions per minute. The back gear motion for the 17-inch is 6 and for the 24-inch 8.

Owing to the high speed at which the cone pulley is operated, the centrifugal force is found to interfere with the lubrication of the cone bearings, and to provide for this, in the case of the solid spindle lathes, a hole is drilled from the rear end of the spindle past the bearings, from which oil holes lead the oil to the bearings, and a sight feed lubricator at the end of the spindle supplies oil. The lubricating of the tailstock centre, which has been found to give

trouble, is provided for by dulling the centre from the point, and mounting a grease cup on it.

The lathes are fitted with pump and oil pan, and the feed rod worm is so arranged as to be automatically dropped out of gear at the end of the cut. It is also interlocked with the screw-cutting feed nut so as to prevent the possibilitiy of both gears being thrown into action simultaneously.

The 32-inch lathe will remove a cut one inch deep under 1-8-inch feed and at 60 feet per minute peripheral speed, and has, under test with one tool cutting, removed 1,800 pounds of chips per hour. The 24-inch and the 17-inch lathe will remove cut of 1-2-inch deep under 1-8-inch feed and of 1-2-inch deep under 1-32-inch feed respectively, the peripheral speed being 60 feet per minute in both cases.

These speeds are considerably exceeded under lighter cuts, speeds of 80 to 100 feet being common when rough turning steel forgings, while in turning shafting speeds of 150 to 250 feet per minute are used. In cast iron the speeds range from 60 to 80 feet per minute.

Annual Meeting.

The annual meeting of the Western Implement Manufacturing Company was held recently in Winnipeg. The following directors were elected: R. Muir, H. Sandison, F. J. C. Cox, Robt. Barclay, C. W. Sharp, F. W. Drewry, J. McDiarmind. At a meeting of the directors after the annual meeting the following officers were chosen:

President—R. Muir.
Vice-president—H. Sandison.
Secretary-treasurer—F. J. C. Cox.
Managing Director—Robt. Barclay.

At the meeting it was announced that the foundations for the new factory at Fort Rouge were completed, and that the superstructure would be commenced at once.

E. J. Desmarais, representing the Montreal Valve Co., demonstrated a new patented shut-off valve to Chief Cheyne of the Windsor fire department Friday, which enables the shutting off of a line of hose at a hydrant without the closing of the hydrant valves.—Windsor Standard.

The Aylmer Iron Works are now working overtime in the endeavor to catch up with their orders for their popular specialties, which accumulated rapidly through a shutdown due to the difficulty in getting material.—Aylmer Sun.

MACHINERY AND ELECTRICAL NOTES.

THE Montreal Car Equipment Co., Limited, Toronto, have been incorporated with a capital of $40,000, to deal in railway supplies, appliances and equipment of all kinds. The directors are: F. C. Annesley, A. J. Mitchell, R. P. Ormsby, L. W. Mitchell, all of Toronto; and J. Montgomery, Simcoe, Ont.

It is proposed to consolidate the Leamington & St. Clair Railway Co., the Sarnia, Chatham & Erie Railway Co., and the Canada Southern Railway Co.

A quantity of mining machinery has been purchased in Vancouver for the extension of the stamp mill plant at the Great Northern mines at Camborne, B. C.

The $5,000,000 electrical smelter of the Amalgamated Copper Trust at Anaconda, Montana, U. S. A., has been completed and will be put to a practical test soon.

The Kent Electric Co., Limited, Fredericton, N. B., have been incorporated with a capital of $20,000. The directors are: F. A. O'Leary, Wm. O'Leary, both of Montreal; W. H. Hogan, H. H. James, both of Richibucto, N. B.

The Montreal Locomotive and Machine Co.'s works have now formally passed under the control of the American Locomotive Co. The following board of directors will assume control: S. R. Callaway, New York, chairman; K. W. Blackwell, Montreal, president; J. R. Wilson, Montreal, vice-president; M. G. Haney and R. Miller, both of Montreal.

The Toronto City Engineer reporting to the Works Committee with reference to the proposal of Mr. Corson to apply the Carrol system for preventing hydrants from freezing, says the application of this system to street hydrants would be a very simple matter. The cost of altering each hydrant (including the royalty of $5 for each hydrant altered), would be from $11.50 to $13.50 so that the total cost of applying this system to 3,000 hydrants would be from $34,500 to $40,500.

The Canadian Pacific Railway have an order with the Kingston Locomotive Works for 11 heavy freight type locomotives for use in the Canadian Northwest, and one with the Canadian branch of the American Locomotive Works at Longue Point, Que., for 10 locomotives of a similar class. The placing of the orders by the C. P. R. in Canada should be a great encouragement to the Canadian locomotive manufacturing industries. Heretofore the C. P. R. have obtained nearly all their locomotives from the United States or from Scotland, and therefore their action at the present time speaks well for the future advancement of the locomotive building industry in Canada.

The Toronto fire department estimate the following among their needs for 1904: Gas lamps and electric lights for street lighting $123,074; 3,000 feet 2 1-2 inch fire hose, $2,700; one hook and ladder truck, equipped with Seagrave trussed ladders, for Lombard street fire hall, $2,000; one two-horse hose wagon for Brock avenue fire hall, $450; one combination hose wagon and chemical engine, $800; 1,000 feet 1-inch chemical engine hose, $450; 10 fire alarm signal boxes, $1,250; two dozen tarpaulins, $288; six Babcock fire extinguishers, $150; wire, brackets, insulators, etc., for fire alarm telegraph, $300; clothing, bedding, etc., for eight men, $450; ladders and babcocks, $200; hose wagon, $450; fire alarm gong, $125.

When George Westinghouse, as a young inventor, was trying to interest capitalists in his automatic brake, the device which now plays so important a part in the operation of railroad trains, he wrote a letter to Commodore Cornelius Vanderbilt, president of the New York Central Railroad Company, carefully explaining the details of the invention. Very promptly his letter came back to him, indorsed in big, scrawling letters, in the hand of Commodore Vanderbilt: "I have no time to waste on fools." Afterwards, when the Pennsylvania Railroad had taken up the automatic brake and it was proving very successful, Commodore Vanderbilt sent young Mr. Westinghouse a request to call on him. The inventor returned the letter, indorsed on the bottom as follows: "I have no time to waste on fools."—Success.

Testing Lubricating Oils.

IN reply to an enquirer an exchange gives the following directions for testing lubricating oils:

"It is not very easy to give any simple directions for the testing of lubricating oils. The whole question of lubricants is complicated in the extreme, and the circumstances in which they are used are so various that simplicity is out of the question. There are machines made for testing the actual behaviour of oils un-

der given conditions of temperature, pressure, speed of revolution, nature of bearing, &c. If subscriber has decided upon the specific gravity, viscosity, and flash-point which he wants in the oil which he is about to use, then he can test for these qualities as follows :

"Specific Gravity—Raise the temperature of the oil to 60 degrees Fahr., or 15 degrees C., and use the ordinary weighted bulb which stands in water and shows 1,000.

"Viscosity—Fill a glass tube of small diameter with a given quantity of oil, and note how many seconds it takes to drop out. Then, after cleaning the tube, fill it with refined English rape oil, and take a note of the corresponding time. The viscosity of rape oil being taken as 100, the proportion between the two can thus be calculated. Viscosity, however, varies in lubricating value; it depends upon cohesion and adhesion—cohesion between the particles of the oil itself, and adhesion to any other body with which it comes in contact.

"Flash-point—To test for this, take a small porcelain or copper vessel capable of holding a little more than 2 oz. of the fluid, nearly fill it with oil, and fix it over a bunsen burner; place a thermometer in the oil in such a position that the bulb does not touch the side or bottom of the vessel, but is covered with the oil, and at the same time can be read easily. Watch the rise of temperature, and for every two or three degrees apply a light near the surface of the oil. When the flash-point is reached a blue flame will shoot over the surface of the oil and go out again.

"Fire-test.—To arrive at the fire-test the heating process must be continued until the blue flame does not flash any longer, but burns steadily.

"Both specific gravity and viscosity may be obtained in various ways. If they are obtained by the use of fatty oils such as lardine, thickened rape, castor oil, &c., then it may be needful to test for free fatty acids, for if these are present in any quantity the oil is likely to damage the machinery, especially in the case of cylinder-oils.

"Test for Acid.—Make a solution of phenol-phthalein, say as much of the chemical as will lie heaped on a sixpence, dissolve in 6 oz. of methylated spirit. Add a few drops of caustic soda until the liquor is of a red tint. Put some of the oil into a bottle and add a small quantity of the testing-liquor, and shake it well. If acid is present the red color will disappear. Litmus-paper is of no use as a test for acid in oil."

POSSIBILITIES OF SUPERHEATED STEAM.

IN order to attain the highest commercial efficiency, of a steam plant, including both the engine and the boiler, it is necessary that superheated steam be used, this statement having reference both to the ordinary reciprocating engine and to the steam turbine. For the reason that at the present time the use of the steam turbine is very far from being general, it being for the greater part utilized for the generation of motive power for steamships, for which it is peculiarly adapted, nothing will be said of the use of superheated steam in the turbine; but the article will be restricted to its use in the reciprocating engine.

It is only during the last six or seven years that the use of superheated steam has been developed to any extent, although its use dates back fully 75 years ago. During these last few years, however, its use has been widely adopted in continental Europe. Indeed all new plants of any considerable size which have been established there during the last three or four years, are using superheated steam.

In this development of the steam engine American and Canadian designers are somewhat behind those of Continental Europe. However they are now beginning to realize the opportunity for improvements in the steam engine from an economical standpoint by the employment of superheated steam in the cylinder instead of saturated steam, and consequently more attention is being paid to it.

Although superheated steam had been experimented with as far back as 75 years ago, it was not until 1850 that it was used to any great extent for commercial purposes. During the time betweeen 1850 and 1870 there was considerable interest taken in the use of superheated steam, principally as it was applied to the marine engine. What is known as the Parsons and Pilgrim's superheater was specially designed for marine practice. It consists of a number of semi-circular pipes placed in the furnaces, by which means it is stated, that a saving of one-third in fuel was realized.

The English Board of Trade, however, objected to the use of superheated steam on the ground that at the temperature to which the steam was superheated it was liable to break up into its elements oxygen and hydrogen, in which case the cylinder pipes and boiler would be liable to burst under the increased pressure occasioned by the disunion of the two gases, oxygen and hydrogen, and the consequent increase in volume. This objection was removed, however, by Farady, the world-renowned physicist, who fully investigated the matter.

The two great difficulties experienced by engineers at that time with superheated steam was that the material of the superheated did not withstand the heat for a very long time, and with respect to the lubrication. At that time none of our mineral oils of the present day were known and they used as lubricants, animal oils and fats.

In spite of this disadvantage a great many superheaters were installed on board ships and not a few on land. However in the seventies the compound steam engine was introduced, in which steam at a high pressure was used. The economy of the compound engine using high pressure steam was found to be considerably greater than that of the single expansion engine using steam at a lower pressure. For this reason and because of the increased difficulty experienced in the lubrication of a number of cylinders instead of one, designers and builders of engines began to pay especial attention to the development of the steam engine along the line of high pressure and the compound principal. Consequently superheated steam gradually fell into disuse, and was not again used commercially until the last few years of the past century.

During that time many advances were made along the lines mentioned and also in the improvement of mechanical details, such as the valve gear and governor. Now, however, improvements in the economy of the steam engine along those lines have reached their limit, for the time at least; indeed this was the case some seven or eight years ago. This statement is acknowledged by all competent engineers. Steam engines are now made with one cylinder, two cylinders, three cylinders and even four, but the slight increase in economy which would be the result of the addition of another cylinder to these does not warrant the cost of such an addition—at least with the high steam pressure then available. Boilers are now built to stand as steam pressure of about 250 pounds to the square inch, and with that

the high pressure limit is reached, for the reason that it would be unprofitable to design a boiler for a higher pressure since the increased cost of such a boiler would more than nullify the increase in economy of the engine by the use of the steam at the higher pressure.

Notwithstanding the fact that great advances have been made in the increasing of the economy of the steam engine, it is still regretably low. Therefore, having reached what at the present time appears to be the limit in one direction, engineers, not being satisfied with the economy of the steam engine as arrived at by investigation in that direction, have again turned their attention to the use of superheated steam. The chief objection to its use, namely the difficulty of lubricating the cylinder, can now be removed by the use of heavy lubricating cylinder oils which have been introduced since 1870.

During the period when nearly all steam engine disigners were devoting all their attention to multiple expansion engines and the use of high pressure steam, there were, a few stuck to the development of the use of superheated steam, and it is due to these, chiefly to William Schmidt and Schwoerer, and Herisig, all Germans, that the use of superheated steam is practical at the present time. It was not more than eight years ago that considerable interest was aroused among those interested in the subject by the publication of the results of a series of tests of an engine and boiler built specially for the use of superheated steam by Wm. Schmidt and Professor Schroeter, of Munich, Germany. The engine was a small one, being only a 75 horse-power; it was a tandem compound, both cylinders being single acting; but throughout it was of original design. The results of the tests showed that, when generating 75 horse-power with the use of superheated steam, the consumption of steam per indicated horse-power was only 10.4 pounds, and per brake horse-power only 12.3 pounds. That economy might be indicated in another way, i.e.: the amount of coal used per indicated horse-power was only about 1.3 pounds, which is a somewhat surprising result for an engine of that size. As a result of this test the Schmidt engine and boiler became very popular, and at the present time there are not a few engines running in Germany and the nearby countries.

The Babcock & Wilcox Co. are manufacturing superheaters and their method of arrangement with respect to the boiler is to install a number of solid drawn steel tubes, bent into a U form, and expanded at each end into wrought steel boxes or manifolds, in the boiler setting proper, through which the saturated steam from the top of the boiler is drawn on its way to the engine. In this coil the steam is superheated by the passage of the hot gases on their way to the chimney. When steam is being raised from a cold boiler, an arrangement is provided for flooding the superheater. This consists of a connection with the water space of the boiler drum and two cocks. By opening the larger of these, water is admitted to the superheater, and fills it to the boiler level. Any steam formed while the superheater is flooded is returned to the boiler drum. When steam is raised to working pressure, and before opening out the boiler on to the steam range, the large cock is closed and the small one opened, and the water flooding the superheater is then drained away, a sight glass being provided to show when the draining is complete. The superheater is placed in a position that ensures the steam receiving from 100 degrees to 150 degrees F. of superheat. Freedom from expansion is provided for by the tubes being free at one end, and by the manifolds not being rigidly connected with the other. Should it be desired to use saturated steam, the superheater may be used as part of the boiler heating surface, by flooding it with boiler water. The Babcock & Wilcox Company claim that there are over 3,000 of these superheaters at present in use.

There is, however, another way of superheating the steam which has been used in many installations in Europe. This arrangement is to install an independent superheater with separate furnace, and such installations have shown a gain in economy, although not so great as in the other method.

There are in general two kinds of superheaters made, namely those made of wrought iron or steel and those of cast iron. The Hering is a good example of the wrought iron type. This consists of a series of wrough iron pipes of small diameter bent into coils. Owing to the high temperature to which the superheater is subjected it is impossible to have the ordinary flange joints or couplings. The Babcock & Wilcox Co. also manufacture a separate superheater of this type. The cast iron

HONORED THEIR HOCKEY TEAM.

ON Thursday evening last week about thirty-five employes and friends of the James Morrison Co., Limited, gathered in McConkey's restaurant at a banquet given the hockey team of that firm by Mr. James Morrison, the president of the company and of the club.

The chairman of the evening was the vice-president, C. E. Morrison, who kept things going in merry style.

The toasts of the evening were "The King," responded to by J. Woodburn; "The Hockey Team," by F. G. Morrison and James Fiddes; "The Ladies," by S. T. Hadley and J. T. Peacock.

From eight o'clock onward speeches, stories, songs and refreshments so beguiled away the hours that when at 2 a.m. "God Save the King" was sung the "boys" were loath indeed to part company.

The record of the Morrison team in winning the championship of the "Queen City" league and with it the cup shown herewith, is an excellent one for their first season, but the members of the team think the honors bestowed on them by the firm and their fellow-employes have more than recouped them for their hard work during the season.

HARD WITNESS TO MANAGE.

THE lawyer for the defendant was trying to cross-examine a Swede who had been subpoenaed by the other side as a witness in an accident case?

"Now, Anderson, what do you do?" asked the lawyer.

"Sank you, but Aw am not vera well."

"I didn't ask you how is your health, but what do you do?"

"Puddy hard vewrk; it ess puddy hard vewrk."

"Yes, but do you drive a team or do you work on a railroad, or do you handle a machine or work in a factory?"

"Oh, yas; Aw vewrk in fact'ry."

"Very good. What kind of a factory?"

"It ess wery big fact'ry."

"Your honor," said the lawyer, addressing the court, "if this keeps on I think we'll have to have an interpreter." Then he returned to the witness.

"Look here, Anderson, what do you do in that factory—what do you make?" he asked.

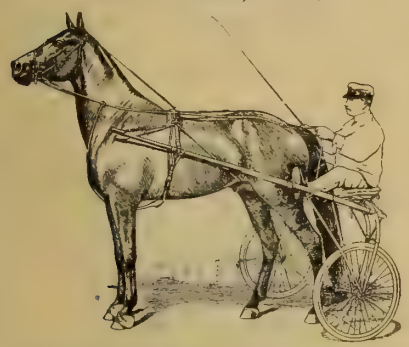
"Oh, yas, I un'erstan'—you want to know vat I make in fact'ry, eh?"

"Exactly. Now tell us what you make."

"Von dollar an' a half a day."

And the interpreter was called in to earn his salt.—New York Times.

DAN PATCH, 1.56¼



World's Champion Harness Horse.

COLDWATER, ONT.
HARDWARE & METAL,
TORONTO.

Dear Sirs:—Your favor of the 29th January to hand re International Stock Food. I have only had their agency for about three months, and must say I have had great results and the best of satisfaction from International Stock Food.

International Stock Food not only pleases the merchant who sells it, but also makes a customer for me at every place where I put the goods in. International people know how to advertise so well that I have scarcely any effort in selling their food, as the farmer understands exactly what he wants from the way the firm advertises direct to the farmer. I have never handled a line of goods that gave me better results. Yours truly,

(Sgd.) H. M. BORLAND.

INTERNATIONAL STOCK FOOD

INTERNATIONAL STOCK FOOD will prove the best specialty line you ever handled, being a ready seller and netting you a large per cent. of profit. Over 40,000 dealers are to-day handling these goods, among them being many hardware men. We are anxious to increase the number of our agents, and would like to have you drop us a card so that we can furnish you with full particulars of our Special Dan Patch Lithograph Offer.

THE RUSSIAN IRON INDUSTRY.

RUSSIA has sought to develop an iron industry by paternalism. A practically prohibitive tariff has been backed by large expenditure by the Government on the iron industry, mostly in railway construction. Over $500,000,000, raised by foreign loans, has been spent in this way, according to a United States consular report published elsewhere in this issue.

Now the industry is in a precarious condition. The Government has curtailed its buying and as the use of hardware and metals by the Russian people is small the production has necessarily been steadily curtailed until now out of a total of 56 blast furnaces only 23 are in operation. The fact that the country looks to a recent loan of $50,000,000 from France for an improvement in the situation serves but to emphasize the instability of the industry.

It has been frequently stated that the quality of the iron and steel of Russian production is decidedly inferior, that this has been manifested both on the railways and in the battleships equipped in Russia. Whether this criticism be just or not it is quite evident that the Russian Government's attempt to develop an iron industry by extreme paternalism is far from being a success.

FRANCE AND CANADA.

RECIPROCITY with France is said to be once more receiving the attention of the United States Government. The proposed treaty of a few years ago lapsed in 1903 because of the expiration of the time for its ratification and now, because the United States does not take advantage of the favored nation privilege, its products are taxed to the maximum in France. In consequence, business organizations there are urging the Government to renew negotiations which will remove the disadvantage.

A reference to such a question naturally suggests a consideration of Canada's commercial relations with France. It will be remembered that in 1893 a commercial agreement was arrived at between France and Great Britain, on behalf of Canada. Under the provisions of this treaty which went into force on October 14, 1895, certain French products are admitted into Canada under a reduced tariff and certain goods of Canadian origin are admitted into France subject only to the minimum duty imposed in that country.

Since the treaty went into force trade in these articles has shown a steady advance, which is extremely gratifying to both parties. Since 1896 Canadian importations of these French products have more than doubled, mounting in value from $284,414 in 1896 to $587,431 in 1902, and it is understood that the return trade has been equally satisfactory.

The treaty of 1893 has been justified and we believe that any further steps to improve trade relations between Canada and France will be both acceptable and profitable. While Canadians cherish the British connection and look with hope towards a closer commercial union with the Motherland, it must not be forgotten that a large proportion of our population are of French origin and that they would view with appreciation any favors that might be offered to France. Moreover, Anglo-French relations have been greatly strengthened of late by the conclusion of an arbitration treaty between Britain and France. This treaty was the direct outcome of the work of boards of trade in both countries, and illustrates the power which business men can wield even in international affairs, when they so decide. Its adoption has paved the way for many friendly advances in the future. Among them, it is to be hoped, will be the negotiation of a commercial treaty of even wider scope than the present.

THE EXPANSION OF THE WEST.

DURING the month of March the Inspectors' Department of the Winnipeg post office, which has in charge the opening up of new post offices in Manitoba and the Territories, made a record. Twenty-six new offices were established, being one in excess of the number opened in September, 1884, the month which has hitherto held the record.

The rapid extension of the postal service opens up new areas of influence to the merchant, the jobber, and the manufacturer. The tradesmen who occupy these new fields are for the most part strangers to the trade. They have no established connections with any house. They are as the unbroken prairie, waiting to be tilled. There is in them the same rich promise as is in the soil. The wholesaler or manufacturer who cultivates their trade is sure to have an abundant return as the years pass.

The speediest and most potent means of impressing one's name and business upon these alert tradesmen of the West is through advertising in their trade newspaper. To establish a good impression is the first requisite in going after a new account. We are all prone to give our money more willingly for advertised goods than for non-advertised goods, to houses that advertise rather than to these that come to us out of the darkness.

THE FORWARD MOVEMENT.

THE average board of trade in a Canadian town is practically a dead letter to-day. Possibly the board meets once a year. A handful of members put in an appearance. Two or three officers are elected or, more frequently, re-elected. A high sounding and elaborate resolution in favor of the preferential policy of the Hon. Joseph Chamberlain is passed and forwarded to that statesman. Then the meeting adjourns and the business of the board for the year is accomplished.

Fortunately for Canadian commercial interests, all our boards of trade are not of this standard, nor does Canadian prosperity depend at all largely on the activity of the boards of trade. But, while this may be the case, it does not follow that such organizations cannot be of great value both to the communities in which they are located and to the country at large. The past efforts and accomplishments of the boards give ample proof of this. When boards of trade were first organized in Canadian towns and cities they did a splendid work, which unfortunately has not been paralleled to this day.

It is a pleasant sign of the times to note the rejuvenation of the Halifax board of trade and the inauguration of a "Forward Movement" in its policy. This movement is to be marked by a three-fold advance. First, a large and enthusiastic membership is to be secured. Second, the membership is to pledge its support and lend its best business capacity to the carrying out of all future projects undertaken by the board. Thirdly, a young and active secretary is to be secured, who will take charge of the executive work. The Halifax board of trade are in earnest. They have formulated a plan of compaign and, because the plan is practical, it will in all probability be successful.

It is our opinion that the present time is an admirable one for the rejuvenation of one and all of the Canadian boards of trade. Capital has organized and is organizing into its employers' associations. Labor is strengthening its hands in the unions. Manufacturers have their Canadian association,—but there is still a necessity for the better organization and consolidation of the commercial interests of every community. Too frequently these interests are badly served or neglected by the municipal councils. An active board of trade would not only remedy this defect but would create a renewed activity in municipal affairs. Its attention could be directed towards the reform of many grievances, the establishment of beneficial institutions, the attraction of tourist trade, the improvement of means of communication, and the general advancement of the interests of the town or city.

The organization of the board should be such as to expedite the transaction of business. Too frequently valuable time is wasted in argument. This can be saved by a system of representative committees, whose duty it is to secure all information and formulate policies, to be subsequently approved by the whole board. In this way an admirable work can be carried on quietly and effectively, without undue ostentation and noise. If a secretary can devote his whole time to the work of the board, so much the better, but even this is not necessary. Reliable information, a definite policy and sound backing will usually carry the day when any work is to be accomplished.

THE POPULARITY OF THE BICYCLE

A REASONABLE explanation of the decadence of the bicycle has been given. It is simply that as inventions lagged, for several seasons the only new feature being the color of the paint, public interest also waned. Manufacturers had come to the conclusion that the bicycle had reached perfection and continued turning out wheels of a standard design. Presently the public lost interest, the novelty of the wheel having worn off, and the vast majority were content to use their old wheels. In short lost favor in society which had been wont to buy a new one each time the fashions changed and became the servant of those who saw in it a contrivance of great usefulness and economy.

The bicycle is still and probably always will be of great practical value. The invention of the cushion frame and coaster brake have undoubtedly added to its popularity for those who seek pleasure and comfort in travelling.

It is reasonable to look for a substantial increase in the popularity of the bicycle throughout Canada, both for pleasure and for practical purposes. What this will mean to the hardwareman will depend on the manner in which he seeks to encourage business in this line.

BUILDING OPERATIONS SLOW.

REPORTS from practically all sections of the Dominion unite in the opinion that the backward Spring has had a material influence in retarding building operations.

In nearly all the large cities an active year in construction work is anticipated. But the exceptional severity of Winter has prevented the commencement of work during its duration. Added to this the Spring has opened up so slowly that work which should have been well under way is now only being prepared.

In the country and in many of the towns as well the bad roads of the early Spring time have come weeks later than usual, with the result that even yet those connected with the building trades have little data to work on in laying out their work for the season.

A factor which must be taken into account and which may possibly be even more serious in its consequences than the backward Spring is the probability of labor difficulties. It is generally understood in Toronto that if the present season proves to be a busy one the plumbers and possibly other trade unions will declare a strike for higher wages, whereas if the season is an ordinary one the unionists will accept the present scale without question.

Yet, notwithstanding the present backwardness and the probabilities of labor difficulties those in the best position to know anticipate that the aggregate of building operations in the Dominion will be considerably in excess of the figures of previous years.

PRESIDENT DRUMMOND IN ENGLAND.

GEO. E. DRUMMOND, president of the Montreal Board of Trade and of the Canadian Manufacturers' Association, the Canada Iron Furnace Co., Midland, Drummond, McCall & Co., Montreal, and other Canadian iron interests, accompanied by A. J. Hodgson and Ald. Ames, of Montreal, represented Canadian commercial interests at the banquets of the London and the Liverpool Chambers of Commerce.

The London representative of Hardware and Metal found Mr. Drummond at the Grand Hotel, London, soon after his arrival. "We had a splendid passage," said he, "from New York to Liverpool, making the trip in just five days and twenty hours. Messrs. Hodgson, Ames and I were in time for the banquet of the Liverpool Chamber of Commerce, at which I represented the Montreal board and replied to the Canadian toast. Since then we have been almost deluged with invitations to banquets tendered by the various chambers in Sheffield, Leeds and a host of other places, but as I have come over for my health, I expect to leave for the continent in a few days' time, and will be unable to avail myself of these opportunities of meeting business men of this country. Messrs. Ames and Hodgson, however, will remain in England for some time and will ably represent the Canadian boards of trade at these gatherings."

Mr. Drummond finds quite a different tone prevailing in England, in trade and manufacturing circles, and notices a much more intelligent interest in Canada than formerly. He attributes this in no small measure to the visit of the chambers of commerce to Canada last Summer. The introduction of party politics into the fiscal problem and other affairs of great international importance he notices, however, with considerable regret.

MEETING OF WHOLESALE HARDWARE ASSOCIATION.

THE Canadian Wholesale Hardware Association met on Tuesday at the Windsor Hotel, Montreal. President F. O. Lewis presided and there was a large attendance, all the Montreal houses belonging to the association being represented and there was a large attendance from Ontario and Western points. Among those from outside Montreal who attended the meeting were John Bowman, London; Peleg Howland, Toronto; James Hardy, of Jenkins & Hardy, W. Vallance, T. B. Lee, Toronto; C. A. Whitman, London.

The association met in conference with the members of the Wire Nail Association who were holding a meeting on the same day. At the close of the meeting it was announced to a Hardware and Metal representative that no changes in price had been made. It is said that an increase in the price of nails was mooted but that it was decided to maintain present prices. The barb wire situation remains in statu quo.

The members of the association are looking forward to a prosperous season. Several members complained of the general tie-up of business during the Winter but the feeling is that a continued improvement may now be expected.

Toot Your Little Whistle.

If you toot your little whistle
And then lay aside your horn,
There is not a soul will ever know
That such a man was born.
The man who owns his acres
Is the man who plows all day.
And the man who keeps a-humping
Is the man who makes it pay.
The man who advertises
With a short and sudden jerk
Is the man who blames the printer
Because it didn't work.
The man who gets the business
Uses brainy printers' ink.
Not a cutter and a splutter.
But an ad. that makes you think.
And who plans his advertisements
As he plans his well bought stock,
Has the future of his business
Just as solid as a rock.

EARLY CLOSING AT PRESTON.

THE agitation in favor of early closing which attracted so much attention a few years ago has by no means spent itself. There is not as much heard about the matter now, yet it is safe to say that all over Canada merchants have learned that the small extra gain by keeping open till late hours does not compensate for the loss of pleasure and comfort entailed, with the result that the early closing of shops is generally observed throughout the Dominion.

In some cases an agreement among the merchants of a town is sufficient to secure early closing, but in some towns the legal method has been found advantageous.

The wording of a by-law to this end is of considerable importance as the shops included must be specified distinctly, beyond the possibility of a doubt. The following by-law passed by the Preston, Ont., council is a type of the necessary enactment :

1. That from and after the time this by-law takes effect, all shops within the Municipality of the Town of Preston belonging to the classes following, that is to say:—Shops for the sale of Hardware, Shops for the sale of Stoves and Tinware, Shops for the sale of Jewellery, Shops for the sale of Dry Goods and Gents' Furnishings, Shops for the sale of Carpets and House Furnishings, Shops for the sale of Books, Stationery and Fancy Goods, Shops for the sale of Boots and Shoes, Shops for the sale of Groceries and shops for the sale of Merchant Tailors' Goods and Shops for the sale of Drugs, Medicines and Fancy Goods, etc., shall be closed during the periods of the year and at the time and hours following, that is to say:—From the First of January to the Thirtieth day of November (both days inclusive) in each year between seven of the clock in the afternoon of each day of the week except Wednesdays and Saturdays and any evening next preceding any civic or public holiday and five of the clock in the morning of the following day.

2. That any person guilty of an infraction of any of the provisons of this by-law, shall upon conviction before the Mayor or any one or more Justices of the Peace for the County of Waterloo on the oath or affirmation of any creditable or credible witness forfeit and pay for such offence, being a first offence, a penalty of One Dollar exclusive of costs and a penalty of Five Dollars for any subsequent offence exclusive of costs and it shall and may be lawful for the Mayor or convicting Justice or Justices of the Peace to issue a warrant under his hand and seal to levy the penalty and costs or costs only by distress and sale of the offender's goods and chattels and in case of no sufficient distress to satisfy the said penalty it shall and may be lawful for the Mayor or other convicting Justice or Justices of the Peace to commit the offender to the Common Jail of the County of Waterloo, with or without hard labor, for the period of ten days for the first offence and twenty days for every subsequent offence unless such penalty and costs, including the costs of the committal to the Common Jail, be sooner paid.

PERSONAL MENTION.

Mr. Allen C. Jenking, manufacturers' agent, Montreal, is in New York this week.

Mr. Walter Dorken returned to Montreal this week from a business trip to Winnipeg.

Mr. Geo. Pearsall, hardware dealer, Yonge street, Toronto, is confined to his house with illness.

Mr. Robert Fair, Queen street east, Toronto, is unable to be at the office, owing to illness.

Mr. McKelvey, of McKelvey & Birch, hardware merchants, Kingston, Ont., was in Toronto on business on Wednesday.

Mr. Frank H. Scott, manufacturers' agent, Montreal, has returned to that city after an extended business trip in Ontario.

W. R. Dick, a prominent lumber merchant of Winnipeg, and a partner of the lumbering firm called Dick, Banning & Co., is dead.

Mr. Walter Grose returned to Montreal last week from a trip to Winnipeg. He reports a wonderful growth in the metropolis of the Northwest since he was there a year ago. Several new warehouses have been built and others are building. Business prospects in Winnipeg are very bright.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Hardware.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, April 8, 1904.

REDUCED freight rates went into effect on April 1st and the result has been a big increase in shipments this week. Many orders were for shipment as soon as the reduced rates went into effect. The Quebec Southern is running again and freight for points on the south shore can now be delivered without any trouble. Shipments this week have been very large and the orders received are quite satisfactory. Business prospects now are brighter than for some weeks past, and there is a much better feeling among the trade. Collections are improving, although they are not all that might be desired. The end of the month should see a decided improvement in this respect. Prices throughout remain steady. Wholesalers are getting supplies freely from the American manufacturers in most lines, but one or two large concerns are reported to be much behind with their orders.

Sap Spouts—Selling in large quantities in Eastern Townships and throughout the province. The price is $6.75 per 1,000. Cook's sugar bits are selling at 50 per cent. off list.

Churns—There is a steady demand and prices are firm. The discounts are 40 and 15 per cent. f.o.b. Montreal and 30 and 30 per cent. f.o.b. factory.

Poultry Netting—Good shipments are being made this week and some orders are still coming in. Discounts for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-gauge, the discounts are 55 and 5 per cent.

Galvanized Poultry Netting Staples—In steady request at former prices which were as follows: Sizes 5-8, 3-4, 1, 1 1-8, 10-lb boxes, $12.50 list; 25 and 50-lb boxes, $12.25 list; 100-lb boxes, $12 list. Less 57 1-2 per cent.

Bed Staples—The discount on the Montreal Rolling Mills Company's and the B. Greening Wire Company's lists is 57 1-2 per cent. The discounts on the Dominion Wire Company's list are 25 and 2 1-2 per cent.

Blind Staples—The discount is 40 per cent.

Boxwood Rules—Discounts range from 52 1-2 to 50 per cent. off list.

Shot Guns—There is no agreed price at present on American single-barrel guns and these can now be bought at a very low figure.

Heavy Screw Hooks and Hinges—The demand shows considerable improvement. Size 12 inches and upward are selling at $3.25 per 100 lbs; the price of 6, 8 and 10-inch sizes is $4.25.

Lawn Mowers—Trade this Spring has been good in lawn mowers and promises to be better. Prices quoted are well maintained. We again quote the following prices: With 8-inch wheel, sizes 12, 14 and 16 inch, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18 $4.75; 20, $5.25 each.

Garden Hose—Trade continues satisfactory at the following unchanged discounts: Trade, 75 per cent.; Western, 65 and 10 per cent.; White, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; cotton, 60 per cent.

Harvest Tools—The discount is 60 per cent.

Spring Hinges—There is a fair demand at steady prices. We quote: No. 5, $17.25 per gross; No. 10 $18 per gross: No. 20, $10.50; No. 120, $20 No. 51, $9.25; No. 50, $27.50.

Wire Nails—The wire nail men met this week at the Windsor Hotel and consulted with the Wholesale Hardware Association. No change was made in prices which continue firm as follows: $2.40 per keg carlots and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford and St. John.

Cut Nails—Prices continue as before. We quote $2.30 per keg f.o.b. Montreal, Toronto, Hamilton and St. John.

Fence Staples—Prices continue as follows: $3 per 100-lb keg for galvanized, and $2.80 for bright; 25 to 50-lb packages, 25c extra.

Pressed Spikes—The discount is 25 per cent.

Horseshoes—There is very little business at present. Prices have not been changed. We quote: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c per keg extra f.o.b. Montreal only.

Horsenails—There is nothing doing at present. We quote: C brand, 40, 10 and 71-2 per cent. off list; other brands 55 to 57 1-2 per cent. off.

Screen Wire Cloth—The price is $1.50 per 100 square feet.

Galvanized Coil Spring Wire—There is a better demand this week. Prices continue steady. We quote as follows: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Carlots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in carlots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—In steady demand. We quote: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11 $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots 12 1-2c extra per 100 lbs will be charged.

Barb Wire—There is very little doing at present as most retailers have bought and are awaiting delivery. We quote: $2.75 per 100 lbs f.o.b. Montreal and $2.50 f.o.b. Cleveland. Carlots of 15 tons $2.40 f.o.b. Cleveland.

Smooth Steel Wire—There is a fair trade passing at unchanged prices: Bright and annealed, $2.50 per 100 lb f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb are now as follows: Coppered wire, 60c; tinned wire, $2; oiling, 10c; spring wire, $1.25; best steel wire, 75c; bright soft-drawn, 15c; hay-baling wire, 20 to 25c.

Annealed Hay Wire—Annealed hay wire and annealed and oiled wire are now sold at list prices plus the usual extras. As noted before this is equivalent to an advance of 25 cents per 100 lbs on hay wire.

Fine Steel Wire—There is only a moderate enquiry. The discount is 25 per cent, with net extras as follows: 1 and 2-lb hanks, 25c per 100-lbs; 1-2-lb hanks, 37 1-2c; 1-4-lb hanks, 50c.

Brass Wire—The market is quiet. The discount is 60 per cent.

Copper Wire—There is very little doing. The discount is 60 per cent.

Rivets and Burrs—There is a very brisk trade passing at present and prices are well maintained. Discounts contime a s follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—A brisk trade is passing. Discounts continue as follows: Carriage bolts common, ($1.00) list

3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes 4c per lb off; nuts, hexagon, all sizes, 4 1-4c per lb off.

Washers, 45 per cent. off.

Screws—All lines of builders' supplies are in good demand at present. Good orders are being booked for screws and it is thought that orders for all sizes can be filled this season. Discounts are as follows: Round head, bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head 80 per cent.

Cordage—Cotton goods are very firmly held at prices quoted. The rope market is steady. We quote as follows: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; Russian tarred spunyarn, 13 1-2c; jute rope, 3-8-in in diameter and upwards, 9c; cotto nrope, 21c; cotton twine, 24c for 3 and 4 ply. Cotton bedcord, 90c to $1.70, according to length. Sash cord 30 to 31 1-2c; cotton candle wick, 22 to 24c.

Building Paper—There is a further improvement in the demand. Our quotations continue as follows: Tarred felt, $1.85 per 100 lb; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry sheathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c per roll.

Cement—Cement is now commencing to move, but no very large shipments will be made for the next few weeks. Prices are still as follows: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel, ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—There is a heavy movement this week and supplies are none too large for the demand. English are selling at $16 to $22 per 1,000; Scotch, $17 to $22.

PLUMBING GOODS.

Manufacturers of plumbers' supplies are now actively engaged in supplying goods for contracts, several having been closed this week. There have been few changes in prices, though on certain lines of enamelware, notably in cast iron enamelled baths, lavatories, etc., there have been slight reductions. Compression and fuller work has also been somewhat lower and good prices will be quoted on receipt of specifications. Some American manufacturers have quoted lower prices on brass goods, but as yet the reduction has not been generally adopted by the Canadian manufacturers.

Lead Pipe—There is still a good trade doing in this. The price is 8c for composition and 7c for ordinary. Discount 35 per cent.

Soil Pipe and Fittings—The demand has kept up quite satisfactorily, and a fairly good trade has been done this week. A substantial increase is remarked over the trade of a week ago. Our quotations are as follows: Light soil pipe, 3 to 6-in, 50 and 10 per cent.; medium and extra heavy soil pipe, 2 to 6-in. 60 per cent.; extra heavy soil pipe, 8-in, 45 per cent. Light fittings, 2 to 6-in, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in, 60 and 5 per cent.; extra heavy fittings 8-in, 45 per cent.

Iron Pipe—Prices are unchanged. A good trade is doing. We again quote: Standard pipe, per 100 feet, in length under 19 feet—black, 1-8-in, $2.30; 1-4-in, $2.30; 3-8-in, $2.55; 1-2-in, $2.85; 3-4-in, $3.65; 1-in, $5.20; 1 1-4-in, $7.35; 1 1-2-in, $8.95; 2-in, $12.55. Galvanized—1-4-in, $3.20; 3-8-in, $3.45; 1-2-in, $3.90; 3-4-in, $5; 1-in. $7.20; 1 1-4in, $10.05; 1 1-2-in, $12.20; 2-in, $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.; and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in, $4.20; 3-4-in, $5.25; 1-in, $7.55; 1 1-4-in, $10.55; 1 1-2-in, $12.75; 2-in, $17.60. Galvanized—1-2-in, $5.25; 3-4-in, $6.65; 1-in, $9.55; 1 1-4-in, $13.25; 1 1-2-in, $16; 2-in, $21.90. The discount on all sizes of extra heavy pipe is 12-12 per cent.

Hardware and Metal covers Canada from ocean to ocean and circulates widely through the British Isles, Australia, New Zealand, India, the West Indies, South Africa—also through the United States and Continental Europe.

Hardware and Metal covers the Hardware, Metal, Machinery, Paint and Plumbing trades of Canada.

Solder—The market shows no new feature this week. A good steady demand keeps up. Bar solder is now selling at 18c, and wire solder at 18 1-2c.

METALS.

There has been little change in the local metal market since our last report. Copper and tin have stiffened and advanced on the New York market, and here the feeling is very firm. Lead, in sympathy with the tone of the London market, is a little easier, but it is not changed in price. Business in general on the metal market has been very good, and orders have been given freely, both through the travellers' hands and by mail. A good number of orders have been received for shipment by the first boats. In steel plates, angles and other structural material, trade has been particularly active.

Pig Iron—The demand for future delivery has continued fairly good. There is little change in prices, though Middlesboro has been stiffening and is quoted a little higher this week. We quote: Summerlee, $20.25 to $20.75; Gartsherrie, $20; Carnbroe, $18.50; No. 1 Middlesboro, $16.50; No. 2, $15.50; Ferrona iron, delivered in Montreal in car lots is quoted as follows: No. 1, $18; No. 2, $17.50; No. 3, $16.50; No. 4, $16.

Bar Iron—Trade is fair and prices are steady at former quotations, which were: Merchants' bar, $1.75; horseshoe iron, $2; forged iron, $1.95.

Black Sheets—Orders for import have been given freely, and a good volume of trade has been done, at somewhat lower prices than are quoted below, under Summer freight rates. We quote: 28-gauge, $2.35; 26-gauge, $2.30; 22 to 24-gauge, $2.25; 19 to 20-gauge, $2.30, and 80 to 10-gauge, $2.40.

Steel—There is a good demand this week. Our quotations are as follows: Sleighshoes, $1.90; tire, $1.95 to $2.10; spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—A moderate trade is doing. We quote the following prices: Black Diamond, 8 to 9c; Sanderson's, 8 to 9c, according to the grade; Jessop's, 13c; Jonas & Colver's, 10 to 20c; "Air Hardening," 65c per lb; Conqueror, 7 1-4c.

Sheet Zinc—Trade is fair. We quote: $6.15 to $6.25 in cask lots; $6.50 in small lots.

Galvanized Iron—Some good orders for import are reported this week Our quotations are as follows: 28-gauge, Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz, $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c extra.

Tinplates—Prices on tinplates still keep very firm, though no advance is quoted yet, cokes selling for $3.75 and charcoals for $4.

Terne Plates—There is nothing new. The price is $6.75.

Ingot Tin—Tin in New York advanced this week and the market there is firm with a strong tendency toward still higher figures. Locally the price is unchanged, but following the New York market conditions indicate higher prices. We quote 32 1-2 to 33c.

Ingot Copper—During the week copper has advanced on foreign markets 1-2c, though for large quantities the price would probably approach the old figure. Locally the feeling is very firm at 13 3-4 to 14c per lb, though not a

great deal of business is passing just now.

Antimony—This is quoted at 8c. per lb. Trade is fairly good.

Coil Chain—The demand for chain, while good, is still reported as being less active than last year. Prices are steady. We quote: No. 6, 10; No. 5, 9c; No. 4, 8 1-2c; No. 3, 7c; 1-4-in, $6.10; 5-16-in, $4.70; 3-8-in, $4; 7-16-in, $3.80; 1-2-in, $3.70; 9-16-in, $3.55; 5-8-in, $3.35; 3-4-in, $3.30; 7-8-in, $3.25; and 1-in, $3.20 with 10c allowance on carlots.

Canada Plates—These have been selling well. Prices are maintained at last week's quotations, which are: 52s, $2.30; 60s, $2.40; 75s, $2.55; full polished, $3.60 and galvanized, $4 to $4.10; galvanized 60s, $4.25 to $4.35.

Pig Lead—The market has eased off a little, and slightly lower prices have been quoted by some firms. There is no change in the market price, and we quote: $3.40 to $3.50, according to quantity.

Zinc Spelter—There is no change whatever. We quote 6c.

Scrap Metals—The market is quiet. Rubbers form the most interesting feature. In spite of the fact that Para rubber has taken a sharp advance, scrap rubber has rather weakened, due, perhaps to the larger factory stock. We quote: Heavy copper and wire, 10 1-2 to 11c per lb; light copper, 10c; heavy red brass, 10 to 10 1-4c; heavy yellow brass, 8 1-2c; light brass, 5 1-2c; lead, 2 3-4c; zinc, 2 3-4 to 3c; iron, No. 1 wrought, $10 to $12; machinery scrap, $15 to $16; stove plate, $12; mixed country rags, 65 to 75c per 100 lbs; old rubbers 5 1-2 to 6c per lb.

HIDES.

Hides remain in about the same position as last week with considerable activity. Some slight fluctuations took place in beef hides but the same old prices were held yesterday. We quote:

No. 1 beef hides	0 08 0 08½
No. 2 "	0 07 0 07½
No. 3 "	0 06 0 06½
Lambskins	0 75
No. 1 calfskins	0 11

Market Note.

The Canada Hardware Company, Montreal, have received this week a large shipment of cast iron tinned pots and saucepans. These goods have been very difficult to obtain for some time.

ONTARIO MARKETS.

Office of HARDWARE AND METAL,
10 Front Street, East.
Toronto, March 12, 1904.

Hardware.

A GENERAL improvement all along the line is reported. Orders for Spring lines such as building paper, fencing, harness, etc., which were taken some time ago, are going out in large volume now, while many lines for the Summer and Fall are being asked for by retailers in all sections. Prices throughout are unchanged. At the meeting of the Wholesale Association the situation was canvassed faithfully and the decision reached to make no change except as to dating on wire nails from May 31 to June 30.

Chain—Last week's advance of 10 per cent. has caused liberal buying. Prices are still as follows: 1-4-inch, $5.60; 5-16-inch, $4.45; 3-8-inch, $3.85; 7-16-inch, $3.70; 1-2-inch, $3.55; 9-16-inch, $3.45; 5-8-inch, $3.35; 3-4-inch, $3.25. A good business is reported.

Step Ladders—There is a good demand for pine ladders on this market at 10c per foot for 3 to 6 feet, and 11c per foot for 7 to 10 feet ladders.

Lawn Mowers—While there is a steady inflow of orders business is not yet as brisk as a few weeks will probably show. Prices are: Woodyatt, 10 1-2 inch wheel, $8.50; Star, 9 inch, $7; Daisy, 8 inch, $5.75; Philadelphia, 7 1-2 inch, $7; Ontario, 7 1-2 inch, $15.80; King Edward, 12 inch, $9.50 (14-inch cut in above). D. Maxwell & Sons, 10 1-2 inch, $7.50 to $10; 9 inch, $5.50 to $6.25; 8 inch, $4.90 to $5.50. Discount 50 per cent.

Screen Doors—A good business is being done. Prices are nominally unchanged as follows: Common, two or three panel, walnut, 4 inch, $6.50; yellow and green stained, $6.75; in natural colors oil finish, $8.75, with 20c less for 3-inch style.

Screen Wire Cloth—Prices are steady at $1.50.

Spring Hinges—An improved trade is reported with prices steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—Business is steady at firm prices. We quote: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c per 100 lbs extra charged.

Barb Wire—Trade is moving briskly. Our quotations are again as follows: $2.75 per 100 lbs f.o.b. Toronto, and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—The business in this line is considerably larger than last season. The market is seady. We quote: No. 9, $2.70 per 100 lbs, freights equalized with factory points at Montreal, Hamilton, London, Welland or Walkerville and allowance to other points up to 25c; carlots, $2.65, freight allowance to 20c.

Wire Nails—Wholesale houses have agreed to allow dating of orders ahead to June 30 instead of May 31 as at present at $2.45 per keg, f.o.b. Toronto, with carlots $2.40.

Cut Nails—There is a fair trade, with prices steady at $2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—A moderate trade is reported. Prices show no change. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c less.

Horsenails—Orders are coming in somewhat more liberally. We still quote discounts as follows: "C" brand, 40, 10 and 7 1-2 per cent.; other brands, 55 to 57 1-2 per cent.

Screws—There is a steady demand for all sizes. Prices are unchanged, yet are decidedly firm. We quote as follows: Flat head bright, 87 1-2 per cent. discount; round head bright, 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—An active demand continues at steady quotations, particularly in belting, waggon and carriage rivets. We again quote as follows: Iron rivets, 60 and 10 per cent. discounts; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—Notwithstanding the advances in the United States the local market is unchanged and present indications are that it will remain at the present basis for some time. Prices are steady: Carriage bolts, common $1 list), 3-16 and 1-4-inch, 60 per cent.; 5-16 and 3-8-inch, 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—Deliveries of orders taken some time ago are now being made, so that orders are not coming in briskly at the moment. Prices are steady. Our quotations are as follows: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; double shingleyarn, 11c; single shingleyarn, 10 1-2c; sashcord 'Hercules,' 30 to 33c; 'Star,' 36 to 38c; cotton rope, 3-16-inch and up, 20 1-2 to 22c; 5 32-inch, 25 to 27c; 1-8-inch, 25 to 28c; cotton twine, 3-ply, 23 to 24c; 4-ply, 27 1-2 to 28c; calking cotton, 16c; cotton waste, colored, 6 3-4c; white 10 to 12c.

Building Paper—There is a more active demand for siding paper. Other lines are in good request. Prices are steady throughout. We quote as follows: Tarred felt, $1.85 per 100 lbs; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry seathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll; O.K.

and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c per roll.

Firebricks—Prices are steady, the demand active. We quote English and Scotch at 28 to 35c.

Cement—The market is keenly active and prices firm as below: Canadian Portland, $1.90 to $2.25; American Portland, $2 to $2.10 f.o.b. Toronto.

PLUMBING GOODS.

Business in the city continues particularly active but the backwardness of Spring is delaying trade from the outside centres In iron pipe, enamelled-ware and soil pipe there is an excellent trade, but in other lines there is not much doing at the moment.

Lead Pipe—Business is slow at steady prices. We quote: Lead, 7c; lead waste pipe, 8c; discount 35 per cent.

Soil Pipe and Fittings—An improvement in the demand is noted. Prices are steady. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-inch pipe 40 and 5 per cent.

Iron Pipe Fittings—A fairly good trade is doing. We quote: Malleable fittings, 20 per cent.; cast iron (standard), 57 1-2 per cent.; headers, 52 1-2 per cent.; flanged unions, 60 per cent.; malleable bushings and plugs, 57 1-2 per cent.; nipples up to 6-inch inclusive, 67 1-2 per cent.

Copper Range Boilers—A fair trade has been done since the new prices were issued. Discounts at 15 per cent. continue.

Iron Pipe—A good demand is reported, particularly from Toronto buyers. We quote as follows f.o.b. Toronto: Black pipe, 1-8-inch, $3.25; 1-4-inch, $2.07; 3-8-inch, $2.25; 1-2-inch, $2.50; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.85; 2-inch, $11.05; 2 1-2-inch, $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25. Galvanized pipe, 1-4-inch, $2.88; 3-8-inch, $3.11; 1-2-inch, $3.42; 3-4-inch, $4.40; 1-inch, $6.35; 1 1-4-inch, $8.80; 1 1-2-inch, $10.75; 2-inch, $14.80.

Enameled Ware—There is a brisk movement at the lower prices. We quote: "Standard" 5 1-2 feet rolled rim, first quality, at $21.60; second quality, $17.85. There is no change in closet quotations.

Brass Goods—Business has improved since the increasing of the discounts, which are given in detail on page 62 of this issue.

METALS.

The United States market is undoubtedly still in a strong position, but the blowing in of several furnaces and the consequent increase of production may have an unsettling effect on the market. Some Middlesboro iron is now being taken here at $19.50 per ton. Bar iron is decidedly firm. The demand for steel, particularly tool steel, has been remarkably active this season. Other metals are moving freely, prices showing no

ANOTHER REPORT ON

"ALPHA" HIGH SPEED STEEL

THE JOHN BERTRAM & SONS CO., Limited, Manufacturers of Machine Tools, DUNDAS, Ontario, Canada. Sept., 10th, 1903

Messrs. B. K. MORTON & CO., SHEFFIELD, ENGLAND.

Gentlemen:—

We have tested and used your "ALPHA" HIGH SPEED TOOL STEEL with very satisfactory results. We consider your steel as good as any other of the high speed steels which we have had in use, and can recommend it to anyone as being first-class.

Yours very truly,

THE JOHN BERTRAM & SONS CO., Limited.

OPEN HEARTH STEEL

change. There is a good demand for black sheets, Canada plates and tinplates on import account.

Pig Iron—Locally there is heavy buying at the moment, Canadian iron supplying the bulk of the demand and some British iron being taken. The quotations are: Middlesboro, $19.50; Canadian $18.50 to $19 for No. 1 and $18 to $18.50 for No. 2, f.o.b. Toronto; Midland, $1.50 lower.

Bar Iron—A fairly good trade in this line is reported. Prices are steady at $1.80 f.o.b. Toronto. For extras as cut to length while rolling, 2 feet and over, 10c per 100 lb; 1 foot and under 2 feet, 15c; under 1 foot, 20c; over 20 feet by special agreement according to length and size.

Steel—There is an active trade, particularly in tool steel. We quote: Jessop's high speed, 60c; Jessop's "Standard" tool, 14c; "Chas. Leonard," 8 to 9c; Jessop's best crucible sheet steel, 14c; Crucible Steel Co.'s "Black Diamond," 10 to 11c; "Silver," 13c; "Special," 17c; "Rex" high speed, 65 to 75c; "Self Hardening," 45 to 50c; Morton's tool steel, 14c.

Black Sheets—Orders for both import and stock are excellent. Prices are steady.

Canada Plates—Business is increasing in volume. Prices are unchanged, though firm. We quote as below: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—A large trade is doing. Quotations locally are firm but unchanged at 30 to 30 1-2c.

Galvanized Sheets—There is an excellent demand. Prices are steady throughout. Our quotations are as follows: Queen's Head, $4.25 for 28 gauge; American, $.4 for 28 gauge; Bell brand, $4.25 for 28 guage; Gordon Crown, $4.25 for 28 guage.

Tinplates—Prices are unchanged. A larger business from stock than for some time is now reported. Import business is also satisfactory. We quote: Coke plates, bright, 14x20, $3.50; charcoal plates, $4.25.

Copper—There is no change in prices. We quote: Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—A good demand for English lead is reported. Canadian lead is also in fair demand. Prices are steady. We quote $3.30 per 100 lb for pig lead and $3.65 for bar lead.

Zinc Spelter—A fair demand at 6 to 6 1-2c per lb.

Zinc Sheets—The market is firm and a fair business doing in small lots. We quote: Cask lots, $6.70 to $7, and part casks $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c, and wiping 17c.

Antimony—8c per lb.

TORONTO LIMITED MONTREAL

Old Material—Scrap zinc is a little easier this week, the price paid being 1-4c lower. No. 2 wrought is pretty shaky at 4c and is expected to drop in a week or two. Other prices are firm. We quote as follows: Heavy copper and wire, 10 3-4c per pound; light copper, 9 1-4c per pound; heavy red brass, 9 3-4c per lb; heavy yellow brass, 8 to 9c per lb; light brass 5 to 5 1-2c per lb; lead, $2.50 per cwt; scrap zinc, 3c per lb; iron, No. 1 wrought, $10.50; No. 2 wrought, $4; machinery cast scrap, $14; stoveplate, $10; malleable and steel, $4; old rubbers, 5 1-2 to 6c per lb; country mixed rags, 50c per 100 lbs.

PETROLEUM.

The market is brisk and prices firm at the following unchanged quotations: Canadian prime white, 19c; Canadian water white 20 1-2c; American prime white, 19 1-2c; American water white, 21 1-2c; ex-warehouse.

Hides, Skins and Wool.

The market is much the same as last week. Prices are firm with the exception of fleece wool, which is 1c easier. We quote:

GOOD MEN ARE STILL IN DEMAND.

"GOOD men are in demand more than they ever were. The man who succeeds is the man who is not satisfied merely to do the work laid out for him, but does more. There is as much chance in the steel works to-day for a young man to make himself useful and valuable as there ever was."—William Ellis Corey, 37 years old, new executive head of the United States Steel Corporation.

"Make yourself invaluable to your employer; study his interests in every particular; apply yourself to your task to the best of your ability, and your merit is bound to be recognized."—Alfred H. Smith, 39 years old, recently appointed general manager of the New York Central Railroad Company.

"If a young man will devote himself conscientiously, with his whole soul to the work he has to do, his rise is as certain as that of the sun each morning."—George W. Perkins, 39 years old, partner in J. P. Morgan & Company, vice-president of the New York Life Insurance Company, and chairman of its finance committee.

Mr. Corey, Mr. Smith and Mr. Perkins, are three brilliant examples of the type of successful young American business men who have revolutionized commercial methods in the United States during the last 20 years. Their spirit, the spirit that has only contempt for failure, the spirit that burns incense to the god Success, has taken a thorough hold on us, and this accounts for the truly amazing commercial prosperity of the country. In the careers of these three successful young Americans are realized the dreams of ambition which are the mainspring of hundreds of thousands of their fellow men to-day. Young men read with intense interest and admiration of their success and resolve to make such success their own.

TRADE CONDITIONS IN MARITIME PROVINCES.

From the Regular Correspondent of HARDWARE AND METAL

Halifax, April 5, 1904.

WHOLESALE dealers report a good demand for all classes of fishing and lobster packing supplies, and there is every indication that this industry will be prosecuted on an extensive scale this season. Lobsters, in common with fish generally, have been high-priced, and this has led to considerable preparation for the Spring's operations. Another line that has been selling particularly well is wire fencing of which one house has already shipped some 45 tons. Year by year the farmers are finding it increasingly difficult to secure local fencing material on their own properties and are therefore purchasing larger quantities of wire and steel fencing. At the present time there seems more activity in hardware than in other trade circles. On the first of April the Summer freights came into effect on the railways and a good many sorting orders came in from merchants at provincial points who had delayed buying in order to take advantage of this.

* * *

An executive meeting of the Maritime Hardware Association is taking place at St. John to-day. The members in attendance from this province are Messrs. Arthur, Sterns and Robertson, of Halifax, and Spinney of Yarmouth. It is probable that some slight changes in quotations will result from the conference.

* * *

The direct steamer from Antwerp with glass for Halifax wholesale houses is now on the voyage and is expected to arrive shortly. As the price of glass is open, merchants are making the usual concessions on orders booked for delivery ex steamer.

* * *

It has been definitely decided to go on with the erection of glass works at Sydney and a site has been bonded, $2,000 being paid down on it. The company is capitalized at $150,000, a large portion of which is controlled by local men. It is intended that the works when in full operation will employ about 75 men.

* * *

A. M. Bell & Co., wholesale hardware, have now taken possession of their new quarters. The building which extends the length of the block from Granville to Hollis streets, is 120x40 feet. It consists of five stories and basement on Granville street and six stories and sub-basement on Hollis street, the additional storey being the difference in the elevation of the two streets. It is of solid concrete and, we are told, is the first one in the city to be erected entirely of that material.

* * *

Douglas Prowse & Co., the latest addition to the wholesale houses of the city, have taken possession of the premises on Water street vacated by A. M. Bell & Co., and are opening up a complete stock of hardware. The new firm will devote special attention to cordage, heavy metals and fishing supplies.

Newest Artistic Ideas

Are embodied in the decorations found in our METALLIC ceilings and walls.

They make a most beautiful interior finish and in addition are so practically durable and sanitary that it is easy to understand their immense popularity.

Equally suited for use in new or old buildings.

There's big business in these lines for you.

The Metallic Roofing Co., Limited

BUSINESS CONDITIONS IN BRITISH COLUMBIIA.

By Regular Correspondent of HARDWARE AND METAL.

Vancouver, B. C. April 2.

THE opinion of wholesale men and shippers who have much to do with Dawson trade, is that the second thought of the Dominion Customs Department in re-enacting the order-in-council allowing the privilege of carrying Dawson bound goods to St. Michaels for transference to river steamers, to United States vessels, is a wise one. When the order was not renewed and the customs officials here and at Victoria were notified, the feeling was very general that the next step would be to prevent the carrying of merchandise north to Skagway from here in any but Canadian bottoms. Much to the relief of shippers, who feared the resultant diverting of trade which would have followed such a course, the Government has reconsidered its action in the matter of shipping from here to Dawson via St. Michaels.

It is, however, to be noted in justice to the Dominion Government that this is not a reversal of a previous order. In the past the course taken was to enact an order-in-council permitting the carrying of goods from here to St. Michaels for transhipment to Dawson by the lower Yukon River. This was a suspension of the coasting laws in that particular, and what happened at first was merely that the annual privilege was not renewed and the customs officials here were so notified. Now the order has again been put in force and the officials have been notified that the shipments will be allowed as in former seasons. It is further to be noted that the Canadian customs authorities are in this particular and in some others respecting the coasting regulations very much more accommodating to trade conditions than are the United States custom authorities. In the St. Michaels and Nome traffic there have been no concessions to the Canadian merchant marine. So, too, in the trade via Skagway to Dawson. The truth of the matter is that an all-Canadian railroad route is the only solution of the Yukon transportation problem.

* * *

Just what Canadian manufacturers do that they should not, and leave undone that they should do, is very tersely told by Mr. T. de Schryver, of Auckland, New Zealand, who represents the Canadian Manufacturers' Association in that colony. Mr. de Schryver arrived by the steamer Moana from Sydney, Australia, on Monday. He is most emphatic about the necessity for having a Canadian-New Zealand line of steamers, not merely for passenger service but also for merchandise. He tells how he was 32 days reaching Vancouver from Auckland, having to come by way of Sydney, while the U. S. line of direct steamers made the trip from Auckland to San Francisco in 17 days. The latter vessel left two days after he started for Sydney and reached San Francisco on March 14th, while he reached here on March 27th.

The preferential tariff enacted and put in force in New Zealand in November last is an indication of the friendly feeling the New Zealanders have for Canada and Canadian goods. By that tariff there is an advantage of fifty per cent. in duty in favor of Canadian goods. They are admitted at 25 per cent., while other goods have to pay 37½ per cent. On paper for printing, the Canadian manufacture is admitted free, while other paper has to pay a duty of 20 per cent. Formerly all printing paper was admitted free of duty.

Mr. de Schryver speaks in the highest terms of the state of credit in New Zealand. In the four years he has been act-

ing for the Canadian Manufacturers' Association, not one dollar has been lost through bad debts. If there have been any losses, they have been due to errors in shipping or in filling orders. In the latter particular the criticism Mr. de Schryver makes is that the Canadian manufacturers are either too full of local business or not sufficiently enterprising to adapt their output to the demands of the New Zealand trade. They apparently do not think it good business to make changes in stock, so that special orders can be filled. Mr. de Schryver will, however, give the manufacturers full details in person as he will spend the next three months in Eastern Canada.

The volume of trade between Canada and New Zealand can be materially increased in his opinion, as there is a great deal of business not coming here which is easily obtainable. Indeed in many instances the merchants there have standing orders to buy the Canadian make of goods if the prices are at all equal. The methods of shipping and packing came in for some criticism from Mr. de Schryver. From what he says, it is apparent that the Canadian manufacturers, especially in Eastern Canada, are unfamiliar with shipping by steamer and, as they have a trade at home where the shipping is all by rail to local points, they do not understand the methods of packing goods for steamer shipment, of taking advantage of the best method of figuring the freight rates, and of the way to bill through. One cause of trouble is that all goods from the East are sent via New York and, as the United States is a competitor in New Zealand trade, it is not an object for them to facilitate Canadian shipments. The direct line from either coast or both, is the solution of the difficulty, in Mr. de Schryver's opinion.

* * *

The wholesalers of Nelson this week had a session with Mr. F. W. Peters, assistant freight traffic manager of the C. P. R., to set forth their views as to the territory in which they should have protection against wholesale merchants from the coast and the East. They claim that at least they should have the same rates and that their customers should not be made to pay more within the territory they claim than they do when buying at the coast, at Winnipeg or at Calgary. The district they seek to include in the arrangement is from Arrowhead to the boundary, and from the Rockies west to Midway. Mr. Peters made no definite announcement as to the decision his company would make in the matter until he could consult with the traffic men of his road.

* * *

It has been definitely ascertained that there is a big change in the duty imposed by the United States Customs Department on lumber from British Columbia entering the Republic. It is now to be $7.50 per thousand for rough, which is just $5.50 per thousand higher than formerly. This added rate is exactly equal to the maximum rate imposed in the new export lumber tariff of the British Columbia legislature. That it is directly aimed at the British Columbia legislation on the export tax is seen from that very circumstance, and it is more emphatically marked by the fact that the operation of the new tariff is confined to lumber from British Columbia. Little is known here as yet about the matter, but it has been found by the men who have tried to ship that the customs authorities on the Sound have their instructions.

* * *

A syndicate at Victoria, promoted by Mr. J. Butchart, has succeeded in floating a company to begin the manufacture of Portland cement at Saanich, a short distance from Victoria. A huge plant is to be erected at Carter Bay, where vast deposits of limestone exist. An extended series of experiments has shown that this limestone is adapted specially for the manufacture of cement of the finest quality. Mr. Jos. Wrigglesworth has for years been experimenting with the limestone and his success induced the investment of capital in the enterprise. The work will begin at once and a large number of men will be given employment in the industry.

* * *

The Silver-Lead Mine Owners' Association of British Columbia met in Nelson again last week to discuss further the proposition to send a memorial to the Dominion Government, requesting that the bounty be paid on all surplus lead ore raised which cannot be handled in the province. The draft copy of the memorial was agreed upon but withheld from publication until the committee which has it in charge meets a deputation from the smelter owners, when it will be definitely fixed and signed by both smelter men and mine owners and forwarded to the Government.

* * *

A great deal of satisfaction has been expressed among mining men over the decision of the Dominion Customs Department to admit free of duty crude petroleum imported by miners for use in the Elmore oil reduction process. This system is being rapidly adopted and promises to revolutionize the treatment of low grade ores in the Kootenay.

* * *

There is a possibility of the New White Horse gold fields having a rival in the public interest this Spring. News has just reached Victoria from Telegraph Creek, away up the Stickine River, of the finding of another rich deposit of placer gold on the Nahaani River, near the junction of the Dease and Liard rivers. Jack Hyland, a pioneer of Telegraph Creek has brought to Victoria a large sample lot of the gold taken out, which he purchased from Indians at $17 per ounce. All the prospectors in that northern district are making for the new find over snow and ice, and the news has created a great deal of interest at the coast. It has long been known that the Dease River district is rich in placer gold, and the first stories of gold there were told as early as the first days of the Cariboo. Not only here but at Edmonton are men who have been in that district and one or two at least of the old pioneers at Edmonton secured gold enough from claims they found to make them independent for life. Of these perhaps the best known is "Bill" Cust who, until a very recent date lived near Edmonton and was a wealthy rancher, his first capital having been got from the Dease River gold.

PIG IRON AND STEEL AT PITTSBURG.

Pig Iron—The pig iron market continues strong despite the absence of important buying, apart from the Steel Corporation's purchase of 10,000 tons of Bessemer at $13.60 to $13.70. Foundries are buying in small lots only, but more generally, and a continuous operation of the mills in this district will result in much work for the local foundries whose work depends largely on the rolling mill trade. While there has yet been no direct intimation that the corporation will accept the May iron on which it has an option, it is almost a certainty that this will be done, as all of its steel mills are short of iron. Bessemer for delivery during April, May and June is held at $13.35 at the furnace, while for prompt iron $13.50 is asked. No. 2 foundry is selling at $14, Pittsburg, as the minimum and the general market is from $14 to $14.50. Forge is firm at $13.25 to $13.50, with little buying. Demand for basic is improving and it is quoted at $13.25, Valley furnaces. Within the next three months five new steel works blast furnaces will be blown, while two new stacks were blown in this week. These seven new furnaces will have a daily capacity of 3,500 tons and an annual output of a trifle over 1,000,000 tons. In addition one stack that has been undergoing repairs will be blown in shortly, while another stack that has been idle for several months will resume in a week. All of these furnaces will produce iron for steel manufacture and their activity will be at the expense of Valley merchant furnaces unless demand increases materially. We revise quotations as follows:

Bessemer, Valley	$13 35 to 13 50
Bessemer, Pittsburg	14 20 to 14 35
No. 1 Foundry	14 75 to 15 00
No. 2 Foundry	14 00 to 14 50
Gray forge, Pittsburg	13 25 to 13 50
Chilled basic, Valley	13 25 to 13 35
Chilled basic, Pittsburg	14 10 to 14 20

Steel—Billets and bars for prompt shipment continue scarce and premiums continue to be paid. On a small lot of sheet bars for prompt shipment a premium of $2 a ton was paid this week. Steel Corporation companies are not accepting any business for early deliveries not only for domestic steel but foreign as well. No change in prices is anticipated at the billet meeting to be held next week. Agreed quotations are as follows: Bessemer and open-hearth billets, 4x4 inches, and slabs, up to and including 0.25 carbon, $23, Pittsburg, Wheeling, Valley, Johnstown, Ashland, Ky., Ironton, O., and Lorain, O., 0.26 and including 0.60 carbon, $1 advance; and 0.61 to 1.00 carbon, $2 advance. Billets smaller than 3 7-8 inches and sheet and tin bars are $1 per ton extra. Bessemer and open-hearth rods are still quoted at $30 to $31, Pittsburg.

HARDWARE CONDITIONS IN MANITOBA.

Office of HARDWARE AND METAL
Room 308 McIntyre Block,
Winnipeg, April 8, 1904.

THE business situation has been anything but pleasing and the merchants report that things in general have been very quiet for the past week. The expectation for better prospects is anticipated for this week, as the various railway lines which have been snowed up for such a long time are now opening up and traffic is again beginning to move along slowly. The market practically remains the same with no change in prices of any note.

* * *

Wm. Whyte, second vice-president of the C. P. R., has made the announcement that the lumber combine which has existed in Manitoba and the Territories for some time is now a thing of the past. Some time ago Mr. Whyte said that if it were necessary the C. P. R. would install their own mills in British Columbia and sell through their agents. That announcement caused the mill men to make arrangements with the C. P. R. whereby lumber will be sold in the open market.

SCALES.

Champion Scales

Grocers' Scales
Butchers' Scales
Family Scales

Platform Scales, from 600 to 2,000 lbs capacity.

Patent Swivel Wheels applied to Platform Scales make it possible to turn scale in any direction within its own length when loaded to full capacity.

Imperial Standard Scales

Hay Scales
Stock Scales
Coal Scales

We handle a complete line of scales, from a small Letter Scale to a great Railway Track Scale, weighing 100 tons.

We also handle all classes of scales for railway use.

All Scales inspected and stamped by Government Inspector. Certificate accompanies each scale.

Dealers, write for our latest Scale Catalog and Price List.

Estimates furnished for installing large scales on application.

PITTSBURG METAL MARKETS.

CONTINUED strength is shown in pig iron and finished products, and the prevailing opinion is that the situation is assured until July 1. There has been practically no buying of iron for delivery beyond the middle of the year, although the tonnage of finished products for delivery the second half is growing larger every day. Demand for plates and structural shapes is improving, steel car plants and structural shops buying plates more freely, although the shipbuilding trade is still backward.

The ore meeting has been postponed until April 12. It is to be held in New York and will be followed by meetings of producers of billets, structural shapes, etc. The plate meeting is scheduled for Thursday of this week. Unless the merchant ore producers consent to act in unison with the other ore interests this year, the larger producers have announced that there is very little likelihood of such an association in the future.

The orders taken by the export department of the United States Steel Corporation for billets, sheet and tin bars are heavier than generally believed by the trade. Orders for these materials for delivery this year aggregate nearly 250,000 tons. Owing to the strengthening of the domestic market and the higher prices made on these products by the German steel syndicate advances of about four shillings have been made by the export company of the Steel Corporation. No orders for billets are now being taken for delivery before June, and for this delivery 80 shillings is asked, delivered Liverpool, Antwerp or Manchester, while sheet and tin bars are held at an advance of one shilling a ton. Less than a month ago billets were sold for delivery at these points at 76 shillings 6d and bars at an advance of one shilling. Considerable business is still being offered and the indications are that a considerable tonnage will be placed in the next few months despite the German competition. Billets at 80 shillings will net the works, Pittsburg, about $16.50, while some of the business taken abroad a few months ago netted the works a trifle under $15 a ton. The Duquesne works of the Carnegie Steel Co. are now running full on billets and bars for foreign shipment, and orders in hand will keep the mill on in full until nearly the middle of the year.

To-day the delegates of the sheet and tin plate lodges of the Amalgamated Association are meeting for the purpose of reconsidering the refusal to accept the recent reduction in wages. As noted last week the reduction was rejected by an overwhelming vote. An amicable adjustment is looked for. An analysis of the vote showed a majority of the tin workers employed by the American Sheet and Tin Plate Co. in favor of the reduction, while the almost unanimous votes of the employes of the independent sheet and tin mills caused a rejection of the reduction.

For Pig Iron and Steel Report see Page 38.

Rails and Track Material—There has been practically no new business in standard sections, although several roads are reported in the market for small lots. The demand for light rails is improving somewhat, but low prices continue to be made. We make the following quotations: Standard sections, 50 pounds and over, in lots of 500 tons and over, $28; car lots and less than 500 tons, $30; less than car lots, $32; 16 to 40 pounds, $23 to $24. Track material: Spikes, 1.65c to 1.70c.

Structural Material—Demand is improving very materially, the buying more general, but no large contracts are being closed. Prices are unchanged as follows: Beams and channels, 3 to 15 inches, are quoted, 1.60c; 18 to 24 inches, 1.70c; tees, 1.65c; zees, 1.60c; angles, from 3 to 16 inches, 1.60c; universal mill plates, 1.60c.

Bars—Specifications continue heavy, but there is little new business. All of the mills are operating at their utmost capacity and the market is in good condition. We make the following quotations: Bar iron, 1.40c to 1.45c, Pittsburg, for local delivery, while for Western shipment quotations are based on 1.35c, Pittsburg. Hoops are held at 1.40c base, and bands at 1.35c taking bar extras. Bessemer steel bars, 1.35c; open-hearth, 1.40c; plow beams and cultivator beams, 1.35c, net; channels, angles, zees and tees, Bessemer, under 3 inches, 1.45c. The following differentials are maintained on steel: Less than 2,000 pounds of a size and not less than 1,000 pounds, 10 cents advance; less than 1,000 pounds of a size, 30 cents advance.

Sheets—Demand for sheets has improved during the week and there is little shading of prices. The trend of the market in the next few days will depend largely on the action of the special convention called by the Amalgamated Association.

Wire and Wire Nails—Demand for wire products and nails continues strong, although no advance in prices is looked for at the present time. On cut nails slight advance would not surprise the trade. We quote: Wire nails, carload lots to jobbers, f.o.b. cars Pittsburg, $1.90 base, plain wire, carload lots, $1.80 base; barb wire, carload lots, $2.20 base; staples, carload lots, $2.05 keg. Galvanized, 30 cents extra. Carload lots to retailers are held at 5 cents advance in all lines, and on less than carload lots a further advance of 10 cents is charged. Steel and iron cut nails, carload lots, $1.75, and less than carload lots, $1.80, f.o.b. Pittsburg, plus freight to point of destination. Terms, 60 days, less 2 per cent. off in 10 days.

Merchant Steel—A continued improvemen is noted for all grades of merchant steel and the mills are operating more fully than at any time in the past six months. We quote: Cold rolled and ground shafting 52 off in carload lots and 47 per cent. off in less than carload lots. Tire steel, 1.50c, base; spring steel, 1.90c to 2c; toe calk, 1.85c, base.

Pipes and Tubes—Orders placed for pipes and tubes during the first quarter of the year are exceedingly satisfactory and the buying thus far this month is equal to that of the first week in March.

Coke—Demand for foundry coke has been quite heavy in the past week, the buying being more general than for several months. In addition deliveries are becoming better, due to the better car service afforded the shippers in the Connellsville region. One order for about 15,000 tons of 72-hour foundry coke for delivery to next April was placed at $2, which is considered an excellent purchase under present conditions. The range of prices on foundry coke for delivery the next three to six months is still wide, some producers quoting as low as $2.15 for excellent product, while others are securing as high as $2.50. Furnace coke is being offered more freely and prices range from $1.60 to $1.65. During the week ending Saturday, March 26, the production of the upper Connellsville region reached 202,172 tons and the lower region's output amounted to 50,136 tons, a slight falling off as compared with the production the previous week.

TRADE IN COUNTRIES OTHER THAN OUR OWN.

The British Iron Trade.

THE report of the Board of Management of the British Iron Trade Association was read at a meeting of that body held at the Westminster Palace Hotel on Thursday. It dealt generally with the condition of the iron trade, and also referred incidentally to the fiscal question and other matters. The volume of home business for 1903, it said, was not what it had been in some previous years, but the volume of exports was larger than in the previous 12 months. The increase of exports was mainly due in the earlier months of 1903 to pig iron on American account. The condition of the home steel trade had been sensibly affected by imports on an unprecedentedly large scale. In so far as those imports were semi-products, sold at a low price for the purpose of being rolled into sheets, plates, etc., they had affected the home trade more or less favorably; but, on the other hand, the same imports had had a more or less adverse influence on the steel works which devoted themselves to the production of blooms, billets, etc., in the United Kingdom. The mere fact that so much finished material had been imported for British consumption from foreign countries was a strong evidence of the persistent competition which our manufacturers had to meet in almost every branch of production. As to the trade outlook, the depression which had overtaken the United States after several years of prosperity threatened to bring about a new American invasion of British markets on a hitherto unapproached scale. This had led to an increase of American dumping in some of the neutral markets, more especially in Canada, where the prices quoted were 15 to 25 per cent. less than in the United States itself. This fact pointed to less favorable competitive conditions for our own manufacturers in the future. The proposals of the Tariff Commission had been put before the members of the association, with the result that 90 per cent. of the replies desired that some change in the present system should be made. The majority, at the same time, declined to commit themselves to the precise character of the change. The question of iron ore supplies was next dealt with by the report, which stated that the threatened approaching exhaustion of the iron ore deposits suggested the importance of securing foreign supplies that might either now or at some future time be made available for the British iron trade. Extensive orders during the past twelve months have been placed in Great Britain for rolling stock for the Central South African Railways. No fewer than 1,750 large steel wagons have been contracted for, included in this number being several wagons of a capacity of over 35 tons. These last are being built by the Leeds Forge Company, and a number have recently been shipped to South Africa. They are 39 feet 3 inches in length, 7 feet 5 5-8 inches wide, and 9 feet 9 inches in height above the rail level, with a cubic capacity of 1,428 feet. The wagons are fitted with patent steel underframes and bogies, and are provided with longitudinal doors, which can be automatically opened or closed. Before being shipped to South Africa the wagons were submitted to a test load of 240,000 lbs. of pig iron.—Iron and Steel Trades Review, March 25.

The Proposed German Steel Trust.

IT is now becoming apparent that the idea of organising the entire steel trade of Germany in the form of a gigantic trust on American lines, although without any consolidation of share and bonded capital, has little prospect of being realized on the plan which was originally contemplated, and the probability exists that a price war will soon be commenced both in regard to the inland trade and the export branch to Great Britain, Belgium and other countries. The official returns of the German Iron and Steel Institute, which were issued a few days ago, show that the total production of pig iron in 1903 amounted to 10,085,634 tons, or an increase of 20 per cent. over 1902 and of 18 per cent. over 1900, which was the record year in the history of the country. The greater portion of this quantity of pig iron has been converted into steel, and the object of the trust is to secure control over no less than 8,587,724 tons of steel now annually produced by 28 of the principal works. It is, however, becoming recognized that the interests of all the 28 works cannot be satisfactorily reconciled, and that these companies and firms are dividing themselves into two groups. The first group, or the insiders, are represented by some of the large Rhenish-Westphalian works and the works in Lorraine. Fifteen of these insiders have just succeeded in arriving at an agreement among themselves, and they represent 66 per cent. of the contemplated production of 8,587,724 tons per annum. It is also hoped to soon obtain the adhesion of five other firms, and the production brought under control would then be increased to 77 per cent. It is extremely doubtful whether the outsiders will associate themselves with the trust. If not, the fifteen works will proceed to put into execution their threat to start a war of prices with the outsiders in order to compel them to abandon their opposition. The important matter, from the British producing standpoint, is that the fifteen works already in harmony are those which are so largely concerned with the export of semi-finished steel products and joists and girders, and that the syndicate they have now practically created intends to embark upon a price war, the effects of which will doubtless be experienced in external as well as inland markets.—Kuhlow's German Trade Review, March 16.

British Tin and Copper Markets.

London, April 6.—Spot tin opened easy at £128 2s 6d, futures £128 7s 6d, and after sales of 360 tons of spot and 70 tons of futures closed weak at £127 7s 6d for spot and £127 10s for futures, making price as compared with yesterday £1 5s lower on spot and £1 5s lower on futures. Singapore quotation for tin to-day was equal to £128 15s London, 12s 6d higher than yesterday's closing.

London, April 6.—Spot copper opened firm at £58 17s 6d, futures £58 12s 6d, and after sales of 300 tons of spot and 450 tons of futures, closed easy at £58 12s 6d for spot and £58 7s 6d for futures, making price as compared with yesterday 2s 6d lower on spot and 5s lower on futures.

250 MILES OF FENCING.

Mackenzie, Mann & Co. have awarded a contract to the McGregor-Banwell Fence Co., of Walkerville, Ont., for 250 miles or Ideal woven wire fencing, including erection for the Canadian Northern Railway for use in Manitoba and N.W.T.

PAINT, OIL AND BRUSH TRADES

White Lead Analysis.

A REPORT on "White Lead in Oil, 1903," has been issued by Thos. Macfarlane, chief analyst, Inland Revenue Department. In the preface to the report Mr. Macfarlane says that in accordance with instructions of August 11, he collected 147 samples of white lead in various districts of the Dominion, 40 of them in the Maritime Provinces, 33 in Quebec, 44 in Ontario and 30 in Manitoba and West. The table appended to the report "gives the names under which these samples were sold, and the results of their examination in this laboratory, as well as the names of the vendors and furnishers of the samples. Besides ascertaining the absence of 'barytes,' the commercial name of the mineral, barite, finely ground, or its percentage when present, search was made for the acid-soluble sulphuric acid and lime, in order to detect adulteration by sulphate of lime or by common whiting. These, it will be observed, were very seldom found, the chief adulterant being barytes.

"The table also gives in the remark column the conclusions drawn by myself from the results of the testing, according to which the total number of samples examined may be classified as follows:

Genuine	100
Slightly impure	2
Adult rated, but not sold as pure	2
Adulterated, but sold under special names	25
Adulterated, sold as white lead	12
Prepared paints not sold as white lead	6
Total	147

"In explanation of the foregoing it may be stated that the samples characterized as genuine are those which have been sold as pure in accordance with the provisions of the Act in restraint of fraudulent marking. This Act prohibits the use of the terms 'pure' or 'genuine' for white lead in oil, unless the article has the composition specified in schedule A of the Act. The two 'slightly impure' samples were no doubt intended for genuine, and the very small amount of insoluble matter present was probably accidental. The two samples 'not sold as pure' have been called adulterated, although the vendor showed good faith in making the declaration. The large number of samples sold under special names have been named 'adulterated' in accordance with former practice, and because their sale contravenes the spirit of the Adulteration Act, which defines an article as adulterated if 'any substance has been mixed with it, so as to reduce, lower or injuriously affect its quality or strength.' Besides, the special names do not indicate the 'mixed' or 'compound' nature of these samples as required by the Act; neither do they declare to the purchaser that he is being served with an inferior article. Twelve samples were sold simply as white lead, but were largely adulterated, and were not labelled as 'compound' or 'mixture.' Finally, seven samples were purchased by the inspectors which were plainly declared to be 'paints' by the vendor and are known to be articles quite different in character from 'white lead in oil.'"

Canadian Minerals for Paints.

The Ontario Geological Survey Department has completed an investigation of importance to persons concerned in the making of paint. The object of the work was to ascertain the possibility of using the mineral varieties for the manufacture of pigments or paints of all colors. The investigation involved examination into the properties of mineral pigments, such as exact shade of color, smoothness of grain, persistence of color when exposed to air and light, processes of treatment to fit them for use, and various other points. The work resulted in the discovery of many interesting circumstances. Some new tints were found which will prove of value to the craft of decorators.

Paint and Oil Markets

Quebec.

Office of HARDWARE AND METAL.
232 McGill Street.
Montreal, April 7, 1904.

GENERAL conditions in the paint and oil markets are much the same as at the time of our last report. Turpentine shows a further weakness and has been marked down 2 cents per gallon. The Spring crop is now in sight and still further reductions may be expected soon. Linseed oil remains steady at former quotations. It is impossible to quote shellac varnish with any reasonable approach to exactitude as the range of prices is very wide. The market for gum shellacs is very strong and the supply small; hence prices for shellac varnish are stiffening. As stated last week, one manufacturer is considering the advisability of withdrawing all quotations and accepting orders only subject to the market.

Business this week shows a marked improvement. Lower freight rates went into effect on the first of April and large shipments are now being made. Collections are not all that might be desired, but there has been some improvement which is expected to continue with the opening up of the country roads. We quote:

Ground White Lead—Best brands, Government standard, $4.50; No. 1 $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead—$4.25 in casks, and in kegs $4.50.

Dry White Zinc—Pure dry, in casks, 6 1-4c; in 100-lb kegs, 6 3-4c; No. 1, zinc, in casks, 5 1-4c; in 100-lb kegs, 5 3-4c.

White Zinc—(ground in oil)—Pure, 25-lb irons, 8c; No. 1, 7c; No. 2, 6c.

Putty—Bulk, in barrels, $1.50; in 25-lb tins and irons, $1.80; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7c; 100-lb kegs, 7 1-4c; smaller quantities, 8 1-4c.

Red Leads—Genuine red lead, in casks, $4.25; in 100-lb kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks, $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge—Ground, casks, 5c; in less quantities, 5 1-2c; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 47 to 48c; 5 to 9 barrels, 46 to 47c; boiled, 1 to 4 barrels, 50 to 51c; 5 to 9 barrels, 49 to 50c. Delivered in Ontario between Montreal and Oshawa at 2c per gallon advance.

Turpentine—Single barrels, 87c; 2 to 4 barrels, 86c. Standard gallon of 8.6 pounds.

Shellac Varnish—Pure white, $2.85 to $3.50; pure orange, $2.75 to $3.40; No. 1 orange shellac, $2.45 to $2.60.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil—8 3-4 to 9 1-4c in wholesale lots, and 1-2c additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c; 25-lb drums, 15 1-4c; 1-lb packages, 16c; 1-2-lb packages, 18c; 1-lb tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c per lb; 25 lb drums, 15 1-2c; 1-lb paper boxes, 16c; 1-lb tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

Ontario.

Office of HARDWARE AND METAL.
10 Front street east.
Toronto, April 7, 1904.

FROM all quarters come optimistic reports of the paint trade outlook. Retailers are starting to buy freely and wholesale houses are kept busy keeping up to orders. Consequently a general feeling of confidence is manifested. In less than five hours the representative of a Canadian paint, lead and varnish house sold over 38 tons in London, Ont.

Prices are steady as a rule, but turpentine continues easy. One firm quotes a reduction of 4c, which makes their quotations 87 1-2c for single barrels. Otherwise there is no alteration in the market prices. We quote:

White Lead—Ex-Toronto, pure white lead, $4.65; No. 1, $4.20; No. 2, $3.90; No. 3, $3.50; No. 4, $3.25 in packages of 25 lb and upwards; 1-2c per lb extra will be charged for 12 1-2-lb packages; genuine dry white lead, in casks, $4.50.

Red Lead—Genuine in casks of 560 lb, $4.25; ditto, in kegs of 100 lb, $4.50; No. 1, in casks of 560 lb, $3.75 to $4; ditto, in kegs of 100 lb, $4.25.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c per gallon.

Paris White—90c to $1 per 100 lb.

Whiting—60 to 65c per 100 lb; Gilders' whiting, 75c.

BRANDRAM'S B.B. GENUINE WHITE LEAD

has long been known as the best white lead the world produces. It is unequalled for whiteness, fineness and body, and will cover more than any other white lead manufactured. It is the only white lead used in the manufacture of

Anchor and English Liquid Paints.

This, together with the most permanent pigments known and the finest grinding in genuine Linseed Oil, Turpentine and Dryers, combine to make a paint that is unapproachable.

TORONTO.

The demand is improving steadily and prices are stronger though no change is shown. We quote: Star, first break at $3.30 per 100 feet and Double Diamond, first break, at $5.10. Discount 15 and 20 per cent.

Winnipeg Glass Works Ready.

The Consolidated Plate Glass Co., Toronto and Winnipeg, have installed a new, up-to-date and completely equipped glass beveling and silvering plant in connection with their Winnipeg plate, sheet and fancy glass warehouse, and are now ready to turn out quickly all orders for beveled plates, British mirrors, plain and beveled; ground and polished edges, etc.; German mirrors, plain and beveled.

Their present plant, they claim, gives them an advantage in time of delivery, of several weeks over an Eastern factory, and lessens risk of damage in transit, as the longer the haul the greater the risk of breakage. With the present facilities they can now ship promptly so they solicit enquiries and orders from the trade.

Products of the Oil Refinery.

THE crude oil is pumped from the oil fields to the tanks at the refinery. The first product that comes off as the process of distillation proceeds is naphtha, says the Oil Reporter. This is followed by gasoline. Then comes kerosene and after that "signal" oil, a heavier oil, which is used in signal lamps. There are numerous lubricating oils, the most delicate of which is dynamo oil, a thin, fine oil suitable for delicate machinery. Then there are twenty or more greases, including a mixture of yellow and black grease, which is sold for axle grease. There is a heavier grease, which is used to grease rails at railroad curves, so as not to wear the flange of wheels and to protect the rails. A delicate product is paraffin, which is used by housewives to protect canned fruit. The final product of the crude oil is a form of coke, which is the last throw-off of the original crude produce. It is burned in a grate like coal or is manufactured into the insulation that is used to protect wires of various kinds.

STOVES AND TINWARE.

The Spring Stove Trade.

STOVE manufacturers have become accustomed to the gradual shrinking of the stove trade in the Spring, until the business done of late years is practically nothing compared with the Spring trade of a quarter of a century ago, states the Metal Worker. This year there is apparently less than heretofore, which is probably due in no small measure to the fact that the Winter has been extremely severe, and the close of the first Spring month hardly gives evidence that it has passed. For this season the present condition of the trade resembles that of the latter part of February in ordinary years. The trade has manifested an interest in the seasonable goods and the new goods which have been brought to their attention, but with weather conditions as they have been, there was no incentive to place orders or make purchases. In consequence, both in coal stoves and oil stoves, the orders are very much belated, and there is some possibility of the shipping facilities of manufacturers becoming overwhelmed when the natural demand for goods makes its appearance.

Apparently, price is not much of a factor in the question, the attractions which the goods offer being of greater interest to the buyer. It is fortunate that this view of the situation is taken by the purchasers, for the reason that there is nothing in present indications that warrants a demand for a concession in prices. Notwithstanding the scarcity of orders there is no evidence of a desire to force sales. Of course, with the conditions as outlined there is little or no encouragement for the practice which in dull seasons some are inclined to follow, to book orders, with the object of working off stock or to aid them in meeting bills that are coming due. The business conditions seem to be devoid of any unusual features, and the stove men, as well as dealers in other lines, will do well to consider fair prices in their buying, and then to base their selling prices accordingly. There is no room for any concessions when there is nothing in the conditions that indicates the likelihood of any wide fluctuation.

Second Hand Stoves Profitable.

Says a dealer in the Stoves and Hardware Reporter: We find the second-hand stove business a very profitable one. We buy and trade second-hand stoves of all kinds. This branch of our business is kept entirely separate, having a room fitted up for the purpose. These goods oftentimes net us more clean money than new goods. A man comes to us in the early Fall to trade stoves. We trade him a new stove, getting our price, and get the old one at a very low figure. This stove is then taken into the second-hand room and the necessary repairs made thereon, after which it is polished and placed on the sale floor, and oftentimes brings a better margin of profit than new goods. We have found this very successful having sold as high as one hundred good second-hand stoves in a single season.

Tinners' Torches.

THE Canadian General Electric Co., Toronto, have issued a leaflet describing the torches they are offering for tinners, plumbers, etc. The following claims for the torch are made in the leaflet. "The tank is drawn out of heavy brass, free from seams, and all fittings are heavy. Reinforcements are used to make an extra strong tank. A brass air pump of the latest design screws into the tank and is submerged in gasoline, which aids in keeping it cool, and also protects it from injury. The burner used is a strong generator, producing a clear, blue, blast flame, using very little gasoline. In fact, the user will soon save the cost of the torch in the saving of gasoline alone; with it he can do any work that can be done with any round-burner torch. The No. 2 is light, well balanced, easily handled, and is sure to please. Only the best of workmanship and materials have been used. It is supplied in polished brass or nickel-plated, as desired."

Stove Firms Disagree.

The William Buck Stove Company, of Brantford, fear an infringement of their designs by the Guelph Foundry Company, and have issued a writ for an injunction to restrain the latter company from applying the Buck Stove Company's Industrial design to their stoves. They also ask for the delivery to them of all stoves of this design and patterns in the possession of the Guelph company and for an account of the profits made by them.

HEATING AND PLUMBING

Master Plumbers' Association of Ontario.

A Record Attendance From all Over the Province.

ON Friday last week the Master Plumbers' Association of Ontario marked a step forward in the completion of their organization, and reached a point which ensures strength and solidity for years to come.

From all parts of Ontario plumbers, gas and steam fitters, etc., gathered in Hamilton to accept the hospitality of their fellow craftsmen there, to consider the conditions affecting their business and to take steps towards the protection of their rights and towards raising the standards of sanitary work throughout the province.

On Thursday evening a conference was to have been held between representatives of the supply houses and the officials of the association, but owing to the festivities of the night before many of the manufacturers' representatives were not on hand and the conference was necessarily deferred.

Toronto.—Wm. Mansell, J. H. Wilson, L. Legrow, W. H. Meredith, Joseph Wright, J. B Fitzsimons, C. H. Beavis, J. J. McKittrick, K. D Allison, Geo. H. Cooper, Geo. Clapperton, D. Morgan, J. B. Reeves, W. B. Inwood, W. G. J. Adams, Fred. Armstrong and R. W. Harrison.

Hamilton.—W. J. Walsh, Ald. H. Wallace, S. Mellon, W. G. Smith, W. J. Clark, T. Jones, J. S. Kennedy, W. J. Fi zsimmons, H. Morley, A. Rodgers, J. H. Stewart, W. Clark.

London.—E. H. Russell, W. Smith, B. Noble, A. Rich, T. F. Needham, R. J. Haslett and Wm. Skelley.

Orillia.—T. Phillips.

Perth.—W. G. But'er.

Stratford.—J. Myers, H. J. Peters, F. Smith and F. J. Sylvester.

Lindsay.—J. Boxall.

Mitchell.—H. J. Clegg.

Peterboro'.—T. D. Macgregor.

St. Catharines.—S. P. Gourlay, C. H. Hooper and A. Riddell.

Ingersoll.—S. King.

Guelph.—H. Mahoney, A. Malcolm and F. Smith.

Galt.—James Scott.

Brantford.—T. A. Cowan and Chas. Taylor.

Berlin.—A. Sacks, H. L. Hymmen.

Barrie.—J. H. Neelands and G. H. Ling.

Collingwood.—R. McQuade and Wm. Parrott.

The dominant thought of the convention was the necessity of closer organization. It was deemed by many to be advisable to have a permanent organizer and much of the afternoon was spent in discussing this proposition and the work that would be entailed in organizing the province thoroughly. Eventually President Mansell, Treasurer Wilson and Robt. Harrison, of Toronto, were appointed an organizing committee with Secretary W. H. Meredith working in conjunction with them.

Grievances of members of the association against manufacturers were carefully considered and a project mooted to have an agreement with manufacturers to stop the sale of plumbing goods to consumers.

The reports of the officers were particularly gratifying. Secretary W. H. Meredith reported the membership as 135, an increase of 35 in the year.

President Wm. Mansell.

The officers elected were as follows :

President.—Wm. Mansell, Toronto.

Vice-President.—W. J. Walsh, Hamilton.

Past-President.—S. P. Gourlay, St. Catharines.

Treasurer.—J. H. Wilson, Toronto.

Financial-Secretary.—L. Legrow, Toronto.

Organizer and Secretary. — W. H. Meredith, Toronto.

Executive.—The above officers and E. Russell, London; H. Mahoney, Guelph, and G. Milne, Hamilton.

THE BANQUET.

The event of the convention was unquestionably the banquet, given in the "Waldorf" on Friday evening. In addition to a full attendance of master plumbers the following representatives of supply houses and manufacturers were noted :

Peter McMichael, Thos. Worthington and W J. Fulton, of The Dominion Radiator Co., Toronto.

E. H. Gurney and W. L. Helliwell, of The Gurney Foundry Co., Toronto.

W. H. and L. L. Anthes, of The Toronto Foundry Co.

Geo. Gouinlock, of The Toronto Hardware Co.

M. P. Huffmann, of The Canada Radiator Co., Montreal.

And. Mann, J. A. Maclaren and Geo. C. Pearsall, of The Stevens Mfg. Co., London.

A. A. McMichael, W. Sheppard, Jack Foster and E. A. Rogers, of The James Robertson Co., Toronto.

A. Somerville and W. A. Porter, of The Ontario Lead and Wire Co., Toronto.

J. D. Rosebaum, of The United Brass Co., Cleveland, O.

F. W. Armstrong, of The James Morrison Co., Toronto.

D. Young, of The Wolff Mfg. Co., Chicago.

The chairman of the evening was S. Mellon, president of the Hamilton association, who proved to be an expert toastmaster. The musical director and master of ceremonies in the refreshment department was Ald. H. Wallace, whose genialty and watchfulness over the comfort of the large number present contributed much to the success of the evening.

The excellence of the menu may be judged from the items below :

MENU.

Fruit Nuts Raisins
American Cheese
Soda Biscuits
Cafe Noir

After "The King" had been toasted with musical honors Chairman Mellon called on W. H. Meredith to reply to the toast of "The Dominion."

Secretary Meredith said he had prepared a speech for the occasion but the lively proceedings of the day had knocked them out of him. He was in good voice, however, and soon had his audience in a high degree of enthusiasm over the glories, past, present and future, of the Dominion. He drew a graphic picture of the development of the country from the days of the hardy pioneers and their log cabins to the present time of

thoroughly modern residences, churches and hotels, stores and public buildings. He was proud of his country, of its business men and particularly of the men who contributed so largely to the health and comfort of its people — the plumbers. During recent years a noble sentiment had won great attention throughout the country. The motto "Made in Canada" was one that found a responsive note in every true Canadian breast, and if the Canadian manufacturers of plumbing goods only treated the plumbers right as to the quality of their goods and the manner in which they sold them they would get loyal support. The forests of other days had given way to the fertile grain fields of to-day. He hoped to see the day when, in Ontario at least, even the wheat fields would be turned into sites for factories and mills whose chimneys would some day make a forest to take the place of the forests of old.

Vice-Pres. W. J. Walsh.

President Wm. Mansell was then called on to respond to the next toast, "Our Association." He claimed he had a better excuse for a poor speech than Mr. Meredith, as someone had walked off with his notes. He was, however, overjoyed at the attendance at the convention. It was not merely large but was representative of the best plumbing intelligence from almost every section of the province. He desired that every plumber present should fully recognize the purpose of their association and so read over sec. 2 of the constitution and by-laws, as follows :

This Association is organized for sanitary, commercial and social purposes, and has for its special object the advancement of trade in all the latest discoveries of science appertaining to sanitary laws; to promote and combine the interests and influence of members for the protection of trade against imposition, injustice or encroachment upon our common rights and interests, encouraging inventions and improvements in sanitary appliances; fostering an interchange of thought, and eliciting and communicating for the benefit of each member the best talent and the result of the experience and ability of all; to promote amicable relations with employes on the basis of mutual interest and equitable justice to both journeymen and master plumbers; to encourage Dominion and Provincial legislation for the furtherance of the interest of sanitary laws; to secure for the members of the trade equitable treatment in their dealings with manufacturers and dealers in supplies; to regulate the system of apprenticeship and employment, so as to prevent as far as possible the evil growing out of deficient training in the responsible duties of selecting, arranging and fitting up materials relating to the hydraulic and sanitary condition of dwellings, public and private institutions; to create and maintain a sanitary code at as high a standard as the progress of science (chemical, philosophical and mechanical knowledge) teaches. And we agree to carry forward with tireless zeal the work to which the above language relates.

Ontario was in natural resources one of the richest spots in the whole earth. Her minerals, forest wealth, fisheries and agriculture combined to make her people exceptionally prosperous. The sanitary laws of its principal cities, Hamilton excluded, were much above the average, the mechanical skill of the plumbing craft was unsurpassable and the inspection was both rigid and fair.

Chairman Mellon called on Mayor Morden, of Hamilton, to respond to the toast of "The Mayor and Council." The remarks of his worship were brief but very cordial. He was particularly impressed with the high order of intelligence manifested by the large number of those engaged in plumbing and kindred work. He was glad they were meeting with such success in cementing their organization, for it would be to the general advantage when nothing but the best grade of plumbing was done in the province.

W. A. Edwards, architect, Hamilton, was invited to respond to the toast "The Architects." He had come into close touch with the Hamilton plumbers and had found them as skilful and ingenious as the best, either in plumbing or steam fitting. He was also frequently in touch with the work in Toronto and had studied the working of the by-laws there. In it he thoroughly believed. The effect of it would be to protect the public from incompetence. "The present is an age of specialists," declared Mr. Edwards, "and the plumbing trade calls for so much real science and skill that one must be a specialist to make a success of it."

"The Board of Health" was responded to by Ald. Wallace, who gave a comprehensive talk on the steps taken by that body in Hamilton to preserve the health of that city. The only defect in their system, in his opinion, was the lack of a proper plumbing by-law.

At this stage of the proceedings an event took place which took President Mansell by surprise. The executive had decided, and had been supported by all present in the decision, that the services of Mr. Mansell in organizing and helping to bring to such a success in three years the Ontario Master Plumbers' Association were such that he should be shown how much they were appreciated. Consequently a gold headed cane was procured and to Secretary Meredith was assigned the task of presenting it. This he did now, at the suggestion of the chairman, in his usual eloquent way.

"The Plumbers' Union" was toasted next, the response coming from W. Harris, secretary of the Hamilton union. Mr. Harris drew attention to the fact that the majority of the masters had been journeymen at one time; that the journeymen had, like the masters, organized to protect and further their own interests. There was no reason why the interests of the masters and journeymen should conflict, and he trusted that they would not in the days to come.

"The Hamilton Association" was toasted with exceptional fervor. Vice-President W. J. Walsh, who responded, was as proud as he was pleased. It was something to remember that in Hamilton had gathered the biggest convention of master plumbers ever held in Canada. It was something to remember, too, what a cordial spirit of friendliness and good-fellowship had permeated the gathering from start to finish. He wished that the next convention in Peterboro might be even larger and more effective.

Fin. Sec. L. Legrow.

"The Supply Houses" was responded to by Peter McMichael, And. Mann, H. Anthes and E. H. Gurney.

Mr. McMichael had attended many banquets but could not remember one more representative of the plumbing fraternity. The Canadian plumbers seemed to know how to get together about as well as they know how to do good work.

And their work could not be surpassed. He was gratified at the way Secretary Meredith's views regarding Canadian goods had been received. It was in this way a national spirit would be aroused and the country made strong and vigorous in every way.

Mr. Mann had for 25 years been in touch with the plumbing trade in Canada and in that time the advances had been remarkable indeed. From the pan closet had evolved the modern fixture

Treas. J. H. Wilson.

and from the zinc tub the splendid iron one of the present day. This was due partly to the way in which the plumbers had sought to improve their work and partly to the progressiveness of the manufacturers who were keeping abreast of the times in every way.

Mr. Anthes was pleased to respond to the toast as the supply men had no reason to be ashamed of the way they were looking after the interests of their customers. So enterprising had they been, in fact, that whereas a few years ago most of the plumbing goods were imported, now the big bulk of it was produced in the country. That meant more work, a more convenient supply and a better condition of affairs generally. He hoped Hamilton would get in line and pass a plumbing by-law, for under present conditions the manufacturers were able to sell all their inferior goods in Hamilton.

Mr. Gurney was gratified by the thoroughness of the organization. It was proof the masters had grasped the possibilities of the future years. The manufacturers were giving the proof of their grasp of the situation by extending their works in every way and by steadily improving the quality of their products. A progressive manufacturer and a wide-awake plumber made a strong team, one that could pull well together and which he hoped, in the interests of all concerned, would pull together.

"The Local Association" was responded to by R. Ross, Toronto; A. Riddell, St. Catharines, and H. Mahoney, of Guelph.

Mr. Ross gave a short sketch of the work done by the Toronto organization; Messrs. Riddell and Mahoney contented themselves with an expression of goodwill from the local to the provincial organization.

"God Save the King." "Auld Lang Syne."

NOTES.

Membership : 135; an increase of 35.

Peterboro will be the next rallying place.

"Robert Ross is about due to get caned soon," said one enthuziastic Toronto member.

Girls to wait on the tables; it was certainly a new thing for the plumbers. A collection was taken up for them and a cream jug full of silver was the result.

A. Smith, Stratford, was looking forward to a good building year. "We have our organization in excellent shape," he said. "We use high-class goods and expect to be kept busy."

C. T. Bull, St. Thomas, was happy over his prospects this year. "We are going to have a good building season," he said, "and as our people ask for a good class of work we expect a good year."

Past President Gourlay expected a busy season in St. Catharines. "Our manufacturers have been so busy that houses are not to be had. So they must go up. And plumbing fixtures are being insisted on now."

W. G. Butler, Perth, had ample faith in his town. "We are to have a first-class sewerage system in connection with our water works," said he, "and some good houses are to be put up. We will be busy all right."

Wm. Smith, London, reported the prospects only fair there. "There is not much showing in the architects' offices yet," he explained. "Yet it may be that building is only backward and may be brisk enough before the season is over."

J. D. Rosebaum, of the United Brass Co., Cleveland, was busy distributing the "glad hand." The United Brass Co. are manufacturers of high-grade brass goods of all kinds and are anxious to get a grip on the Canadian market. Their representative was certainly a busy one.

Mr. Young, Canadian agent of the Wolff Mfg. Co., Chicago, had every good word for the Canadian plumbers. "They appreciate the best quality of goods," he said, "and although there is 30 per cent. duty on our line we are still able to sell much of our best grades on the Canadian market."

"Andy." Mann of the Stevens Mfg. London, Ont., was enthusiastic. "Why, things are going along splendidly," said he, "travellers' orders are coming in freely and their reports all point to a prosperous season. We have increased our staff and added to our plant so are ready to take care of the additional orders."

R. McQuade, of McFadzen & McQuade, and Wm. Parrott, Collingwood, were looking forward to a good year in that place. "We had an excellent season last year," said Mr. McQuade, "and there is every prospect of another active one." "Besides," added Mr. Parrott, "we may form a local association and so prevent foolish cutting. There is not much doing as yet, though."

"The trouble in Berlin and that section of the country," said Peter Hymmen, of H. L. Hymmen, "is the high wages. For instance, after plans had been prepared for a separate school in Waterloo it was found that the masonry contract alone exceeded the entire estimate. Consequently the whole job was never touched. Still there is a certain

Organizer W. H. Meredith.

amount of building that must be done and we will be fairly busy."

W. L. Helliwell, of "Gurney's," and "Joe" Allan, narrowly escaped the Hamilton dungeon, if all accounts be true. It is beyond dispute they hired a picturesque donkey cart and drove up the Main street of the city to the door of the Waldorf. Some of those present say the Hamilton police put them under arrest for "getting gay," but they deny the charge and the bulk of evidence seems to be in their favor.

Winnipeg Master Plumbers Meet.

THE Winnipeg Master Plumbers' Association gave their first annual banquet on Thursday evening, March 31, an excellent attendance being present. A. J. Hammond, of Hammond and Rodway, presided.

The toast list was short but the speeches were entertaining and bright. The health of the King was drunk with every manifestation of loyalty, after which "Manitoba" was toasted.

John Stevens, in responding to this toast, referred to his recollection of John Norquay, 18 years ago, when Winnipeg had 18,000 inhabitants, and the province produced a crop of wheat of about 44,000,000 bushels. He compared this with its present output, and showed that although many had had hard times and could well remember them, all were making rapid progress to success now. He thought there was a great future for the trade in Winnipeg, but advised caution in doing business while so much speculation was rife.

J. Drewe, of the Gurney Foundry Co.'s staff, responded for the manufacturers and supply houses. He said the attendance spoke well for the prosperity and remarkable progress made in the trade and of the magnitude and quality of work undertaken by the different Winnipeg firms. The history of the growth of the Plumbers' Association corresponded with the growth of Winnipeg and the great Northwest provinces, and there was good reason for being hopeful. Western men were enthusiastic because they believed there was no country like it—so large, undeveloped and capable of supporting millions. All were hopeful and had courage to meet any difficulties that might arise.

Mr. McLaren, of Fairbanks Co., also responded to the toast.

C. E. Gates and R. H. Lear suitably responded to the toast of "The Craft," and Messrs. Newman and Stevens humorously replied for the "Ladies."

Building Notes.

A SIX-STOREY brick and stone building is to be erected at the corner of Notre Dame and St. Lambert streets, Montreal. Messrs. MacVicar & Heriot are the architects.

Halifax is to have a new school building to cost from $25,000 to $35,000.

A two-storey four-roomed school building is to be erected at Pilot Mound, Man.

The Euclid avenue Methodist church, Toronto, are going to erect a new church to cost $75,000.

F. Ford, Winnipeg, is building a frame residence on Alfred avenue. F. R. Evans is architect.

The Davis Leather Co., Newmarket, Ont., are building new tannery buildings. O. E. Tench, Newmarket, is the architect.

The First Baptist church of Winnipeg is to be enlarged to give a seating capacity of over 1,500. It will be completely remodeled.

The Dominion Government has purchased the property on which to erect the new post office in Winnipeg. It is expected that work on the building will commence in July.

Real estate has been booming in Morden for some time, owing to bright prospects for this year's building on the woollen mills, cement works, judicial buildings and new flour mill.

In Brantford the building boom has not as yet commenced. The building permits issued have been very few and nearly all for additions or extensions. However, Thomas Lister is building a brick house on Murray street, to cost $1,000.

The majority of buildings being erected in Vancouver this Spring are dwellings. During the past month very many building permits have been issued ranging from $1,000 to $5,000. The $5,000 permit is one for a residence for V. Mitchell at the corner of Chilco and Robson streets.

E. S. Coppins, of Woodstock, who has been conducting an extensive business in plumbing, heating, gas fitting and electric wiring, has purchased the entire electric stock of John Lee, of Woodstock. Mr. Coppins' increased trade in the electric line has warranted this addition to his business.

Building Permits.

TORONTO.

Obadiah Bell, a two-storey roughcast dwelling on Hogarth avenue, to cost $1,200.

Jos. Fleming, a two-storey brick and stone dwelling on Margueretta street, to cost $1,100.

Fred Perry, a two-storey brick printing office on Adelaide street west, to cost $3,000.

Percival Leadley, a two and one-half-storey residence on Elm avenue, to cost $10,000.

C. V. Mitchell, a two and one-half-storey brick and stone dwelling on Yonge street, to cost $2,000.

E. T. Humphrey, a two-storey brick undertaking office at 510 Spadina avenue, to cost $1,200.

Robt. Cook, three attached, two-storey and attic dwellings on Albany avenue, to cost $3,200.

J. Drury, one paid semi-detached, two-storey dwellings on Westmoreland avenue, to cost $2,300.

Wm. Dulmage, a one-storey brick and concrete store and dwelling on Queen street east, to cost $1,200.

R. McCauley, a pair of semi-detached two-storey and attic brick dwellings on Albany avenue, to cost $5,600.

Mary Phillips, a pair of semi-detached two-storey and attic brick dwellings on Avenue road to cost $3,000.

W. Blake, a two-storey and attic brick dwelling on the corner of Powell and Dale avenues, to cost $1,000.

A. E. Peglar, a two-storey dwelling on Pape avenue, to cost $1,400; also a pair of semi-detached, two-storey dwellings on Simpson avenue, to cost $3,000.

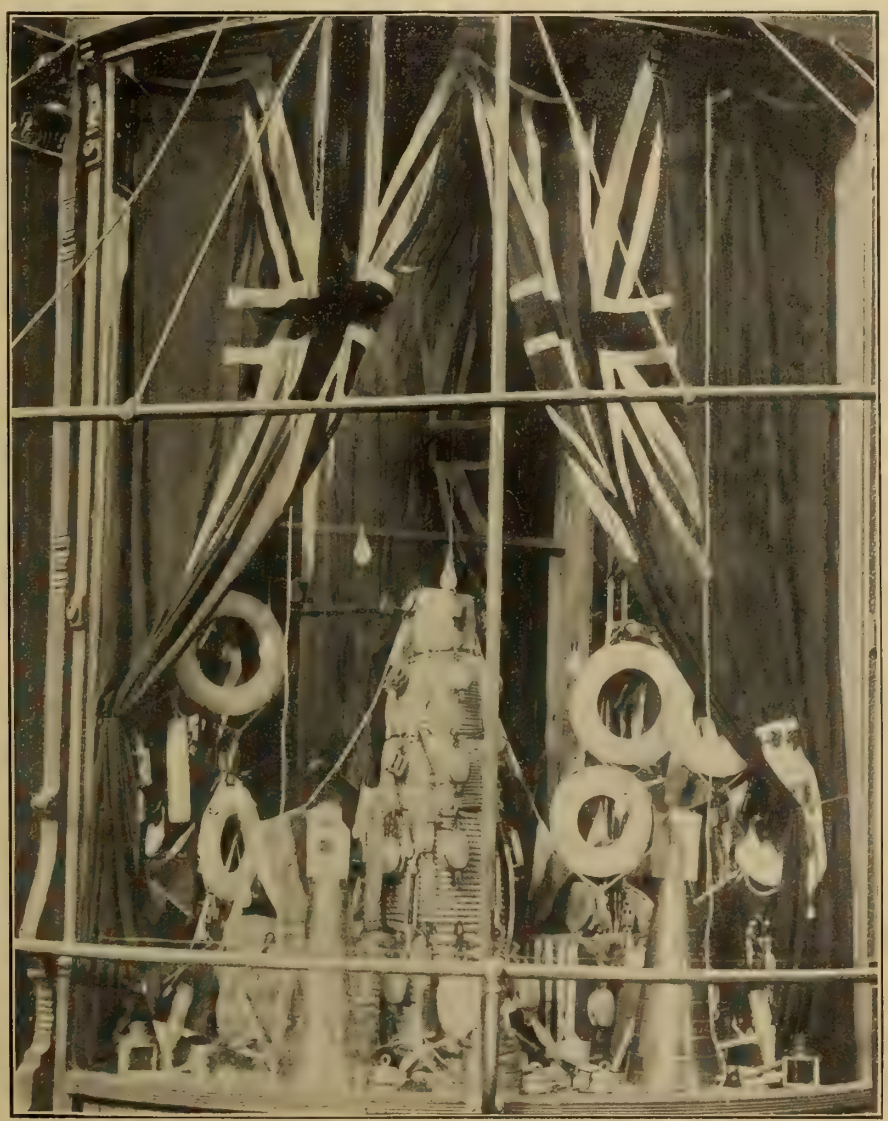
Window and Interior Displays

Timely Hints and Suggestions

THERE are various permanent but removable trimmings that can be used by hardwaremen as auxiliary decorations for their windows. These may partake of the nature of a background, a wall, a division in the centre of the window, or any other form devised by the window dresser, and either allowed to remain in for some weeks at a time or removed and replaced as occasion requires, or as will be considered effective.

If often happens that, particularly if the window be large, a temporary division is desired so that a couple of displays can be made in the same window. This is simply and neatly effected by constructing a lattice work of lath the length of which is equal to the depth of the window and the height sufficient to conceal one display from the observer when the other is being looked at. This lattice work is preferably a dark, inconspicuous color, and it is a strange fact that although the meshes may be large, the display on the other side is never noticeable. The same fixture makes a good wall decoration, and is far more sightly than any paper that can be put on. The window entirely surrounded with lattice work is one of the neatest edges to almost any display. The centre or dividing one is sometimes constructed in fancy shapes, high at the back and sloping in a graceful curve to the front, the latter being sufficiently high, however, to effectively divide the sections.

In the same class of decorations is the scheme adopted in the accompanying cut of a window of fishermen's supplies, shown by Rice Lewis & Son, Toronto. In this window has been draped for weeks, whatever the display might be, a pair of British flags. They are simply tacked to the top and draped in at the side. The result is that the staring bareness of the top half of such a large window is prevented and the gaze is concentrated on the goods set out by the window trimmer. Although these flags have remained without change for a long time they have not lost their virtue, but are now considered as a part of the window, almost like the ornamental edging at the front bottom, or the door jamb. Of course its value will decrease, but it can then be easily removed and the window is no worse off than before. A certain tea company has adopted the same decoration as an accompaniment for a display of its goods and considerable attention has been drawn to the windows. There is an idea, too, contained in this for the wholesaler or manufacturer. Many of them now send out with their goods advertising matter, and ornamental boxes or cards that enable an observer to pick out the goods immediately as so-and-so made by so-and-so. If the manufacturer sent a plan for a window and could have a display of his goods arranged in the same manner all over the country he would receive a good advertisement.



A Display of Fishermen's Supplies—Rice Lewis & Son, Toronto.

In this window are well set up almost everything a fisherman needs, — pulleys, anchors, ropes, megaphones, fish lines, life preservers, lanterns, row locks, fish hooks, wire rope, etc. In the back is a pile of ropes, varying from large up to small, and hooked in around these are pulleys and other things. In the front are two large megaphones, over the mouthpiece of one being the Japanese naval ensign and over the other that of the Russians. Hanging on the sides are life preservers, while the floor is covered with an assortment of odds and ends, all connected with the fisherman and designed as reminders of his needs.

A TRADE WORTH DEVELOPING.

DURING the next four months the hardwareman who does all his business within his own store makes a serious mistake. This is the time of the year that it pays to be outside frequently, to be on the alert for buildings, projected or being erected.

Reports from all over Canada indicate an exceptionally brisk season in all building operations. And the class of houses erected in the country is steadily improving, with the result that hardwaremen can, if they go after it, get much more business in this direction than they have ever done in the past.

Hardware and Metal would suggest that every retail hardwareman, stove dealer, tinsmith or plumber who gets this paper should carefully study its advertisements and see if they are not missing opportunities for extending their trade.

Among the lines advertised which should interest them particularly in relation to building operations are paints, heating goods, cement, structural steel, metal roofing and ceilings, building and roofing paper, builders' tools, electric fixtures, sewer and drain pipe, fencing, mantels, screen doors and windows, in fact almost everything, except the lumber and masonry, which enters into the construction of a building of any kind.

The fact that these goods are advertised in this paper is clear proof that the advertisers have learned that all of these lines can be sold to best advantage through the retail hardware trade.

In the majority of places the retail trade is fully alive to the situation but in some cases they have come far short of making the most of this opportunity.

Now, Mr. Hardware Merchant, think this matter over. Is there an advertiser in this paper whose goods you do not handle? If so have you given him or his wares a fair chance? Other hardwaremen, in the villages, in the towns and in the cities have; why not you?

For instance, do you know all there is to be known about mantels? About structural steel? About roofing supplies? About cement? If you do not, sit down now and write to those who are advertising to you and ask them to tell you what they want you to do and what profit they will allow you. And

DO IT NOW.

Kent & Turcotte have been appointed curators to C. Garceau, general merchant, St. Garnabe.

PIG IRON FOR IMPORT.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

THE Cold Air Electric Power Co., Limited, Montreal have been capitalized at $20,000, to carry ated with a capital of $20,000, to carry on in all its branches the business of an electric light, heat and power company. The directors of the company are : B. Sawyer, H. Timmis, Westmount, Montreal; W. A. Rohr, Sorel; C. L. Papineau, Montreal.

The new saw mill of the Arrowhead Lumber Co. of British Columbia will soon be completed and will be in operation about the middle of May. This mill will be one of the most modern of saw mills, being equipped with the latest improved machinery. The output will be $100,000 feet of lumber per day.

The first annual report of the International Nickel Co., Sudbury, Ont., has been issued. The total net earnings of the company for the year ending March 31, are nearly $1,200,000. When the new smelting plant now in course of erection at Sudbury is completed it is expected that these earnings will be trebled.

The Eze Manufacturing Co., Limited, Toronto, have been incorporated with a capital of $40,000, to take over the business of the Eze Manufacturing Co., and to manufacture and deal in soaps, washing compounds, druggists' and grocers' sundries. The directors are : C. W. Barnes, R. Barnes and S. M. Barnes, all of Toronto.

The Leamington Canning Co., Limited, Leamington, Ont., have been incorporated with a share capital of $40,000, to can fruit, vegetables, poultry and meat of all kinds, and to manufacture jams, jellies, etc. The directors are: L. Wigle, L. H. Robinson, W. J. Hazelton, A. L. Brown and W. W. Hilborn, all of Leamington.

The Horn Bros. Woollen Co., Limited, Lindsay, Ont., have been incorporated with a capital of $100,000, to take over the business and plant of Messrs. Horn Bros., Lindsay, and to manufacture and deal in woollen and cotton goods. The directors are : A. Horn, J. S. Horn, H. J. Lytle, J. D. Flavelle and J. Carew, all of Lindsay.

A large consolidation of copper mines in British Columbia is being put through at the present time. The Morrison smelter, the Dominion group of smelters, the Sunset smelter and the Boundary Falls smelter are to be taken under incorporation as the new Montreal & Boston Consolidated Mining and Smelting Co., capitalized at $5,000,000.

G. G. S. Lindsey, K. C., one of the directors of the Crow's Nest Pass Coal Co., has returned from a visit to the smelting works of the Amalgamated Copper Trust in Montana, where he was working in the interests of the Crow's Nest Pass Coal Co., trying to secure that market for their coke. He anticipates that his visit will be a successful one.

The Marshall Sanitary Mattress Co., Limited, Toronto, have been incorporated with a capital of $100,000, to take over the business and plant of the Marshall Sanitary Mattress Co., Toronto, and to manufacture and deal in mattresses, pillows, cushions and upholstering. The directors are : W. D. Wilson, J. A. Whaley and W. S. Scott, all of Toronto.

NOTES.

Vokes & McCurrah, carriage and wagon manufacturers, Toronto, have dissolved partnership.

The output of the Dominion Coal Co. for March shows a material increase over that for February.

There is a possibility of the Canadian Hardware Specialty Co., Limited, locating at Toronto Junction.

Baird Bros., furniture manufacturers, Platsville, Ont., whose factory was burned down recently, have started to rebuild in Plattsville.

Dominion Paper Box Co., incorporated under the laws of the Dominion Government, have been granted a license to carry on their business in Ontario.

The nail department of the American Steel & Wire Co.'s plant at Rankin, Penn., has been destroyed by fire. The estimated loss is from $175,000 to $200,000.

Extensive development work will be commenced at the Old Gold, the Mountain Lion and the Primrose mines in British Columbia as soon as the trails are passable.

A. L. Wisner & Co., incorporated in the United States, have been granted a license to carry on their real estate business in Ontario, provided that they do not use a larger capital than $40,000.

The Mic-Mac Gold Mining Co., Millipipsicit, N. S., are installing new machinery. The company has purchased a water power at Port Medway River, and they intend to run their plant by electricity.

Lazier Paper Mills, Limited, Belleville, Ont., have been incorporated with a capital of $50,000, to manufacture and deal in paper of all kinds and its products. The directors are : S. A. Lazier, R. E. Lazier and A. E. MacCall, all of Belleville.

C. Kloepfer & Co., Guelph, Ont., are about to erect a new factory for the manufacture of wood work for buggies, wagons and cutters. The main building will be 100 feet by 50 feet, and the boiler room 30 feet square. The cost will be $12,000.

J. G. Ramsey & Co., Limited, Toronto, Ont., have been incorporated with a capital of $50,000, to manufacture and deal in photographic supplies. The directors are R. Burritt, T. G. Delamere and F. B. Deacon, all of Stratford, Ont.

R. W. Strong has organized a company of American capitalists to start gold mining in Labrador. The capital of the company is $2,500,000. An expedition is being fitted out at St. John, N. B., which will sail for Labrador about April 20.

The Island Granite Co., Limited, Toronto, have been incorporated with a capital of $200,000, to develop granite and marble quarries in Ontario, and to manufacture and deal in granite. The directors are J. Grant, M. A. Grant and J. L. Grant, all of Toronto.

Guelph has lost an important industry in the complete destruction by fire of the Petrie Cream Separator factory. The machinery is a total loss. The boiler room, however, was not damaged to any extent. The estimated loss is $100,000, of which $20,000 is covered by insurance.

The United Arts and Crafts, Limited, Toronto, have been incorporated with a capital of $40,000, to manufacture and deal in furniture, furnishings and decorations for houses and public buildings. The directors are : D. K. Ridout, A. B. Neilson and C. A. Hulme, all of Toronto.

The James Innes Milling Co., Limited, Hartney, Man., have been incorporated with a capital of $55,000, to carry on a general grain-milling, warehousing and elevator business. The directors are : James Innis, F. Hill, E. H. Laughlin, R. A. Creighton and L. Reid, all of Hartney.

FINANCE AND INSURANCE

A SOMEWHAT new departure is to be taken in the United States in regard to the subject of life insurance, it being proposed to deliver lectures before various universities in Ohio, Illinois, Minnesota, Iowa, and Colorado on the subject of life insurance. The course of lectures are to be delivered by a well-known authority on insurance, and although the lecturer is travelling under the auspices of one of the leading insurance companies of the United States it is said that no attention will be drawn to this particular company. Of course, the company expects to get its compensation, not only from the general and increased interest which it is expected the lectures will excite, but it will naturally leak out in some way that this particular company is footing the bill. This announcement will, of course, be somewhat of an advertisement.

Why should not one or more of the companies in Canada inaugurate a similar campaign? Old as is the subject of life insurance there are still a great many people in gross ignorance of the subject and who require a great deal of educating in regard to its advantages. Rather than that one company should take it up it would be, perhaps, better that a number should combine for the purpose of paying the expenses entailed in such a campaign. And if the life insurance companies why not the fire insurance companies as well?

* * *

REPRESENTATIVE MORRELL, of Pennsylvania, who introduced a bill in the House of Representatives, Washington, to regulate child insurance and regulate the transmission of matter relating to insurance through the mails, has introduced a revised bill, in which he omits everything relating to the mails. His present bill proposes to create a bureau of life insurance in the Census Office and to require all persons, firms, or corporations transacting the business of life insurance within any state, district, territory, or insular possessions of the United States to file certificates from the proper officer or department of Government of such state, district, territory or insular possession, or of some foreign Government showing that he has lawful authority to engage in such business. The bill also proposes to require the refunding of part of the amount that has been paid in premiums on policies that are allowed to lapse in cases where the premiums are collectable in weekly or monthly installments.

* * *

THE Russian Government has elaborated statutes on on general life insurance by the state. The business is to be intrusted to the governmental savings banks. All kinds of policies will be issued and the insured will participate in the profits of the business. The insurance of the employes on all the Government railroads is in working order since July 13, 1899. Up to July 14, 1900, the number of policies issued was 6,770, to the amount of $3,220,318, and 7,336 newly presented petitions to join the association were in the hands of the authorities. The Government proposes, after a lapse of a certain number of years, to make the railroad employes' insurance obligatory. The premiums are to be paid monthly by deduction from the salaries of the insured.

* * *

IT is said that a very small part of the $20,000,000 German loan that was negotiated in New York five years ago now remains there, and that the conversion scheme proposed by the Imperial Government will have little application outside of Berlin. The conversion changed the 4 per cent. Treasury notes to a 3 1-2 per cent. basis, although it is understood on London advices that an arrangement was been made whereby holders may decline to make the change. The first instalment of the loan falls due this month and the second instalment in June.

* * *

THE strenuous Winter has been the cause of very heavy loss to the railways of Canada. Their lines, however, are now practically clear, and, although the earnings of the Grand Trunk for the third week in March still show a decrease of $92,000, this compares very favorably with the previous week's decrease of $137,000. The C.P.R. has not at any time suffered as severely as the Grand Trunk, but even the most sanguine will be surprised to find that for the third week of March their gross earnings were $849,000, or an increase over the same week in 1903 of $9,000. Already Germany, according to Aemilius Jarvis & Co., of Toronto, has been purchasing in our market and in New York on the strength of this increase, and, barring any news of a special character, we should think that this stock would improve.

Paterson's Wire Edged Ready Roofing

has successfully stood the test of Canada's variable climate for over twenty years, and is the only popular substitute for shingles.

We are advertising the above Roofing extensively in the "Farmers' Magazines" and in all cases we ask prospective customers to order our goods from their local Hardware Merchants.

There will be a very large quantity of our Ready Roofing sold in the future, and you can't blame us if you don't get your share of that trade.

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

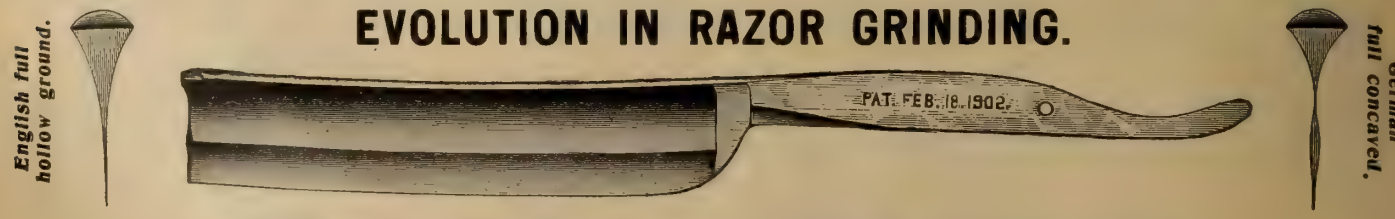
75 YEARS *ESTABLISHED 1825.* *75 YEARS*

EVOLUTION IN RAZOR GRINDING.



THE AMERICAN DOUBLE HOLLOW.

Have you ever seen a razor too good to be used on your face?

The old-fashioned way to grind a razor was the English full hollow, but it was found that, if ground thick, it was harsh on the face, if very thin it would vibrate or would not shave clean.

About 30 years ago a new style of grinding was invented, the German full concaved; this was found better; it had only one fault, being thick above the edge it cannot easily be kept sharp on a strop, you have to hone it very often. We are making a newly Patented Razor, the American Double Hollow, which has two distinct hollows. This razor, if properly used on a strop, practically never needs honing, because it is so thin above the edge. Try it and you will be more than pleased.

AGENTS FOR CANADA { Caverhill, Learmont & Co., Montreal. / Rice Lewis & Son, Limited, Toronto. } **GEO. W. KORN RAZOR MFG. CO.,** *LITTLE VALLEY, N.Y. U. S. A.*

is mixer, kneader and raiser all combined. As a mixer and kneader the action is such that the moisture is thoroughly distributed, allowing every particle of starch to expand and become digestible. The kneading is done in a perfect and scientific manner, thoroughly and evenly mixing all the ingredients, so that better and more wholesome bread is the result than in the old way.

None so Blind As Those Who Won't See.

HARDWARE AND METAL can prove of valuable assistance to the selling end of any business which seeks trade among the hardware and general storekeepers of Canada.

We advance many plain, indisputable arguments to this effect.

And still there are some folks who can't see it.

Some who can't see how it's going to pay them.

And won't even invest a few dollars to find out.

Very few folks like this, but we would like to convince even them.

If we only could, we'd get a good deal of satisfaction out of it—and we know they would, too.

Don't you think they're blind to their own interests?

Here's a paper that finds a welcome in every worth-while hardware store from Halifax to Vancouver once every week—so can't you see that an announcement of any interest must surely command some attention?

The advertising columns of HARDWARE AND METAL provide about the best way we know of keeping in close touch with all the hardwaremen of Canada all the time.

You can see value in a paper like this—

Can't you?

THE

CUSHION FRAME

is the Trade Mark of a perfect Bicycle

Put the cushion frame on display and leave the rest to that taking way it has with those who incline to out-of-doorness.

Out-of-doorness is the vogue. In the United States the movement for more out-of-doorness is stronger than in Canada. And the bicycle is the quickest way to out-of-doors.

It is the business of the hardware dealer to supply out-of-door wants. The bicycle firm that gave the movement its start in Canada asks your co-operation.

The cushion frame bicycle also carries the Morrow Coaster Brake—the best device of its kind. This season's Canada-made wheel has points of superiority over all other makes.

KEMP MANUFACTURING CO., TORONTO, CANADA.

CO-OPERATIVE TRADING IN EUROPE

IN an address delivered in England in 1874 Prof. Goldwin Smith said that when negotiations were once going on between Napoleon Bonaparte and the Austrian Government, before the treaty of Campo Formio, the Austrian Government offered as a concession that they would acknowledge the French Republic. "The Austrian Government might as well offer to acknowledge the sun in heaven," was young Bonaparte's answer. And an attempt to defend co-operative stores, continued Professor Smith, to attempt to show that co-operative stores might be successful and beneficial would be like offering to acknowledge the sun in heaven.

Since that time the co-operative movement in England has made enormous strides and in the twenty-six years preceding 1890 the sales made through the societies amounted to the almost incredible sum of £471,200,000, and the profits for the same period amounted to nearly £40,000,000. In 1890 there existed in Great Britain one thousand five hundred and fifteen societies with over a million members and a capital exceeding £11,000,000. Their annual business at that time amounted to upwards of £40,000,000 and their yearly profits to £3,755,646. Of the number of members of the societies Lord Rosebery said: "We have an army as great again as the army Napoleon led into Russia, and the capital of the movement is as great as the national debt of England in the reign of Queen Anne; and the co-operative annual income is as great as the income of England during the reign of William III."

Mr. Gladstone speaking at West Calder in 1890, remarked that co-operation in the distribution of commodities was attended with immense economy. "Most heartily," he said, "wherever it can be had, in manufacture or in agriculture, I for one cordially wish it well."

The co-operative societies in England are chiefly trading concerns, but they also carry on numerous mills and factories and many of them own a large number of houses and other properties which have been acquired for the use and benefit of their members. Mr. Holyoake, author of the "History of Co-operation in England," and other economic works, says: "The reader who has proceeded thus far will understand what are the signs of the co-operator and will almost know him at sight. You may know one in the streets of Yorkshire—the men are better fed and the women better dressed, the children are healthy and plump. In the face of a co-operative workman there is more satisfaction, his face has fewer furrows of care." The same author further says: "No store ever fails that pays a fair dividend and no store ever fails to pay a fair dividend whose members buy at it."

At the British Co-operative Congress held in 1902, reports were received from 1648 societies doing business in the United Kingdom, with a membership of 1,919,555, a share capital of £24,595,706, and profits of £9,000,000, or nearly 37 per cent. on the share capital. The annual sales reported for 1901 were £81,782,949.

Prominent among the English co-operative societies are the wholesale concerns, which are really the purchasing organizations for the retail stores throughout the country. The Economic Review for April, 1903, speaking of the annual report of the co-operative wholesale societies says:

"The Wholesale Annual, as it is popularly called, never appears but it has a tale to tell of growing business and strength which thoroughly astonishes outsiders. For what is related must appear to them truly fabulous. The Manchester society alone has in the latest instance in the report for 1901 £17,642,082 of sales to record, as compared with only £8,766,430 ten years previous, and £3,574,095 in 1881, and only £758,764 in 1871. That society began business in 1864. Up to 1901, inclusive, it sold in all £208,163,058 worth of goods, netting £3,073,251 of profits, which means that the latter sum has been paid back through this society into the pockets of the purchasers. From year to year the society has gone on extending its business, perfecting its methods, widening its sway like a great empire; laying new provinces under contribution, unceasingly conquering, annexing, absorbing, consolidating. It has its branches and depots now established all over the world, in Australia, in Ceylon, in France, in Denmark. It runs its own flotilla of steamers backwards and forwards to interconnect them. It grows its own tea out in China on its own plantation. It manufactures its own boots and shoes, every description of clothing, its own furniture, its own soap, cocoa and other provisions.

"The Scottish wholesale co-operative society, which is smaller and newer, but really more abreast with the times, comes in to swell the total by £5,700,743 of sales in the year, with £251,686 profit."

IN GERMANY, AUSTRIA AND FRANCE.

Complete statistics concerning the co-operative societies of Germany are not available. The principal sources of detailed information about them are the reports published by the Central Union. The union, however, only furnishes statistics for those societies which accept its rules and make regular reports to its central office. The co-operative movement in Germany appears to have originated near the middle of the last century and in 1888 a statement compiled by the union gave the names of 5,950 societies with two million members and an annual business of about $700,000,000. The German societies carry on various lines of business, including banking and manufacturing and the supply of machines and other goods to farmers.

In the Austrian Empire and the Kingdom of Hungary statistics gathered in 1883 show a total of 1,872 societies. Eight years later when a convention was held in Prague it was estimated that considerable progress had been made but no statistics were available, there being no central bureau for the gathering of information of any kind.

In France it is probable that in the case of co-operative societies, as in the case of other institutions, the Government keeps complete statistics from year to year, but up to the present time I have not been able to get any satisfactory statement. The farmers of France, however, supply themselves very extensively through co-operative societies with their agricultural implements and other articles required on the farm, and to such an extent is this the case that the large American implement companies find it necessary there to set aside their ordinary methods of doing business and place goods to a considerable extent through the farmers' organizations.

"The Syndicats Agricoles," says M. Fougerouse in an article in Le Co-oper-

ateur Francais, in January, 1888, "formed originally to obtain for their members the articles necessary for their business, such as manures, implements, &c., show in their development one of the most surprising social facts ever witnessed in France or elsewhere. They date from the law of March, 1884, which permitted such bodies to be formed, and already they number seven hundred. They have done what they professed in securing to their members the increase and amelioration of their produce by buying cheaply and under protection against fraud what constitutes the elements of good agricultural produce."

In Italy the co-operative movement is making remarkable progress. Until within the last few years it had to meet with the determined opposition of the Government, who feared its political power. In Turin there is a society which owns seventeen general stores and two chemist stores, and in other parts of the country the movement is gaining a firm foothold.

CO-OPERATION IN DENMARK.

In no other part of the world has co-operation among the agricultural classes reached so complete a development as in the Kingdom of Denmark. The total population of Denmark is about 2,000,000, the adult male population is estimated at 580,000. There are 900 co-operative stores with a membership of about 140,000, and annual sales amounting to $7,000,000.

In addition to these stores there are 1,057 co-operative dairies with a membership about equal to the store membership. The extent of the co-operative dairying societies may be imagined when it is stated that over eight-tenths of all the cattle in Denmark are owned by the co-operative societies. It was estimated last October that in the whole country there was about one million cattle of which the co-operative dairying societies owned 850,000. The co-operative dairies in Denmark did not come into existence until 1882, and it will therefore be readily seen that their growth has been simply marvellous. In the year 1901 the co-operative dairies of Denmark sent to England 162,140,000 pounds of butter, or 12.2 per cent. of all the butter imported by England, and so great an effect has the co-operative movement had upon the quality of dairy products that the butter sent to England from Denmark brought an average of 1¾ pence per pound higher price than other butter sold in England. At the last World's Fair held in Paris, the first prize for dairy products was taken by Denmark, notwithstanding the fact that the butter sent from that country had been made several days before the date set for the judging, while it had to compete with fresh butter brought in by French peasants immediately before the test.

So marvellous had been the success of other co-operative enterprises that in 1888 the Danes set to work to establish co-operative slaughter houses. Their growth may be gauged by the fact that in 1888 the one co-operative slaughter house then existing did a business valued at about $250,000, while in 1901 their annual business had reached a total of nearly $10,000,000.

Another co-operative society in Denmark is the Danish Co-operative Egg Export Company, which last year sent to England alone nearly a million dollars worth of eggs.

The total membership of the co-operative societies of Denmark is estimated at 400,000, or within 180,000 of the total male adult population of the kingdom. Their total sales amount annually to nearly $50,000,000.

CO-OPERATION IN BELGIUM.

The growth of the co-operative movement in Belgium during the last twenty years has been very rapid. Two great trading concerns, the "Vooruit" of Ghent, and the "Maison du Peuple" of Brussels, had their beginning with a few hundred francs and in a cellar. To-day, less than twenty years after, these two co-operatives each possess real estate to the amount of more than $300,000. So poor were the people who started them that the membership fee of ten francs (1.93) was paid during a term of years, the candidates for membership not being able to pay it all down. It seems incredible that from such small beginnings such great enterprises should be built up but the dominant factor in co-operation is not the capital contributed by the members but their purchases.

On the 1st of January, 1901, there were in Belgium more than 1,800 co-operative societies of all classes. Unfortunately there are no complete statistics for these societies, but Mr. Louis Bertrand, who represents Brussels in the Belgian Chamber of Deputies, in a magazine article written in 1901, estimated their membership at 200,000, which on a basis of five persons to a family would represent a total of a million consumers or more than a seventh of the population of the country.

The same writer, speaking of the co-operative movement in his own country, says: "To-day the movement is indestructible; it has roots too deep for any crisis to overturn them. It makes an integral part of our national life, it has entered into our customs and nothing henceforth can arrest its forward march."

The widespread character of the co-operative movement in Belgium is shown by the divergent channels into which its energies are directed. Of the new societies founded during the three years ending with 1900 there were 116 savings and loan societies, 210 creameries, 191 trading societies, 65 breweries and distilleries, 48 manufactories, 31 insurance societies and 45 miscellaneous organizations. A. J.

CATALOGUES, BOOKLETS, ETC.

For the convenience of its readers HARDWARE AND METAL has opened its columns for the review of catalogues, booklets or other such publications issued by manufacturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. It is requested that when any of the trade write for any booklet mentioned in these columns that they credit HARDWARE AND METAL as the source of their information.

Light Locomotives.

We are in receipt of the handsome catalogue lately issued by the Baldwin Locomotive Works, Philadelphia, Pa., illustrating various types of locomotives of both broad and narrow gauges, adapted to logging, plantation, contractors and every variety of industrial service. The catalogue presents an attractive appearance, the binding and the paper being of good quality. Each style of locomotive is illustrated and technically described in tables. Users of locomotives should not fail to procure one of these catalogues.

Phoenix Engine.

The Phoenix Iron Works Co., Meadville, Pa., have issued an attractive catalogue describing and illustrating in detail the Phoenix Engine. In their introduction the firm claim that this engine is the latest and highest development of that particular class of engine which has so largely contributed to the successful development of electrical power transmission. The firm during the last 16 years have devoted their

WIRE NAILS
TACKS
WIRE
Prompt Shipment
The ONTARIO TACK CO.
Limited
HAMILTON, ONT.

energies entirely to this class of engines, and so have had the chance to design and build them to advantage. It might be to the advantage of buyers to send for this catalogue.

Pumping Machinery.

The Knowles Steam Pump Works, New York, have issued catalogue K—104, describing and illustrating various styles of pumping machinery for beet sugar factories. If buyers should be undecided as to the class of pump best adapted to the conditions under which it will have to be operated in their factory, the company will be pleased to confer with them concerning the problem, and will advance the apparatus best suited to their requirements. We have also received from this firm a special catalogue of their air pumps and condensing apparatus for stationary and marine engines.

Wheeler & Bain, Toronto.

Wheeler & Bain, Toronto, are manufacturers of galvanized iron eavetroughs, conductor pipes, corrugated roofing and siding, cornices, skylights, ventilators, ventilation pipes, solder, etc., as well as of "Success" hot air furnaces. This firm have been making their furnaces and several other lines for many years and have attained such a wide recognition for the real merit of their productions that they have determined to cover the trade in a larger way than ever before. Their 1904 catalogue gives full information, with illustrations, of the lines they are handling, so any of the trade interested in these lines are invited to write for this catalogue.

Ice Tools.

Wm. T. Wood & Co., Arlington, Mass., manufacturers of high grade ice tools, have issued a catalogue containing full information re their Summer ice tools, including hand plows, Summer bars, chisels, hand and hoisting tongs, axes, saws, ice breakers, scales, skids, etc. The eminence of this firm in their line makes this catalogue one that all hardwaremen should secure.

Fuse and Service Boxes.

The Canadian General Electric Co., 14 King street, Toronto, have issued a small folder describing their "Noark" fuse and service boxes for Sach's "Noark" fuses, also giving details of their branch block, which is a new departure. It is a compact device which at the same time is easily manipulated and installed by placing main wires in grooves in the porcelain base arranged between the terminals of the branch fuses. Cross connection between fuse contacts or terminals is prevented by porcelain separating partitions forming an integral part of the base and projecting above the highest point on the metallic contacts, so that each line is entirely isolated and insulated from accidental cross connection. Further information regarding these goods will be supplied on demand.

A Profit-Paying Paint Specialty

THE SHERWIN-WILLIAMS ALUMINUM PAINT

FOR A BRIGHT SILVER FINISH ON PIPES, BOILERS, RADIATORS, ETC., OR ANY IRON OR WOOD SURFACE

is one of the most adaptable paints on the market. The many ways in which it can be used, its durability, freedom from disagreeable odors, and soft, velvety finish, make it one of the best selling and most satisfactory money-making paint specialties on the market.

Aluminum Paint ranks among the best selling and best advertised of The Sherwin-Williams Full Line of Profit Paying Paint Specialties. It is moderate priced and put up in penny lever cans, sizes from ¼ pint to gallon.

Spring is excellent time to put in a stock of Aluminum Paint.

Peerless Iceland Freezers.

Dana & Co., Cleveland, O., manufacturers of "Peerless Iceland Freezers," have issued a catalogue giving illustrations of their freezers for 1904, with sectional views showing the working parts. In their introduction the advantages of the "Peerless Iceland" are summed up as follows: Simplify machinery and you have lessened the chances of its getting out of order, particularly where so little care is taken of the machine as is usually the case with an ice cream freezer. The Peerless Iceland Freezer has the fewest parts and only one motion—all that is necessary for the effective freezing of smooth, delicious ice cream in three minutes. This is how it is done. Consider the can, the dasher and the crank. Turn the crank and the can revolves around the stationary dasher. That is all there is to it. It is the simplest freezer made. The reason this simple process turns out such smooth, delicious ice cream in three minutes and under, is accounted for by the peculiar construction of the dasher and the way it handles the cream which is set in motion by the constantly revolving can. Write for these catalogues.

Business Changes

ONTARIO.

B. MUNDELL, planing miller and builder, Erin, has advertised his business for sale.

D. E. Frisken, carriage maker, Napanee, has sold out.

C. J. Lancefield, carriage trimmer, Hamilton, is dead.

C. McEachern, hardware dealer, Stayner, has sold out to A. Watson.

J. Bowman, general merchant, Rossport, has sold out to J. P. Healy.

J. McPhee, brick manufacturer, West Lorne, has sold out to McMillan Bros.

H. A. Webber, hardware merchant, Hamilton, has sold out to G. Farwel.

C. W. Conn, hardware and stove merchant, Tillsonburg, has been burned out.

C. S. Rollins, general merchant, Coe Hill Mines, has sold out to Gunter Bros.

J. T. Robinson, general merchant, Bobcaygeon, has assigned to W. C. Moore.

The premises of W. A. Day, general merchant, Port Stanley, have been damaged by fire.

The property of the O'Neil Supply Co., general merchants, Elora, has been placed in charge of the sheriff.

QUEBEC.

R. Lee, foundry, Quebec, is dead.

A. J. Kelly, hardware merchant, Hull, has sold out.

D. Jalbert, general merchant, St. Jerome, is dead.

Small & Blais, general merchants, Ste. Agathe, have registered.

A. H. Hubert, sash and door factory, Marieville, has sold out.

G. F. Foss, machinist, Sherbrooke, is offering his business for sale.

The assets of the Montreal Silicate Brick Co., Montreal, have been sold.

Guertin & Cie., wire fence manufacturers, St. Charles, have dissolved.

Guerin & Frere, machinists, St. Hyacinthe, have dissolved partnership.

The assets of H. Pepin, general merchant, Stanfold, were sold on April 12.

The assets of J. Parent & Co., general merchants, Rimouski, have been sold.

Larue & Clotier, dealers in grocers' sundries, etc., Montreal, have registered.

The assets of N. Rivard, general merchant, St. Paschal, were sold on April 9th.

The assets of L. S. Plamondon, general merchant, South Durham, have been sold.

V. E. Paradis has been appointed curator to F. Galipeau, general merchant, Weedon.

MACHINERY

THE MACHINERY MARKET.

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, April 15, 1904.

THE local machinery market continues to show a considerable improvement and the round of the machinery houses finds their managers in more optimistic mood than on any previous occasion this year. It is not that the volume of actual business is so very large—in a more prosperous year the week's machinery business would not attract much attention—but the improvement noted for several weeks back has continued and seems likely to continue. Everything seems to point to a renewal of confidence in the stability of the Canadian machinery market. Canadian machinery manufacturers never really lost confidence in the stability of the local market and a few months ago when there was most talk of Canada being made the dumping ground for slaughtered American machinery there was very little disposition among Canadian makers to shade prices. Of course it was done in a few instances, but upon the whole the general range of prices was firmly maintained. The result has justified this action for buyers are now pretty well convinced that no important concessions are to be made and they are now commencing to place their orders in a hurry.

There has been a continued activity in engines and boilers. A large boiler was shipped this week to a butter tub manufacturer in Foster, Province Quebec. An engine of 125 horse power was sold in Maisonneuve. Several sales, important in the aggregate, were made in the City of Montreal to manufacturing concerns. A complete saw mill outfit was sold early in the week to J. H. Raney, Arthabaska, Province Quebec.

The contents of the machine shop of Le Sleeper Engine Company, Montreal, now in liquidation, are to be sold by auction on April 22nd. This is an important sale and it is engaging the attention of a number of machinery buyers.

In machine tools, there is nothing of particular importance to note. There is very little activity and prospects are not very bright at present for any large sales. There are no very large buyers on the market at present.

Ontario.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, April 15, 1904.

THE machinery supply houses have not yet overcome the effects of the backwardness of Spring and the great difficulties of transportation.

The transportation trouble is still interfering greatly with business. One machinery firm sold in March a carload of saw-milling machinery to a firm in the Muskoka district slightly more than 200 miles from Toronto on the Grand Trunk. The buyer was so anxious to secure immediate delivery that he helped load the car and then went to the railway officials and explained that if the machinery was not to hand before the roads "broke up" he would be unable to get them in for the Summer's cutting. The railway officials were polite, even kind. The buyer thereupon went home and waited. His goods came to hand in three weeks—after the roads had become impassable. Consequently he will not be able to put them in his mill this Summer. This case is but one of many showing the difficulties made for the machinery supply houses by the railways.

The bad roads are still interfering with business, making travelling as well as delivery of goods difficult and uncomfortable.

There is, however, a steady improvement in the situation. The number of buyers in the market is considerably larger and their purchases have been eminently satisfactory. Iron-working machinery, particularly lathes, drills and planers, have been in good request, while power equipment, from boilers and engines to transmission supplies have all sold more freely than formerly. For electrical goods the demand has been moderately active.

Locomotives From Kingston.

The Canadian Locomotive Co., Kingston, Ont., have just completed an order for 20 simple consolidated locomotives for the Intercolonial Railway. These locomotives are the largest freight type on the system, their dimensions being as follows: Weight, in working order, 164,000 lbs., and on driving wheels, 147,000 lbs.; coal capacity of tender, 7 tons; cylinders, 20x28 in.; driving wheels, 56 in. in diameter; total wheel base of the engine, 23 ft. 6 in., and the the driving wheel base 15 ft. 3 in; total heating surface 2095.7 sq. ft., and fire grate area 32½ sq. ft. These engines are up-to-date in every particular, being equipped with Hancock inspirators, sight feed, lubricators and automatic bell ringers, and all other modern improvements.

In addition to the 20 locomotives just completed for the I. C. R., the Canadian Locomotive Co. have finished 2 engines intended for the Algoma Central Railway, but as the I. C. R. was much in need of motive power the Algoma Railway passed over their claim to them and they are being supplied to the I. C. R. One of these is a freight similar to the 20 others, and the other is a ten wheel passenger locomotive similar to the new engines turned out of the Moncton shop.

Frothingham & Workman.

READERS of Hardware and Metal will be interested to know that the old wholesale hardware firm of Frothingham & Workman, Montreal, have been incorporated with a capital of $550,000. The business will be carried on as before, the only change being in the method of organization. The present owners are the stock holders of the new company.

Frothingham & Workman are one of the oldest business houses in Canada. The business was founded in 1809 by James Frothingham, and about a generation later he was joined by Mr. Workman, the firm name then becoming Frothingham & Workman. The firm have in their possession now old invoices dated 1809.

Frothingham & Workman are well known to the Canadian hardware trade and wherever they are known they are most highly respected. Every hardware man has a good word for them as their honorable business methods have won them the respect of all with whom they have had business dealings. Hardware and Metal wishes the firm under its change of organization every possible success.

THE FAIRBANKS COMPANY

MONTREAL. TORONTO. WINNIPEG. VANCOUVER.

MACHINERY AND ELECTRICAL NOTES.

FOR some time the Southern Pacific Railway have been converting the locomotives in use on their roads from coal burners into oil burners. During the past year nearly 300 locomotives which had burned coal were changed in the company's shops at Reno and Bakersfield, Neb., into modern oil-burning engines and were equipped with the necessary tanks. The company has just placed an order for some new locomotives, and they will be oil-burners.

L. G. Boyer, late with the Canada Foundry, Toronto, has leased a foundry in Markham, Ont.

W. J. Haire, of the United States Machinery Co., Montreal, died suddenly in that city last week.

H. W. Petrie is putting the finishing touches to a new plant for the Georgetown Electric Co., Georgetown, Ont.

The Petrie Mfg. Co., whose premises in Guelph were destroyed by fire, are looking for a suitable site in other towns.

The Knechtel Furniture Co., Hanover, Ont., have bought from H. W. Petrie a 300 horse-power "Erie" water tube boiler.

The Kilgour Mfg. Co., Hamilton, Ont., are installing through H. W. Petrie a thoroughly modern box-making plant.

A strike of the machinists of Carrier, Laine & Co., Levis, Que., is brewing on account of the discharge of some of their number.

The R. Bell Engine and Thresher Co., Seaforth, Ont., have bought an improved Cincinnati milling machine from H. W. Petrie.

The Gutta Percha Rubber Co., Toronto, are making extensions and have purchased a 24-inch Cincinnati shape and a heavy lathe to that end.

The Marble Swift Automobile Co., Woodstock, Ont., are enlarging their plant and have purchased through H. W. Petrie an equipment of modern machine tools.

James & Reid, hardware dealers, machinists, etc., Perth, Ont., are extending their machine shop and have installed a 6-spindle multiple drill, secured from H. W. Petrie, Toronto.

The Frost Wire Fence Co., who located in Welland, Ont., about four years ago, propose to build in Hamilton works considerably larger than those they are in at present. They expect to start building a 150x50 feet factory at once.

A company known as the Du Lievre and Ottawa Railway Co., is seeking a charter from the Dominion Government. The company propose to build a line of electric and steam railway from Ottawa and Hull down to Buckingham and thence up the Lievre River.

The Northwest Machinery and Iron Co. are starting the erection of a 70x30 feet warehouse adjacent to Louise bridge.

F. H. Hayhurst, who is retiring from the Galt Edge Tool Works, was presented with a gold-mounted cane by the employes of the firm, on the occasion of his departure from the firm.

In consequence of the breaking down of the dam of the Orillia municipal electric light and power plant at Ragged Rapids on the Severn River, the town is at present without electric light or power. The damage is in the vicinity of $10,000, and will take two or three months to repair. In the meanwhile the town will be supplied with light by fitting up the old steam plant.

The Goldie & CcCulloch Co., Limited, Galt, Ont., have decided to erect large new boiler shops at Hunter's Corners, Preston road. Building will commence at once. The shops will be over 300 feet long, will be built of structural steel and will be equipped with the most modern machinery in the world ior boiler manufacture. Their growing trade necessitates the erection of this new building.

The Auto Road, capitalization $95,000, are seeking incorporation from the New Brunswick Provincial Government. The objects of the company are to maintain in a line of automobiles or trackless trolleys from St. John to Hampton along the Kennebeccasis, and also from St. John to Gagetown by the west bank of the river. The company also ask for expropriation powers. The headquarters of the company is to be at Rothesay.

The employes of the Montreal Light, Heat and Power Co. held their third annual dinner on Saturday. Amongst those present were the various chiefs of departments, including Messrs. Wickham, S. Skinner, "Bert" Wilson, J. H. Robertson, W. P. Baird, K. B. Thornton, J. A. Beaudin, H. Fauteux. A pleasing incident of the evening was the presentation of gold signet rings to the members of the company's hockey team.

Charles Baillie, curator of Wm. Clendinneng & Son, foundrymen, Ste. Cunegonde, Que., offers for sale by tender until April 15 the assets of that firm, including stoves, finished and unfinished; repair parts of stoves, foundry plant and supplies, boiler and engine, machinery, furniture and fixtures, etc., contained in the premises, No. 119 Vinet street, Ste. Cunegonde, amounting to about $15,000; stock of patterns, $15,000, and book debts, $2,000. Also stock of stoves, stove repairs and house furnishing goods, contained in the store, corner of St. Peter and Craig streets, about $2,500.

The dam, flume and power house of the electrical works at St. Cesaire, N.B., owned by L. Mollem & Poulin, of St. John, have been washed away by the flooding of the Yamaska River. The machinery for the most part remains tact, but the loss exclusive of machinery is between $15,000 and $20,000. Owing to the high water in the river the works cannot be restored before midsummer, and it is doubtful whether another attempt will be made to renew the dam at this point. If the enterprise is entirely abandoned, the loss will probably run up to $50,000 or $60,000.

The Crocker-Wheeler Co., manufacturers of electric generators and motors, Ampere Station, N.J., are working up a plan of life insurance for the men in their employ. The company will assume the expense of the insurance and make the families of the insured the sole beneficiaries. Men who have been three years in the employ of the concern will receive policies for $500, the premiums for which will be paid by the company. It will be provided that the policy may be cancelled by the company for cause, such as violation of the regulations, resulting in the discharge of an employe, or if the employe goes on strike.

A. E. Welch, managing director of the Southwestern Traction Co., has returned from England, where he has made arrangements with an English syndicate for floating the bonds of the Southwestern Traction Co., and so the construction of the railway is assured. The company is to operate from Hamilton west to Strathroy and Glencoe, taking in its course Brantford, Woodstock, Ingersoll, London, Delaware and Melbourne, and south from London to St. Thomas and Porth Stanley, and east from St. Thomas to Aylmer. Under the terms of the arrangement the road is to be built south to Port Stanley and west to Delaware the first year and to be continued from year to year in blocks

of not less than thirty miles, until completed.

The annual meeting of the shareholders of the Henderson Roller Bearings Manufacturing Co., Limited, Toronto, was held in Toronto recently. The election of directors resulted as follows: Albert Ogden, Toronto; W. Vandusen, Toronto Junction; H. Waddell, Peterboro'; John L. Gibb, St. Catharines; A. D. Watson, Toronto; A. E. Henderson, Toronto; John J. Main, Toronto; John C. Eaton, Toronto; R. I. Henderson, Toronto; John Ferguson, Toronto; Senator Merner, Berlin; P. H. McKenzie, Lucknow. At a board meeting, immediately following the shareholders' meeting, the following officers were elected: President, Albert Ogden; Vice-President, A. D. Watson; Secretary-Treasurer, A. E. Henderson; Manager, R. I. Henderson.

Tenders are being called by the Counties' Clerk, Cobourg, Ont., for the construction of the superstructure of a bridge across the River Trent at Campbellford. The superstructure to be of the low truss type, with five spans (the full length of bridge being about 400 feet), the roadway to be 18 feet wide in the clear, to carry a live load of 100 lbs. to the square foot, on a factor of safety, steel joists and expanded metal, concrete floor six inches thick at centre and four and one-half at the outer sides of roadway, with a sidewalk on each side five feet wide in the clear, complete with same style of floor as the bridge, but to carry a load of 80 lbs. to the square foot on a factor of safety, and to be four and one-half inches thick.

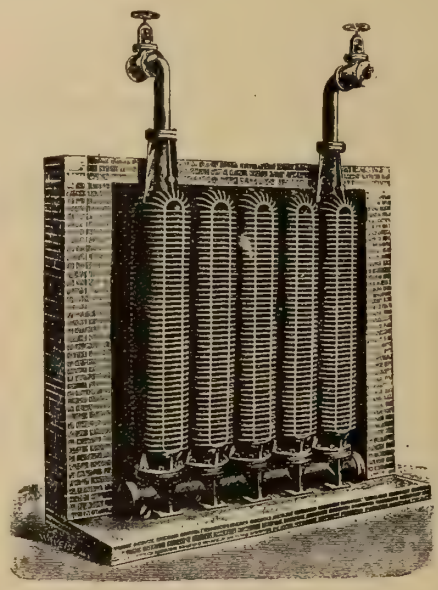
A Hockey Dinner.

THE winning of the championship of the Iron and Steel Hockey League of Montreal was duly celebrated by the Thos. Robertson & Co. hockey team at their annual dinner held at La Corena Hotel on Saturday, April 9th. The members and their guests discussed a sumptuous menu, after which an enjoyable evening was spent in sentiment and song. The guests of the evening were: L. Hartel, representing Drummond, McCall & Co.; W. F. Walsh, representing Williams & Wilson; and A. R. Wallance, representing "the old boys." S. R. Brewer, the capable and popular president of the team, acted as chairman and was ably assisted by the vice-president, John Letham. The following gentlemen contributed to the evening's enjoyment with speech or song: J. Letham, G. R. Muirhead, W. H. Tait, J. F. Lawrence, S. R. Brewer, C. Cornellier, and W. F. Walsh. T. V. Grant presided at the piano.

POSSIBILITIES OF SUPERHEATED STEAM.

(Continued from last issue)

The superheater consists of a number of large straight cast iron pipes connected by flanged return bends, the flanges being so arranged that they cannot be reached by the hot gases; the pipes are provided with a large number of external ribs to increase the heating surface. This type of superheater was designed and built by Schwoerer. It has been found that the cast iron type suffers less from the action of the steam because of the material it is constructed of and because of the thickness of the walls of the piping. However, the heating surface of the steel superheater is much more effective because the saturated steam is distributed to a large number of pipes, the walls of which are



quite thin compared with those of the cast iron pipes.

Now what effect has the superheated steam on the cylinder? There is now of course no difficulty with the lubrication since the introduction of the heavy lubricating cylinder oils. However, difficulty has been found with the expansion of the different parts of the cylinder, and the consequent leaking of the stuffing box and cracking of the cylinder. This difficulty also presented itself in the gas engine cylinder, but by the proper designing of the cylinder this was overcome. Such has been the case with the superheated steam cylinder. It can be readily seen therefore that before superheated steam, of a temperature to produce the most economic results, can be used, the ordinary saturated steam engine will have to undergo a number of changes in detail design. One advance in this direction is the designing of the Corliss valves so that they are adapted for the use of superheated steam.

There are nothing like figures to show the value of anything. "Figures cannot lie!" Already a summary of the results of tests made by Professor Schroeter of the Schmidt engine and boiler in 1895 has been given. At the last meeting of the American Society of Mechanical Engineers, Prof. D. S. Jacobus read an interesting paper on several tests which were made on a Rice & Sargent horizontal, cross-compound, condensing type of engine, especially adapted for the use of highly superheated steam. It was located at the Millbourne mills in Philadelphia. A Schmidt superheater was used for superheating the steam. The high pressure cylinder of the engine was furnished with double beat poppet valves, and the low pressure with corliss valves. The inlet and exhaust valves of each cylinder were operated by separate eccentricities. The inlet valves were closed by vacuum dash pots, and the exhaust by a positive motion. A portion of the highly superheated steam furnished to the engine passed through a coil in the receiver between the high and the low pressure cylinders. There was a lug-pass valve operated by the governor which regulated the amount of steam passing through the coil, a greater amount being made to pass through when the engine was heavily loaded than when lightly loaded. The bore of the cylinders, when measured hot were 16.07 and 28.03 inches; the length of stroke was 42 inches; and the diameter of piston rods were 3 and 3.5 inches.

The results of the tests may be summed up as follows: The water consumption per hour per indicated horse-power was 9.76 pounds at 474.8 horse-power, 9.56 pounds at 420.4 horse-power, and 9.70 pounds at 276.8 horse-power; the pressure of the steam at the engine throttle was slightly over 140 pounds per square inch, and the superheating from about 350 degrees to 400 degrees F., the heat consumption per minute per indicated horse-power, according to the standard recommended by the civil engineers of Great Britain, where the engine is charged with the heat in the

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

Craig Mine Corundum.

CRYSTAL REGISTERED TRADE MARK CORUNDUM

Corundum is the best abrasive obtainable. It cuts clean, fast and cold. Not until three years ago when Craig Mine Corundum was placed on the market, could corundum be obtained in quantity. We can now supply any quantity of uniformly pure and carefully sized corundum, and enquiries and orders will receive prompt and careful attention.

Send for our booklet.

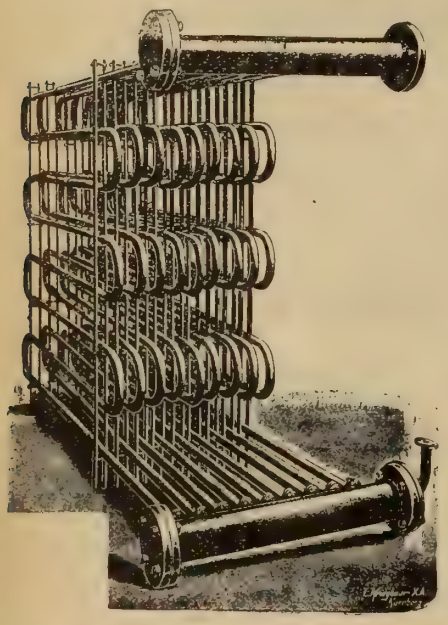
The Canada Corundum Company, Limited

TORONTO, CANADA.

steam at the throttle valve and is credited with returning the feed water to the boiler at the maximum possible temperature that could be obtained by feed water in the exhaust pipe, was 205 British thermal units at 420.4 horse-power and 208.8 units at 276.8 horse-power, and the vacuum measure near the engine ranged from about 25 to 26 inches of mercury.

The coal consumption obtained directly from the heat consumption was 1.265 pounds per hour per indicated horse-power at 475.5 horse-power, 1.257 pounds at 420.4 horse-power, and 1.288 pounds at 276.8 horse-power.

The engine was also tested with saturated steam, but a close comparison of the results with those of the superheated steam would be scarcely fair for the reason that the engine was specially constructed for the use of superheated



steam. In the tests the water consumption was found to be 13.84 pounds per hour per indicated horse-power at 406.7 horse-power, and that the heat consumption was 248.2 British thermal units per minute per indicated horse-power. The vacuum was very poor, being only 24.5 inches of mercury. The coal consumption was 1.497 pounds per hour per indicated horse-power at 406.7 horse-power.

However, Prof. Jacobus made a separate test of an engine of the same general type, but built for saturated steam. This engine was of about twice the power. In this test the most economical heat consumption was 222.7 British thermal units per minute per indicated horse-power. The vacuum in this case was very high, being 28 inches. If the vacuum had been about 26 inches as it was in the test with superheated steam, the heat consumption would have been about 230 British thermal units per minute per indicated horse-power, and the coal consumption would have been 1.42 pounds per hour per horse-power. Comparing the coal consumption in this case with that in the tests of the superheated steam, the minimum consumption in which was 1.257 pounds per hour per horse-power, there is a gain in using superheated steam of .163 pounds of coal per hour per horse-power. This shows that the larger engine using saturated steam was about 13 per cent. less economical than the smaller one using superheated steam.

COMMERCIAL KOREA.

An interesting monograph has been issued by the Department of Commerce and Labor of the United States, discussing commercial conditions in Korea and including a statement of Korean imports and the countries from which they are drawn as well as of the exports and the countries to which they are sent.

The population of Korea is estimated at about 15,000,000 and the foreign commerce at $12,000,000, of which imports form about seven and a half millions.

Commercially the development of Korea begins with 1876, when two ports, Gensan and Fusan, were, upon the insistence of Japan, opened to trade with that country only. In 1882 Admiral Shufeldt, of the United States navy, visited Korea and secured a treaty of friendship between the United States and Korea by which American vessels were given access to its treaty ports and the safety of American vessels and citizens assured. This was followed by treaties with Germany and Great Britain in 1883, Rusria and Italy in 1884, France in 1886, Austria in 1892, and China in 1897.

From 1882 on Korea was opened to foreign trade and Western civilization, and the Korean Government established its legations among the various great commercial nations. With the opening of the treaty ports and the establishment of commerce an official record of Korean imports and exports began. This shows imports in 1884 amounting to about $800,000, and exports amounting to $475,000. By 1890 imports had grown to $3,850,000 and exports to $2,975,000 In 1894 imports and exports fell considerably below those of 1890, but in 1897 again increased, being for that year of imports about $5,000,000 and exports about $4,500,000. In 1902 the imports at the treaty ports amounted to about $7,000,000, and the exports of merchandise to about $4,200,000. In addition to this, exports of gold amounted to over $2,000,000, while the imports and exports at other than treaty ports are estimated as being sufficient to bring the total commerce of 1902 up to fully $15,000,000, exclusive of gold exports, which, as above indicated, amounted to about $2,000,000.

The most important articles in the export trade are rice, which shows an annual exportation of more than a million dollars; beans, a half million; ginseng, nearly a half million; and hides, about one hundred thousand dollars in value in the latest available year. Of the importations, cotton goods form the largest item, from three to three and a half million dollars per annum; silk piece goods imported from Japan and China amount to $600,000 per annum; kerosene oil, about $300,000; railway materials, about $250,000; mining supplies, about $200,000; and bags and ropes for packing, $150,000

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

AGENCY WANTED.

AN established Manufacturers' Agent in Montreal representing several large American houses, with representatives covering all Canadian territory, wishes to secure a good Canadian manufacturer's line in Hardware or Specialties. Address Box 102, HARDWARE AND METAL, Montreal. (20)

A PARTY at present acting as assistant manager for an old-established English hardware importing house, would like to obtain agencies for English, Canadian and American firms. Address "Agent," c/o. The H. R. Ives Co., Limited, Montreal. (18)

BUSINESS FOR SALE.

HARDWARE BUSINESS—About $4,000, in largest mining town in New Ontario. For particulars address Horne & Hardy, Copper Cliff. (24)

SITUATION VACANT.

WANTED — First-class hardware and stove salesman with two or three years' experience. Apply, with reference, and state salary, to Boxall & Matthie, Lindsay, Ont. (18)

SITUATION WANTED.

AS HARDWARE CLERK—By young man of good character, with experience; references. Address Box 116, HARDWARE AND METAL, Montreal, Que.

FOR SALE.

TWO HARDWARE STOCKS in Manitoba; important implement agencies in connection; reason for selling, attention required to other lines; both good opportunities for money making; one stock will invoice about $5,500, other $2,500; good trade established and will bear investigation; write now. Marshall-Wells Company, Wholesale Hardware, Winnipeg, Man. (19)

The Sun is Shining on Your Windows.

Get an awning.

Send us measurements and we shall send quotations.

We also make tents, rent them, or sell them, as desired.

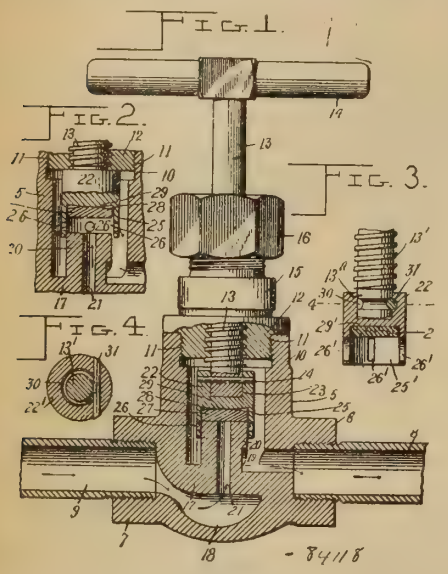
Patents Granted in Canada.

An authoritative report of patents granted by the Canadian Patent Office for recipes and devices of interest to HARDWARE AND METAL readers.

Hydraulic Valve.

GRANTED Peter Hall Cowper, Montreal. Claims: 1. A valve comprising a casing having a partition interiorly thereof, dividing it into inner and outer chambers, a cylindrical tubular nipple rising from said partition, a valve box having a cylindrical recess



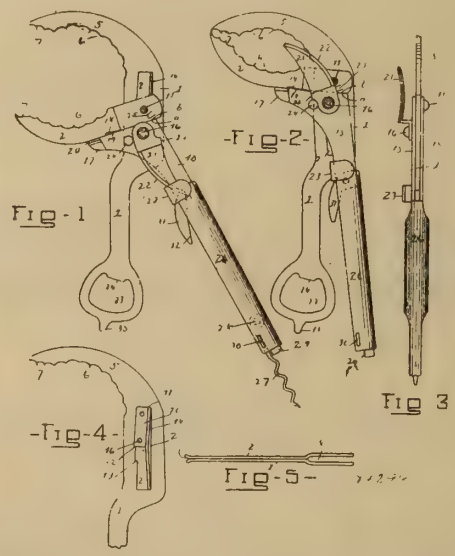
in the lower side adapted to telescope over said nipple, the bottom of said recess being formed convex, and said nipple having a planed upper surface perpendicular to the tube thereof, and a valve disc carried in said recess and having a planed lower surface adapted to be seated on the planed upper surface of the nipple and to be pressed thereon by said convex interior surface of the valve box.

2. A valve comprising a casing having a partition interiorly thereof, dividing it into inner and outer chambers, a tubular nipple rising from said partition and having its upper surface planed perpendicularly to the tube thereof to form a seat, a valve box having a recess in its bottom adapted to telescope over said nipple, a disc having a planed lower surface adapted to fit upon and close said seat, and a convex upper surface against which the bottom of the recess in the valve box is adapted to be pressed to close the valve.

3. A valve comprising a casing having a partition centrally thereof, dividing it into inner and outer chambers, a tubular nipple rising from said partition and having its upper surface planed square to form a seat, a valve box having a recess in its bottom adapted to telescope over said nipple, the bottom of said recess being formed slightly convex, and a valve disc within said recess having a slightly convex upper surface against which the bottom of the recess is pressed and a plane lower surface.

4. A valve comprising a casing having a partition interiorly thereof, a tubular cylindrical nipple rising therefrom, and having its upper surface planed square to form a seat, a valve stem mounted to reciprocate co-axially with said nipple, a valve box carried by the lower end of the stem, and having a recess in its lower side adapted to telescope over said nipple, and a valve disc between said nipple and the box adapted to close the seat of the valve, said disc and the bottom of said recess being formed slightly convex one to the other, whereby to form a single bearing point of the box against the disc, and to permit the disc to sit square upon its seat.

5. A valve comprising a casing having a partition interiorly thereof, a tubular cylindrical nipple rising therefrom, and having its upper surface planed square to form a seat, a valve stem mounted to reciprocate co-axially with said nipple, a valve box carried by the lower end of



the stem, and having a recess in its lower side adapted to telescope over said nipple, and a valve disc between said nipple and box adapted to close the seat of the valve, said disc and the bottom of said recess being formed slightly convex one to the other, whereby to form a single bearing point of the box against the disc and to permit the disc to sit square upon its seat, and the depending sides of the recess being formed with apertures therein to assist the outflow of the fluid.

A Combination Tool.

Granted John M. Clark and John C. Crume, Dayton, O., and George H. Swift, Cincinnati. Claims: 1. In a combination tool, a wrench consisting of adjustable and stationary members, the stationary member having a longitudinal slot therein, a fulcrum block in said slot, an adjustable member pivoted to said fulcrum block and adapted to actuate the adjustable member of the wrench, a can opener mounted on the adjustable member, and a cork screw sharpening device, and screw driver also mounted on said adjustable member, substantially as set forth.

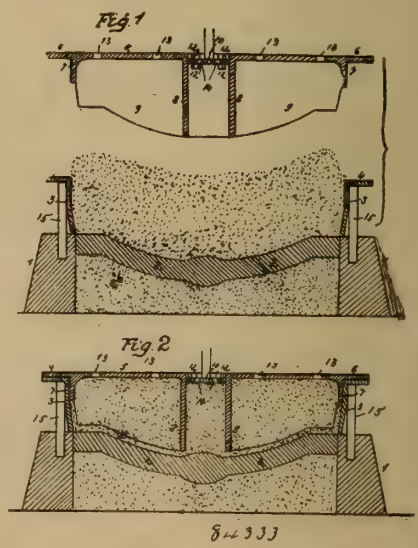
2. A combination tool comprising the following instrumentalities, a wrench consisting of a stationary member and an adjustable member, said members having connecting therewith means for opening metallic cans, means for sharpening or edging knives, means for drawing corks, means for removing sealing strips from cans, means for removing wire fasteners from bottles, means for removing metallic caps from bottles, means for cutting wire, said last-named means consisting of the movable parts of the wrench, and a screw driver, all arranged and associated in one implement, substantially as set forth.

Moulding Flask.

Granted James Mills, Wilmington, Delaware. Claims: 1. A moulding flask cope comprising an outer portion with straight upper part and inwardly inclined lower part, and an inner portion capable of sliding within said straight upper part of the outer portion of the cope, said sliding inner portion having a top plate and traverse ribs below the same, said ribs compressing the sand beneath them and the top plate compressing the sand between the ribs, substantially as specified.

2. A moulding flask cope having a top plate provided with an opening and with depending ribs separated by spaces which extend up to the top plate, said ribs terminating at their inner ends near the centre of the plate and forming a central passage communicating with the opening in the plate, whereby when the top plate is pressed upon the sand in the cope, said ribs will be thrust into the sand and the latter will be compressed by the top plate within the central passage and in the spaces between the ribs, substantially as specified.

3. A moulding flask cope having a top plate with depending ribs separated by spaces which extend up to the top plate,



and a depending tubular portion, whereby, when the top plate is pressed upon the sand in the cope, said ribs and the depending tube will be thrust into the sand and the latter will be compressed by the top plate within the tube and in the spaces between the ribs, substantially as specified.

METALS, THEIR ORIGIN AND NATURE.

By Geo. B. Frank.

No. 1.—Gold, Silver, Mercury.

THE peculiar qualities of metals render them capable of uniting with each other to form a series of bodies, having more or less the properties of their constituents. This quality and the knowledge thereof has been usefully applied from remote antiquity.

It is probably interesting to know that the ancients were acquainted with seven metals, viz.: gold silver, mercury, copper, iron, tin and lead. They knew and employed various compounds of antimony, arsenic and zinc, although we have no evidence that these metals were known to them in the metallic state.

Geo. B. Frank.

RETURNED AUG 14 1906

Mercury for a long time was not considered a metal, but when it was found that when frozen it became hard and malleable its metallic character was admitted.

Gold was regarded by the earlier chemists as the king of metals on account of its indistructability. It is a very heavy metal, its specific gravity being 19.34, and its fusing point about 2012 degrees F.

It is not acted on by moisture or the atmosphere, but is soluble in nitro- hydrochloric acid. It is found native sometimes, in crystalline forms of the isometric system, also in quartz veins, with pyrite, in slate, in metamorphic rocks, and in sand and alluvial soil resulting from the disintegration of such rocks. Geologically it occurs in all formations from the earliest rocks to deposits now forming. The original sources were Asia and Africa. Subsequently the mines in the Ural Mountains were worked. South America and Central America after their discovery became important sources of gold. And since its discovery in California in 1848, and Australia in 1851, these places have been the chief sources. It is interesting to note that gold was worth 13 1-3 times as much as silver in ancient Egypt, 10 times in Greece and Rome before the Christian era, and as low as 7½ times when Caesar returned to Rome.

Its ration of value to silver has been fixed at 15½ to 1 by the Latin Union and 16 to 1 in the United States.

In 1890 the gold product of the world was $116,008,900, of which the United States furnished $32,845,000, Australia $30,126,500, Russia $21,161,700, Africa $9,587,000, China $5,330,000, and other countries smaller amounts. Silver, which is classified as one of the precious metals, ranks next, although now one of the most common. Its specific gravity is about half that of gold, being 10.57. Fusing point 1904 degrees F.

It is a white, ductile metallic element sometimes found native, but more commonly in combination with sulphur, as black sulphide, and also in copper, in fact it is found in all variety of forms.

I may state here that in November, 1859, the news of the discovery of silver mines near Lake Washoe, in Nevada, was confirmed in San Francisco, and created such a furore in Europe that the French Minister of Finance and Commerce despatched a mining engineer to Nevada to made a close inspection of the Washoe mines. It seemed at that time as if the world were about to be innundated with silver, as it was with gold ten years previously.

Since then silver has been discovered in a great many localities, even in the waters of the ocean. In 1892 the world's production was $196,605,184, of which amount the United States, the largest silver producing country, yielded $74,989,900, mostly from argentiferous galena.

This metal is highly soluble in muriatic acid. Mercury (called colloquially quick silver) has the peculiarity of being liquid at ordinary temperatures. It also has the quality of dissolving most metals. Its specific gravity is 13.6, freezing at 39 degrees F., and boiling at 680 degrees F.

The first knowledge we have of this metal is when the Romans worked the mines of Spain prior to the Christian era. Its principal source is from a brilliant red ore called cinnabar.

Mercury is found native in Mexico in very small quantities, where the mines are said to have been discovered by a slave, who in climbing a mountain came to a very steep ascent. To aid him in surmounting this he tried to draw himself up by a bush which grew in a crevice above. The shrub however giving away, was torn up by the roots, and a tiny stream of what seemed silver trickeled down upon him.

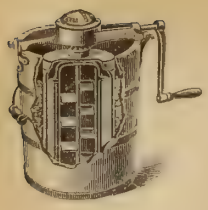
This metal forms an amalgam with gold or silver. Perhaps this is its most singular property. A gold leaf for instance dropped upon mercury disappears like a snow-flake in water. Particles of gold or silver too fine to be seen by the naked eye will be gathered by mercury from a mass of ore. An amusing story is told about an old lady who attended a lecture upon chemistry. The lecturer had occasion to purify some quicksilver by forcing it through chamois skin. The scrap of leather remained upon the table after the lecture and the old lady, thinking it would be very nice to wrap her gold spectacles in, accordingly appropriated it to this purpose. The next morning she came back in great alarm, stating that the gold had mysteriously disappeared, and nothing was left in the parcel but the glasses. Sure enough, it was found upon investigation that the mercury remaining in the pores of the leather had amalgamated with the gold, and entering had destroyed the spectacles. It was a mystery, however, which never could be explained to that old lady's satisfaction.

In ancient times mirrors were made of highly polished silver or steel. As they were very liable to rust, due to moisture in the atmosphere, a piece of sponge, sprinkled with pumice-stone, was suspended from the handle for rubbing the mirror before use. The old Roman philosopher, Seneca, in lamenting over the extravagance of his time, says: "Every young woman now-a-days must have a silver mirror."

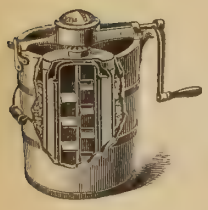
To-day the back of an ordinary looking-glass is made of tin-foil and mercury. The process is quite a complicated one and is attended with considerable danger to the workmen.

WELL THOUGHT OF AT HOME.

The firm of McKenzie & Howell, hardware dealers, has been dissolved, Mr. McKenzie retiring after a long and honorable business career. The business will be carried on by Mr. Howell in the same stand. Mr. Howell has been connected with this well-known business for over 10 years, first as clerk and for the last four years as partner. He is still a young man and combines with a thorough knowledge of his business the energy and push which contribute so greatly to success in commercial life. He possesses the confidence and goodwill of the community, and we are sure will fully maintain the honorable traditions of the firm with which he has been so long identified. Mr. McKenzie, who will take a well-earned rest from business life, is one of our oldest merchants and his name is known and respected throughout this whole district. We take this occasion to wish him many years in the enjoyment of the leisure which he seeks after so many years of activity. Goderich Signal.



"White Mountain" Ice Cream Freezers



Made in eleven sizes with crank, and five sizes with fly-wheel.

These freezers make the finest and smoothest ice-cream the quickest.

Are built with triple motion, duplex malleable iron beater and strong waterproof tub.

Bound with heavy galvanized iron hoops.

The best all-round freezers in the world.

THE ANGLO-FRENCH TREATY.

A GLANCE at the recently published summary of the provisions of the new Anglo-French treaty shows that the negotiations covered a wide field. At the present time the abolition of friction between the two countries is probably the most important result and will doubtless have a beneficial effect in the Province of Quebec where Mr. Bourassa and others have been trying to stir up race prejudices.

The chief interest in the treaty for Canada centres in the clause which affects the sister colony of Newfoundland. Under the old conditions there was a portion of the Newfoundland coast known as the "French shore." Along this shore Newfoundlanders were not permitted to fish, according to an arrangement existing between the British and French Governments. This prohibition was a source of annoyance and sometimes actual loss to the people of Newfoundland. Even a British lobster factory was not permitted on the shore in question.

In 1890 an amusing incident happened in this connection, when the commander of a British war ship compelled a French canning factory to close its doors. A law suit followed. It was carried to the Privy Council and the British Government were condemned to pay damages. Ever since, the British authorities have been endeavoring to relieve the situation.

By the treaty the Newfoundlanders are given the right to carry on whatever industries they please on the French shore, while the Frenchmen are still granted the privilege of fishing off the coast and buying bait from the Newfoundlanders. In addition Canadian fishermen have been given the same fishing and bait rights as the French fishermen.

The other portions of the treaty deal with Morocco, Egypt, Central and West Africa, Siam, Madagascar and Australasia. The friendliness of the arrangement between the two countries, France and Great Britain, and the removal of annoying conditions should be matters for public congratulation.

TRANSPORTATION NEEDS.

POLITICIANS and others are apt to lay too much stress on the tariff as a panacea for all commercial evils. Important as is the tariff, it must not be forgotten that it is merely an artificial contrivance. Of quite as much importance is the improvement of such natural means of development as are afforded, for instance, by better transportation facilities.

Larger and faster steamboats, improved harbors and waterways, better freight service on the railways, accompanied by reduced rates, will do quite as much to advance the commercial interests of the country as a fostering tariff.

The Transportation Commission, which has held sittings in many parts of Canada during the past month, should do much to improve facilities, and to the Railway Commission at Ottawa the eyes of shippers and others are turned for the solution of the problem of rates.

ALASKA vs. YUKON.

TOO much credit cannot be given the Canadian Government for its management of the affairs of the Yukon. It is true that instances of maladministration may be pointed out, but on the whole government in the Klondike has been creditable.

This fact may be emphasized and proved by an examination of the state of affairs across the border in the Territory of Alaska.

Though possessing a population of some 65,000 white men, Alaska has no representation in Congress. This in itself is a serious grievance, when it is remembered that the Yukon Territory of Canada has for some time enjoyed representation in the Dominion Parliament. The judiciary in Alaska is also complained of. There have been too frequent changes on the bench, a circumstance which has not tended to elevate the law. In the Yukon, on the other hand, the same judge has sat on the bench continuously ever since a court was established there.

Then, too, the inhabitants of Alaska look with envious eyes on the constabulary, which maintains peace and order in the Yukon. To the Northwest Mounted Police is due much of the credit for the law-abiding and peaceable nature of that settlement, and the Alaskans feel the lack of a similar body of men in their midst.

Dissatisfaction has also been expressed in Alaska at the methods of the members of the civil service, who act in an arbitrary manner, which does not give the country a good name. Contrasted with them, the Government officials in the Yukon are superior in every respect.

That these grievances of the people of Alaska are not unreal, is evidenced by the various measures which are at present being introduced into Congress to ameliorate the condition of affairs there. We believe, however, that little would be heard of these troubles were it not that the Alaskans had constantly before their eyes the spectacle of a country, similar to their own, yet enjoying greater advantages in the way of good government than they themselves do. In the dissatisfaction of the people of Alaska lies the best proof of the excellence of Canadian institutions.

CANADA'S UNDERPAID JUDICIARY.

FROM time to time, out of as well as in Parliament, public attention is called to the meagre salaries paid in Canada to the judiciary, and the bad results which are the inevitable consequence of such misplaced economy.

Canada has become a great and wealthy nation, her industrial and commercial interests are expanding with exceptional rapidity. So matters litigated in our superior courts are often of great magnitude, involving very large sums of money. It is becoming more and more imperative, in the interest of Canadian industry and commerce, that they should have for their determination the best legal talent our country can produce.

No feature of British institutions has been more universally recognized than the importance of having, as the expounders of the law, those who in their day have been the most brilliant members of the British bar. This fact, more than any other, has induced that profound respect for the law which has always characterized the English nation.

Most of the British self-governing colonies have recognized how important it is that the highest legal excellence should be attracted to the bench, and have followed the English precedent as far as possible by making the salaries commensurate with the importance of the office. Consequently, we find that whereas in England the lord justices have salaries of $25,000, correspondingly adequate salaries have been provided by statute in most British colonies. For example: In Victoria, with a population of 1,200,000, the chief justice receives $17,000, and each of the puisne judges $15,000. In Queensland, with a population of only half a million, the chief justice receives $17,500, and each of the puisne judges $10,000. In Cape Colony, with a European population of 400,000, the salary of the chief justice is $15,000, the puisne judges $10,000. And even in little Tasmania, with a population of only 175,000, the chief justice receives $7,500, and each of the puisne judges $6,000, and most recently of all, in the new Commonwealth of Australia, the salaries of the supreme court judges were, at the last session of Parliament, fixed for the chief justice at $17,500 and the puisne judges $15,000. In Ireland, with a population considerably less than Canada's, the salaries are fixed as follows: Lord chancellor, $40,000; master of the rolls, $20,000; vice-chancellor, $20,000; land judge, $19,500; lord chief justice, $25,000; chief baron, $23,000; eight puisne judges, each $17,500. The lord chancellor may be eliminated as not offering any comparison, but the salaries of the other judges, and especially those of the puisne judges, are fair matters for comparison.

In Canada alone do we find this English precedent not followed, and the judiciary treated with the utmost parsimony. The average salary of our superior court judges is but little above $4,000, and the salary of the chief justice of the supreme court of Canada is only $8,000, and the puisne judges $7,000, a sum little more than that given to the corresponding judges in Tasmania, notwithstanding the fact that we have in Canada a population of nearly six millions, and a wealth per capita higher than many of the leading nations of the world.

When the salaries of the supreme court of Canada were fixed the standard adopted by the then prime minister, Hon. Alexander Mackenzie, and his minister of justice, was the salaries paid to the ministers of the crown. At first sight that looks eminently fair. But when it is remembered that these salaries of ministers were fixed at a time when the cost of living in Ottawa was certainly not two-thirds of what it is to-day, and further that the ministers receive $1,500 a year for sessional allowance in addition to their salaries, and enjoy with their families the privilege of travelling free over all the great railway lines of Canada, it will at once be seen how unfair to the judges the standard taken is. No one contends the ministers are overpaid. On the contrary, the opinion of all those whose opinion is worth anything is that they are under paid. Still they receive a good deal more than $2,000 per year beyond the salaries paid to the judges of the highest appeal court in Canada.

Here is a court, comparing smaller things with greater, ranking in Canada on a par with the supreme court of the United States and the appeal court of Great Britain in those countries, and from which is demanded a comprehensive knowledge of both the civil and the common law, who sit in appeal upon cases from the Yukon to Halifax, who by their judgments settle the judicial foundations on which the future of this great country will be raised up, and we pay them about between one-third and one-half of what men in similar positions in other parts of the empire with equal responsibilities or lesser ones receive.

Heretofore mere politicians have succeeded in defeating every proposition to remedy this wrong. A judge, to them, is a judge and no more, whether sitting in a county court or a superior court, settling disputes between their neighbors or sitting as the highest Canadian court of appeal and determining the meaning of the constitution of the country or matters involving millions in money and property to its Government or its people.

We do not desire to under-rate the importance of the duties discharged by the county or superior court judges. But we do maintain that if a general levelling up of the salaries of the judges cannot at present be attained, there can be no question that the time has arrived when at any rate the supreme court of Canada, the appellate tribunal to which cases are carried from the highest appellate courts of every province, should have paid to its judges salaries in some respects commensurate with the importance of the office, and which will avail to attract the best legal talent of our country.

We desire to express in the strongest terms at our command our view that the first step at any rate should at once be taken to remedy this evil, by a substantial increase being voted by parliament for the salaries of the judges of the supreme court of Canada. And we are convinced that in doing so we are voicing the sentiments of the business men of Canada generally.

The absurd answer which from time to time we find made to this state of affairs, and at the last session of Parliament we regret to say expounded by members on the floor of the House, is that there is no difficulty in getting judges at the present salaries. This is quite true, but the question is not can you get lawyers to fill the judicial positions, as to which there can be no doubt, but the important question is, can you get the best lawyers in Canada to go on the bench with the meagre salaries at present paid to the judiciary? We are convinced to the contrary.

It is indeed lamentable that politicians, merely desirous of the approval of the unthinking, should be permitted to obstruct the carrying out of a national duty by declaring that unless the complicated and difficult question of county court and superior court salaries be considered those of the higher courts must not be touched.

Such a position is unwarrantable, indefensible, and it is to be hoped that the

present House of Commons will have sufficient regard for the industrial and commercial interests of the Dominion to bear down such petty obstructions and to do justice to the judiciary, beginning where the need is most vital by dealing with the appeal courts, where injustice in the shape of inadequate salaries for the responsibilities and duties appertaining to the judges has too long prevailed.

No business man would allow such a relationship between himself and a valued, trusted employe. Why should the Dominion of Canada treat her most trusted and honored servants as no business man would his employe? The remedy is simple. Increase the salaries to an equitable figure.

This important subject is at present receiving more than ordinary attention from the more thoughtful business men of Canada. It is felt by them to be a matter of supreme importance, not only that the services of the best men should be obtained for our appeal courts, but that when secured they should be paid salaries commensurate with the dignity and responsibilities of their position, and which would ensure the devotion of all their time to the study and decision of the cases before them.

It is a matter of public notoriety that in some, at least, of our principal cities this is not so and that the members of the court have found themselves compelled to accept outside positions of emolument, acceptance of which, while perhaps not absolutely inconsistent with their position as judges, at least gives a great shock to the traditions which Canadians have inherited and maintained with respect to the judiciary. For our own part we have no hesitation in saying that a system which not only tolerates but in the cases of those judges who have large families compels a resort to these methods of eking out an insufficient income is an intolerable one.

C. I. F. TERMS.

REOPENING the c. i. f. terms discussion the following belated item from our B. C. representative, which was delayed in transmission, gives Colin F. Jackson's reply to Mr. St. Arnaud in the last February issue of Hardware and Metal. In an interview Mr. Jackson says:

"I am making inquiries through my English agents for details of any cases which have been decided in England regarding c. i. f. terms. I may say, however, that I have been engaged both as seller and buyer of goods on these terms for shipment between various ports of the world for sixteen years. The matter of the legal meaning of the term c. i. f. and the responsibility attaching to shippers, has often engaged my attention.

"I recall the question coming up acutely in connection with a shipment of jute goods from Calcutta to points in the North Pacific. I found that all the large Calcutta houses engaged in this trade were in the habit of selling San Francisco and other points on c. i. f. terms. As I knew salt water damage was not uncommon in this trade, I insisted on goods being insured against all risks. I found, however, that ordinary c. i. f. terms carried no such obligation on the shippers. I was informed by large operators in trade that the courts had decided against purchasers on this point.

"In this instance the goods could be insured all risks, if specially packed in waterproof covering. As a result of my inquiries we paid extra for this insurance, adding a clause to the ordinary c. i. f. contract to cover it.

"This only applies to jute goods, which can be insured against all risks at a reasonable rate. But in spite of Mr. St. Arnaud's statement that such goods as galvanized wire are being insured against all risk every day, I know perfectly well that in practice it cannot be done. My firm in Liverpool, Colin F. Jackson & Co., as intermediaries between my correspondents in the Hawaiian Islands, who are agents for the B. & F. Marine Insurance Co., and in connection with my business here, where we hold the agency of the Union Marine Insurance Co., of Liverpool, have had long experience in contracting large amounts of marine insurance, which they have placed in all parts of the world.

"The question of insuring such goods as galvanized iron, galvanized wire, raw materials for the engine ring trade, cement and all such rough goods against all risks has been constantly before them. But never, in spite of our close touch with the insurance world, have they been able to effect such insurance.

"On seeing the decision of the case of the Canadian Hardware Co., I at once wrote our Liverpool house to ascertain the present position in this matter of terms. They write me as follows:

Re c. i. f.

You will gather how unusual it is to insure anything but dry goods against all risks when we tell you that the Liverpool underwriters REFUSE TO QUOTE.

"The date of that letter is Feb. 3, 1904. In a later communication, dated Feb. 10, 1904, they say:

We have been in communication with London insurance brokers who do a very large business at Lloyds. They say they have not been able to get any quotation.

"Now," continued Mr. Jackson, after reading to your representative the above extracts from his business correspondence, "this, we think, proves that Mr. St. Arnaud is mistaken when he says this insurance is done every day. I refer, of course, to reputable companies and underwriters. There are men who will accept any kind of risk, and the insurer operating through them shares the risk.

"As soon as I can get any definite information regarding precedents," said Mr. Jackson, "I will be pleased to place such proof as I have at the disposal of your readers. But I mad add, that the reason such decisions in a legal court of Great Britain are so rare, is that English merchants have learned by long experience the folly of carrying trade disputes before a judge whose training has been such (as a rule) as to cause him to attach more importance to a legal technicality than to the more important consideration of trade custom and practical justice.

"For a long while past all such disputes as these have as a rule been referred to an arbitration board consisting of merchants familiar with the trade in which the dispute occurs. This method is infinitely quicker and more economical, and it is more just than any results which can be obtained through the ordinary procedure of the courts. I think it would be a great advantage to the commercial community of Canada if this mode of settling disputes were more largely adopted. Here in Vancouver we have to appoint an arbitration board to settle such disputes, comprising twelve members of the council of the board of trade. I have not heard of their ever being called on to act. They certainly did nothing last year, that, too, in the face of the fact that the courts have been overloaded with petty cases which could be settled by such a method."

PERSONAL MENTION.

Vandusen & McDonald, Tara, Ont., writes: "I find Hardware and Metal too useful to do without it."

Mr. J. R. Wells, advertising manager for the Fairbanks Company, Montreal, was in New York early in the week.

Mr. A. Westman, hardware merchant, London, Ont., is confined to his house through an accident, in which he had three ribs broken.

Mr. H. J. Fuller, manager of the Fairbanks Company, Montreal, returned to that city a week ago from a trip to Winnipeg and Vancouver. Mr. Fuller inspected the company's branches in those cities.

Mr. Geo. D. Wood, of the Geo. D. Wood Co., Winnipeg, has been seriously indisposed of late and is now confined to his home with a severe attack of la grippe.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, April 15, 1904.

Hardware.

WHOLESALERS and manufacturers are anxiously waiting for the opening of river and lake navigation as it is very difficult at present to get goods through to various points which in a few weeks can easily be reached by water. The opening of navigation will give a much needed impetus to deliveries of metals and hardware. Since the reduction of freight rates for the Summer—which went into effect on the first of the month—there has been a big increase in shipments of hardware from this city. Wholesalers are still complaining, however, of the difficulty in getting supplies through from American manufacturers. One of the local jobbing houses reports that several cars which were sent from Pittsburg on the 2nd of March have not yet arrived. Vexatious delays of this character have hindered trade to a very considerable extent during the last month.

General conditions in the hardware trade show some improvement however. The jobbing houses are now very busy with their Spring shipments and they report the arrival of large orders every day for Spring and Summer delivery. Business this month has been brisk, but it is not thought that the increased trade will be sufficient to compensate for the slackness of the early part of the season.

Price changes this week are neither numerous nor important. The meeting of the Wholesale Hardware Association last week did not result in any important changes. Values throughout seem fairly steady although the market is probably not so firm as it was a year ago. Agricultural wrenches are sold a little cheaper, the new discount being 25 per cent. off list. Hose reels are selling at higher prices. It is almost impossible to quote these goods as there are many makes and there is no standard price. It is safe to say, however, that the general range of prices has been advanced from 15 to 25 per cent over prices of last year. Cotton goods continue very firm. Mason lines, chalk lines, fish lines and similar goods have been marked up about 10 per cent. Wire hat and coat hooks have been slightly reduced in price; the 3-inch make is selling now at 75 cents per gross. Prices of American ice cream freezers are about 10 per cent. in advance of those of last year.

Lawn Mowers—There is a fairly active demand this week and some deliveries are now being made. Prices continue steady at figures formely quoted, which were: With 8-inch wheel, sizes 12, 14 and 16 inch, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16. $4.50; 18 $4.75; 20, $5.25 each.

Garden Hose—Still in steady demand at firm and unchanged prices. We quote again the following discounts: Trade, 75 per cent.; Western, 65 and 10 per cent.; White, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; cotton, 60 per cent.

Hose Reels—Prices are from 15 to 25 per cent. higher than last year. It is impossible to give any satisfactory quotations on this line as there are so many makes and no standard price. It is safe to state, however, that there has been an advance of from 15 to 25 per cent.

Ice Cream Freezers—The American makes are about 10 per cent. dearer than last year. Trade is now commencing to be quite active. We quote the following prices which apply to the leading brands on the market: One quart, $1.50 to $1.60 each; 2 quart, $1.70 to $1.80 each; 3 quart, $1.95 to $2.25 each; 4 quart, $2.35 to $2.60 each; 6 quart, $2.95 to $3.25 each; 8 quart, $3.70 to $4.10 each; 10 quart, $4.75 to $5.50 each; 12 quart, $5.75 to $6.50 each; 14 quart, $6.75 to $7.50 each.

Agricultural Wrenches—In steady demand. The discount is now 25 per cent. off list, which means a slight reduction in price.

Harvest Tools—Orders are now being booked in large quantities and shipments will soon be made. The discount is 60 per cent.

Spring Hinges—The demand continues good and prices are steady. We again quote as follows: No. 5, $17.25 per gross; No. 10 $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Heavy Screw Hooks and Hinges—These are selling well at unchanged prices. Sizes 12 inches and upwards are selling at $3.25 per 100 lbs; the price of the 6, 8 and 10-inch sizes is $4.25.

Wire Hat and Coat Hooks—These have been slightly reduced in price. The 3-inch size is selling at 75 cents per gross.

Churns—There is a good demand at unchanged prices. The discounts are 40 and 15 per cent. f.o.b. Montreal and 30 and 30 per cent. f.o.b. factory.

Sap Spouts—The maple sugar season being now in full swing, there is a good demand for sap spouts. The price is $6.75 per 1,000. Cook's sugar bits are selling at 50 per cent off list.

Poultry Netting—Some orders are still coming in, but the greater part of the season's business has been already booked. Deliveries are now being made. Discounts for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-gauge, the discounts are 55 and 5 per cent.

Galvanized Poultry Netting Staples—In steady request at former prices which were as follows: Sizes 5-8, 3-4, 1, 1 1-8, 10-lb boxes, $12.50 list; 25 and 50-lb boxes, $12.25 list; 100-lb boxes, $12 list. Less 57 1-2 per cent.

Bed Staples—The discount on the Montreal Rolling Mills Company's and the B. Greening Wire Company's lists is 57 1-2 per cent. The discounts on the Dominion Wire Company's list are 25 and 2 1-2 per cent.

Blind Staples—The discount is 40 per cent.

Boxwood Rules—Discounts range from 52 1-2 to 50 per cent. off list.

Shot Guns—These can be obtained at very low prices owing to the severe competition of the American manufacturers.

Wire Nails—Trade has been slack this week, but an active trade is expected to commence with the opening of navigation. Prices are very firm at former quotations which were as follows: $2.40 per keg carlots and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford and St. John.

Cut Nails—Business has been quiet this week. Prices continue steady at former quotations, which were: $2.30 per keg f.o.b. Montreal, Toronto, Hamilton and St. John.

Fence Staples—Prices continue as follows: $3 per 100-lb keg for galvanized, and $2.80 for bright; 25 to 50-lb packages, 25c extra.

Pressed Spikes—The discount is 25 per cent.

Horseshoes—There is some little improvement in business since the first of the month, but the volume of business is not yet very large. Prices continue steady at former figures. Our quotations are as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c per keg extra f.o.b. Montreal only.

Horsenails—Trade has been improving since the first of the month. We

quote: C brand, 40, 10 and 7 1-2 per cent. off list; other brands 55 to 57 1-2 per cent. off.

Screen Wire Cloth—The price is $1.50 per 100 square feet.

Galvanized Coil Spring Wire—Trade is showing considerable improvement. We again quote the following prices, which are being well maintained: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Carlots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in carlots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—The demand continues steady. We again quote as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11 $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots 12 1-2c extra per 100 lbs will be charged.

Barb Wire—The market is quiet and without new feature. Most retailers have bought from the independent company and are waiting. for deliveries. Prices continue at former quotations, which were: $2.75 per 100 lbs f.o.b. Montreal, and $2.50 f.o.b. Cleveland. Carlots of 15 tons $2.40 f.o.b. Cleveland.

Smooth Steel Wire—There is a fair trade passing at unchanged prices: Bright and annealed, $2.50 per 100 lb f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb are now as follows: Coppered wire, 60c; tinned wire. $2; oiling, 10c; spring wire, $1.25; best steel wire, 75c; bright soft-drawn, 15c; hay-baling wire, 20 to 25c.

Annealed Hay Wire—Annealed hay wire and annealed and oiled wire are now sold at list prices plus the usual extras.

Fine Steel Wire—There is a quiet trade doing at steady prices. The discount is 25 per cent. with net extras as follows: 1 and 2-lb hanks, 25c per 100-lbs; 1-2-lb hanks, 37 1-2c; 1-4-lb hanks, 50c.

Brass Wire—The market is quiet. The discount is 60 per cent.

Copper Wire—There is very little doing. The discount is 60 per cent.

Rivets and Burrs—Trade is brisk. Discounts are as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—Business is very active at present. Many "rush" orders are reported, but manufacturers are able to attend to them promptly. Prospects are bright for an active trade this season. Discounts continue as follows: Carriage bolts common, ($1.00) list 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes 4c per lb off; nuts, hexagon, all sizes, 4 1-4c per lb off.

Washers, 45 per cent. off.

Screws—It is feared that there will be some difficulty this Summer as there was last in filling orders for some sizes. Already there is a shortage in some sizes but it is thought that conditions will not be so bad as last year. During the freight blockade, manufacturers were unable to get their raw material and this is in great measure responsible for the present difficulties. Discounts continue as before: Round head, bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head 80 per cent.

Cordage—There is a satisfactory trade in all lines of cordage. The rope market is steady and the volume of business very large. All cotton goods are firm. Mason lines, chalk lines, fish lines, etc., have been advanced about 10 per cent. We quote the following prices: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; Russian tarred spunyarn, 13 1-2c; jute rope, 3-8-in in diameter and upwards, 9c; cotto nrope, 21c; cotton twine, 24c for 3 and 4 ply. Cotton bedcord, 90c to $1.70, according to length. Sash cord 30 to 31 1-2c; cotton candle wick, 22 to 24c.

Building Paper—There is a further improvement in the demand. Our quotations continue as follows: Tarred felt, $1.85 per 100 lb; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry sheathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c per roll.

Cement—Business is now commencing to pick up and orders are being received for shipment at the opening of navigation. German cements are unchanged in price as large stocks were accumulated last Fall before the surtax went into effect and the German manufacturers are now offering concessions almost equivalent to the amount of the surtax. Prices continue as before. Our quotations are as follows: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel, ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—These are now moving in large quantities and it is doubtful whether supplies on hand are sufficient to last until the opening of navigation. English are selling at $16 to $22 per 1,000; Scotch, $17 to $22.

PLUMBING GOODS.

In all lines of plumbing goods there has been an active trade, and orders are still arriving freely. Jobbers have still a lot of goods to ship when navigation opens, and the backwardness of the season in this respect is interfering somewhat with the trade. (Last year the river was clear about March 24.) Forward orders are consequently accumulating, and with a clear waterway there will be a big rush of shipments. Both lead and iron pipe are in good demand. Soil pipe and fittings, as usual at this season of the year, are in active demand and shipments are going forward rapidly.

Lead Pipe—The market is active. Prices are well maintained, on a basis of 8c for composition and 7c for ordinary. The discount is 35 per cent.

Soil Pipe and Fittings—The market is without any new feature. Business continues brisk and prices stationary. Our quotations are as follows: Light soil pipe, 3 to 6-in, 50 and 10 per cent.; medium and extra heavy soil pipe, 2 to 6-in. 60 per cent.; extra heavy soil pipe, 8-in, 45 per cent. Light fittings, 2 to 6-in, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in, 60 and 5 per cent.; extra heavy fittings 8-in, 45 per cent.

Iron Pipe—Trade in iron pipe is active this week though there is nothing new of importance to note. Prices have not changed. We again quote: Standard pipe, per 100 feet, in length under 19 feet—black, 1-8-in, $2.30; 1-4-in, $2.30; 3-8-in, $2.55; 1-2-in, $2.85; 3-4-in, $3.65; 1-in, $5.20; 1 1-4-in, $7.35; 1 1-2-in, $8.95; 2-in, $12.55. Galvanized—1-4-in, $3.20; 3-8-in, $3.45; 1-2-in, $3.90; 3-4-in, $5; 1-in. $7.20; 1 1-4in, $10.05; 1 1-2-in, $12.20; 2-in, $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.; and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in, $4.20; 3-4-in, $5.25; 1-in, $7.55; 1 1-4-in, $10.55; 1 1-2-in, $12.75; 2-in. $17.60. Galvanized—1-2-in, $5.25; 3-4-in, $6.65; 1-in, $9.55; 1 1-4-in. $13.25; 1 1-2-in, $16; 2-in, $21.90. The discount on all sizes of extra heavy pipe is 12-12 per cent.

Solder—There has been some easing off in tin but it has not been of sufficient account to make any change in solder, which continues active at 18c for bar solder and 18 1-2c for wire solder.

METALS.

The metal market is active, though the volume of business is not as great as it would be were river navigation not so unusually delayed. Still there is a very

satisfactory trade passing, and speaking generally, prices have been pretty stationary. Ingot tin has weakened a little. Copper, on the other hand, is very firm, and if anything, higher. There has also been great strength shown on the New York copper market and spot metal has sold higher. It is said that the cost of the production of copper is increasing on account of the greater depth to which mines are being worked. The average of mining, smelting and marketing is placed at 9c per lb. The lead market is also very high and firm. Iron and steel show little change. Steel plates and all structural materials continue to move briskly. There is said to be some scarcity on this market in large tin sheets, 4 feet wide, 22 to 24 gauge, only one or two jobbers appearing to have any.

Pig Iron—There is no change in the local iron market. A good demand is reported. Prices are well maintained, and all indications point to an improvement in the conditions of the market. We quote: Summerlee, $20.25 to $20.75; Gartsherrie, $20; Londonderry $18.50 to $19; Carnbroe, $18.50; No. 1 Middlesboro, $16.50; No. 2, $15.50; Ferrona iron, delivered in Montreal in car lots is quoted as follows: No. 1, $18; No. 2, $17.50; No. 3, $16.50; No. 4, $16.

Bar Iron—There was a meeting of the manufacturers last week in Montreal, but it is not learned that any change of importance was made. A fairly good trade is doing, on a basis of $1.75 for merchants' bar; horseshoe iron, $2; forged iron, $1.95.

Black Sheets—The market is moderately active. Prices unchanged. We quote: 28-gauge, $2.35; 26-gauge, $2.30; 22 to 24-gauge, $2.25; 19 to 20-gauge, $2.30, and 8 to 10-gauge, $2.40.

Steel—There is nothing new to report in this. The demand is good. We quote: Sleighshoe, $1.90; tire, $1.95 to $2.10; spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—The usual steady demand is experienced for tool steel. There is no quotable change and prices are: Black Diamond, 8 to 9c; Sanderson's, 8 to 9c, according to the grade; Jessop's, 13c; Jonas & Colver's, 10 to 20c; "Air Hardening," 65c per lb; Conqueror, 7 1-4c.

Sheet Zinc—A moderate trade is doing at $6.15 to $6.25 in cask lots, and $6.50 in smaller.

Galvanized Iron—A large quantity of this is now being disposed of at steady prices. We quote as follows: 28-gauge, Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz, $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c extra.

Tinplates—The price is yet unchanged. A fair trade is doing at $3.75 for cokes and $4 for charcoals.

Terne Plates—We quote $6.75.

Ingot Tin—The price this week is lower, and the market, following conditions in England, is easier in tone. We now quote 32 to 32 1-2c, 1-2c below last week's quotation.

Ingot Copper—During the past few days copper has been advancing on the New York market, and locally the feeling is very firm at 13 3-4 to 14c per lb. The former price would be for large quantities only.

Antimony—No change. Price 8c per pound.

Coil Chain—There is an active demand for chain. No quotable change is reported. Our quotations are as follows: No. 6, 10c; No. 5, 9c; No. 4, 8 1-2c; No. 3, 7c; 1-4-in, $6.10; 5-16-in, $4.70; 3-8-in, $4; 7-16-in, $3.80; 1-2-in, $3.70; 9-16-in, $3.55; 5-8-in, $3.35; 3-4-in, $3.30; 7-8-in, $3.25; and 1-in, $3.20 with 10c allowance on carlots.

Canada Plates—There is a good demand. Canadas would perhaps be a little lower for import, but very little; 60 and 75 sheets are quoted lower this week, bringing them to the same basis as the 52s. We quote: 52s, $2.30; 60s, $2.40; 75s, $2.55; full polished, $3.60 and galvanized, $4 to $4.10; galvanized 60s, $4.25 to $4.35.

Pig Lead—Lead has been going steadily up since our last report, and further advances are predicted in some quarters. Though no quotable change is given, it should be understood that $3.40 is the rock bottom price for large quantities. We quote: $3.40 to $3.50.

Zinc Spelter—This is unchanged at 6c.

Scrap Metals—Trade is fairly good this week, and prices are maintained on all lines. Prices on heavy copper and wire are a little better, but the figures given below are about correct. Copper is firm and expected to go higher. Machinery cast and stoveplate are in good demand, thought some scarcity is reported in the former. The market for No. 1 wrought iron is still dull. It was expected that there would have been some advance in this before now, but no change has taken place. We quote: Heavy copper and wire, 10 1-2 to 11c per lb; light copper, 10c; heavy red brass, 10 to 10 1-4c; heavy yellow brass, 8 1-2c; light brass, 5 1-2c; lead, 2 3-4c; zinc, 2 3-4 to 3c; iron, No. 1 wrought, $10 to $12; machinery scrap, $15 to $16; stove plate, $12; mixed country rags, 65 to 75c per 100 lbs; old rubbers 5 1-2 to 6c per lb.

HIDES.

There has been no change in hides. We quote:

Toronto, April 15, 1904

Hardware.

A MATERIAL improvement in business over former weeks is reported though business is still far from being what it is expected it will be towards the end of the month, by which time roads should be well dried up and business at the retail stores more active. Trade is particularly active in Spring lines, notably Spring shelf hardware, wire, manure forks, rope, chain, plow lines, trace chains, spades and shovels, garden rakes, nails, bolts and nuts, rivets and burrs, building paper, cordage, etc. It seems evident that owing to the transportation difficulties retailers have allowed their stocks to become depleted and now have to buy fairly generously. Where possible, however, they are waiting for delivery by water on the opening of navigation. All branches of trade are, in fact, looking to the opening of navigation for relief from the present trouble in securing prompt delivery. Prices throughout are steady, the only changes in our quotations being a reduction in track door hangers and an advance in cotton cordage.

Steel Track Door Hangers—A reduction has been made by Canadian manufacturers, to meet the competition of imported hangers. The quotations now are: Steel track, 1x3-16 inches, $3.75; 1 1-4x3-16 inches, $4.75. At least one house is, however, quoting as low as $3.50 for 1-inch hangers.

Chain—Buying continues fairly liberal. The advance is well maintained. Prices are still as follows: 1-4-inch, $5.60; 5-16-inch, $4.45; 3-8-inch, $3.85; 7-16-inch, $3.70; 1-2-inch, $3.55; 9-16-inch, $3.45; 5-8-inch, $3.35; 3-4-inch, $3.25. A good business is reported.

Step Ladders—There is a good demand for pine ladders on this market at 10c per foot for 3 to 6 feet, and 11c per foot for 7 to 10 feet ladders.

Lawn Mowers—The retail trade being well booked up and not selling yet orders are not frequent. Prices are steady as follows: Woodyatt, 10 1-2 inch wheel, $8.50; Star, 9 inch, $7; Daisy, 8 inch, $5.75; Philadelphia, 7 1-2 inch, $7; Ontario, 7 1-2 inch, $15.80; King Edward, 12 inch, $9.50 (14-inch cut in aboce). D. Maxwell & Sons, 10 1-2 inch, $7.50 to $10; 9 inch, $5.50 to $6.25; 8 inch, $4.90 to $5.50. Discount 50 per cent.

Screen Doors—An improvement in the demand is noted. Prices are unchanged as follows: Common, two or three panel, walnut, 4 inch, $6.50; yellow and green stained, $6.75; in natural colors oil finish, $8.75, with 20c less for 3-inch style.

Screen Wire Cloth—Prices are steady at $1.50.

Spring Hinges—An improved trade is reported with prices steady as follows:

PORTLAND CEMENT

No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—Sorting orders are coming in fairly generously. Prices are steady. We again quote: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c per 100 lbs extra charged.

Barb Wire—A fairly good business is doing. Our quotations are steady as follows: $2.75 per 100 lbs f.o.b. Toronto and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—The business in this line continues to be larger than last season. The market is steady. We quote: No. 9, $2.70 per 100 lbs, freights equalized with factory points at Montreal, Hamilton, London, Welland or Walkerville and allowance to other points up to 25c; carlots, $2.65, freight allowance to 20c.

Wire Nails—There is a good trade doing. Wholesale houses have agreed to allow dating orders ahead to June 30 instead of May 31 as at present at $2.45 per keg, f.o.b. Toronto, with carlots $2.40.

Cut Nails—There is a fair trade, with prices steady at $2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—A moderate trade is reported. Prices show no change. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c less.

Horsenails—Orders are coming in somewhat more liberally. We still quote discounts as follows: "C" brand, 40, 10 and 7 1-2 per cent.; other brands, 55 to 57 1-2 per cent.

Screws—A good movement in this line is recorded. Prices are steady. We quote: Flat head bright, 87 1-2 per cent. discount; round head bright, 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—Practically every order that comes to hand calls for rivets and burrs. Prices are firm. We again quote as follows: Iron rivets, 60 and 10 per cent. discounts; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—Sorting business is quite active. Prices are steady: We quote: Carriage bolts, common ($1 list), 3-16 and 1-4-inch, 60 per cent.; 5-16 and 3-8-inch, 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list),

60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—Cotton twine, sashcord and waste are all higher. Binder twine is steady. A fairly good trade is reported. Our quotations are as follows: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; double shingleyarn, 11c; single shingleyarn, 10 1-2c; sashcord 'Hercules,' 32 to 35c; 'Star,' 36 to 38c; cotton rope, 3-16-inch and up, 20 1-2 to 22c; 5 32-inch, 25 to 27c; 1-8-inch, 25 to 28c; cotton twine, 3-ply 25 to 28c; 4-ply 32 to 34c; calking cotton, 16 1-2 to 17c; cotton waste, colored, 6 3-4c; white, 11 to 13c.

Building Paper—The demand continues exceedingly good. Prices are steady throughout. We quote as follows: Tarred felt, $1.85 per 100 lbs; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry seathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c per roll.

Firebricks—Prices are steady, the demand active. We quote English and Scotch at 28 to 35c.

Cement—The market is keenly active and prices firm as below: Canadian Portland, $1.90 to $2.25; American Portland, $2 to $2.10 f.o.b. Toronto.

PLUMBING GOODS.

A general increase in the demand for plumbing goods is reported. Building operations are still curtailed by the backwardness of Spring and labor difficulties. A feature of the business is the rapid manner in which galvanized iron pipe is taking the place of lead pipe in plumbing operations. There is a particularly good demand for enamelled, copper and brass lines. Prices are steady throughout.

Lead Pipe—Business is slow at steady prices. We quote: Lead, 7c; lead waste pipe, 8c; discount 35 per cent.

Soil Pipe and Fittings—An improvement in the demand continues. Prices are steady. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-inch pipe 40 and 5 per cent.

Iron Pipe Fittings—Business is larger than last week. We quote: Malleable fittings, 20 per cent.; cast iron (standard), 57 1-2 per cent.; headers, 52 1-2 per cent.; flanged unions, 60 per cent.; malleable bushings and plugs, 57 1-2 per cent.; nipples up to 6-inch inclusive, 67 1-2 per cent.

Copper Range Boilers—A fair trade has been done since the new prices were issued. Discounts at 15 per cent. continue.

Iron Pipe—The demand from outside is improving while trade in Toronto continues active. We quote f.o.b. Toronto: Black pipe, 1-8-inch, $3.25; 1-4-inch, $2.07; 3-8-inch, $2.25; 1-2-inch, $2.50; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.85; 2-inch, $11.05; 2 1-2-inch, $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25. Galvanized pipe, 1-4-inch, $2.88; 3-8-inch, $3.11; 1-2-inch, $3.42; 3-4-inch, $4.40; 1-inch, $6.35; 1 1-4-inch, $8.80; 1 1-2-inch, $10.75; 2-inch, $14.80.

Enameled Ware—There is a brisk movement at the lower prices. We quote: "Standard" 5 1-2 feet rolled rim, first quality, at $21.60; second quality, $17.85. There is no change in closet quotations.

Brass Goods—Business has improved since the increasing of the discounts, which are given in detail on page 62 of this issue.

METALS.

Business continues of large volume, manufacturers coming into the market with good orders both from stock and for import. Prices are fairly steady. The United States pig iron is not as stiff as last week, but is still strong enough to give a comparatively firm tone to the Canadian market. Bar iron is also firm. Some complaints of dumping of United States steel are heard, yet the steel situation is considerably stronger than it was during March. Copper and tin are steady.

Pig Iron—The local situation continues fairly strong. Prices are nominally unchanged. The bulk of the business is done in Canadian iron, but considerable English iron is coming in. The

quotations are: Middlesboro, $19.50; Canadian $18.50 to $19 for No. 1 and $18 to $18.50 for No. 2, f.o.b. Toronto; Midland, $1.50 lower.

Bar Iron—The market continues firm. Stocks are large but there is a big demand. Prices are steady at $1.80 f.o.b. Toronto. For extras as cut to length while rolling, 2 feet and over, 10c per 100 lb; 1 foot and under 2 feet, 15c; under 1 foot, 20c; over 20 feet by special agreement according to length and size.

Steel—Complaints are made that steel is being dumped on this market at lower prices than those now prevailing at Pittsburg. There is a good demand. Our quotations are as follows: Jessop's high speed, 60c; Jessop's "Standard" tool, 14c; "Chas. Leonard," 8 to 9c; Jessop's best crucible sheet steel, 14c; Crucible Steel Co.'s "Black Diamond," 10 to 11c; "Silver," 13c; "Special," 17c; "Rex" high speed, 65 to 75c; "Self Hardening," 45 to 50c; Morton's tool steel, 14c.

Black Sheets—Orders for both import and stock are excellent. Prices are steady.

Canada Plates—Business is increasing in volume. Prices are unchanged, though firm. We quote as below: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—A large trade is doing. Quotations locally are firm but unchanged at 30 to 30 1-2c.

Galvanized Sheets—There is an excellent demand from stock. Import trade is also brisk. Prices are steady throughout. Our quotations are as follows: Queen's Head, $4.25 for 28 gauge; American, $.4 for 28 gauge; Bell brand, $4.25 for 28 guage; Gordon Crown, $4.25 for 28 gauge.

Tinplates—Prices are unchanged. A good business from stock and for import is reported. Import business is also satisfactory. We quote: Coke plates, bright, 14x20, $3.50; charcoal plates, $4.25.

Copper—There is no change in prices. We quote: Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—The market is firm, a good trade being reported. We quote $3.30 per 100 lbs for pig lead and $3.65 for bar lead.

Zinc Spelter—A fair demand at 6 to 6 1-2c per lb.

Zinc Sheets—The market is firm and a fair business doing in small lots. We quote: Cask lots, $6.70 to $7, and part casks $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c, and wiping 17c.

Antimony—8c per lb.

Old Material—The general aspect of the market is inclined to be a little shaky. The drop in No. 2 wrought iron the probability of which we spoke of last week, has taken place, the price now paid being $1 lower than last quotations. No. 1 wrought is also down 50c, while heavy copper and wire and heavy red brass are 1-2c easier. We quote: Heavy copper and wire, 10 1-4c per pound; light copper, 9 1-4c per pound; heavy red brass, 9 1-4c per lb; heavy yellow brass, 8 to 9c per lb; light brass 5 to 5 1-2c per lb; lead, $2.50 per cwt; scrap zinc, 3c per lb; iron, No. 1 wrought, $10; No. 2 wrought, $3; machinery cast scrap, $14; stoveplate, $10; malleable and steel, $4; old rubbers, 5 1-2 to 6c per lb; country mixed rags, 50c per 100 pounds.

Newest Artistic Ideas

Are embodied in the decorations found in our METALLIC ceilings and walls.

They make a most beautiful interior finish and in addition are so practically durable and sanitary that it is easy to understand their immense popularity.

Equally suited for use in new or old buildings.

There's big business in these lines for you.

The Metallic Roofing Co., Limited

TORONTO MONTREAL WINNIPEG

TRADE CONDITIONS IN MARITIME PROVINCES.

From the Regular Correspondent of HARDWARE AND METAL

Halifax, April 11, 1904.

WHOLESALE houses are well satisfied with the way April business has opened up and all report an active trade. The only complaint heard is regarding collections in some districts, but this it is believed is only a temporary feature. Fishing has again become remunerative and the ocean gives signs of yielding up its wealth much more liberally than last season. Nearby bankers have secured excellent fares for which good prices were obtained, so that with the high price of lobsters, money again will be in circulation in the shore counties and store bills will be more promptly met. The Lunenburg codfishing fleet has cleared for the Grand Banks at an unusually early date and every ship is showing a determination to make up the shortage from last season's operations.

* * *

Some months ago the Imperial military authorities at this city discovered that large quantities of cement had been stolen from the docks here. A teamster was arrested on the charge of stealing cement and sentenced to six months' imprisonment. At the time of trial he made a statement implicating three contractors, one of whom was last week arrested on the charge of receiving stolen property. The incident has aroused a good deal of interest in hardware circles, on account of the standing of the parties supposed to be implicated in the affair.

Mr. James Pender, the St. John wire nail manufacturer, returned last week from Montreal where a meeting of Canadian nail makers was held for the purpose of considering the renewal of the agreement between these parties and the United States Steel Trust, whereby the latter undertakes to sell no nails on the Canadian market on the condition that domestic factories purchase all their wire rods of the above corporation. Mr. Pender, who was a party to the agreement in other years, refused to sign on this occasion, and gives as his reasons, the completion of the rod mill at Sydney and a patriotic desire to be free to patronize the local industry. He also states that the United States concern has failed to live up to its agreement to sell rods as cheaply as they can be bought for elsewhere, having for the past year or two been charging four to five dollars a ton more for rods than they could be bought for in Europe. Owing to the fire in the Maritime Nail Works, the supply of rods on hand has been turned over to the Pender concern, so the latter will have ample material to keep running until supplies can be received from the Dominion Iron and Steel Company. The duty on nails is 60 cents per 100 lbs. so the United States Steel Co. will have to sell nails at the price they formerly obtained for rods in order to demoralize the Canadian market.

BUSINESS CONDITIONS IN BRITISH COLUMBIA.

By Regular Correspondent of HARDWARE AND METAL.

Vancouver, B. C., April 9.

THE announcement made at Winnipeg this week by Mr. Wm. Whyte, second vice-president of the C. P. R., that the "lumber combine," as he calls it, has been broken in the Northwest Territories and Manitoba and that in future lumber would be sold in an open market, created no disturbance here. It is merely saying in another way that the retail lumber association of the Northwest is now an open body so far as membership is concerned. Any person applying for membership and agreeing to conform to the rules of the association can become a member. Formerly it was a close corporation like a club, and the applications for membership were considered carefully. Refusals were made where the applicant wished to open a yard in a district which would conflict with that of another member.

The most interesting part of Mr. Whyte's announcement is that the railway company are actually reducing their rates on lumber from British Columbia to Manitoba and the Northwest Territories. When the arrangement was first proposed that the millmen should reduce their list price $1 per M. if the C. P. R. would reduce the freight rates 2 cents per hundred pounds, which would equal the millmen's reduction, Mr. Peters, general freight agent, while here said the C. P. R. were not going to make any reductions. In fact he rather asserted that there were no favors coming to this province. Now that Mr. Peters' superior officer makes the statement, it can be taken for settled that the joint understanding is to be put into effect.

* * *

The Blue Funnel steamer Agamemnon arrived in port this week with cargo from Liverpool via the Orient for British Columbia ports. She first discharged 700 tons of general cargo at Victoria and then came on here where she discharged a similar amount. The principal items included in the hardware shipments were about as usual, ship chandlers' stores, anchors, wire cables, chain, tin plates, galvanized sheets, pig lead, tin and iron, bar steel and bar iron, etc. It is rather odd that pig lead should be imported into British Columbia, but it is said that the quality is better than the Canadian article and it is therefore preferred for some purposes. The Agamemnon took out from this port 125,000 ft. of lumber shipped by the Hastings saw mill and 50 tons of canned salmon, about the last held in stock by the packers.

* * *

The progress of the Vancouver Power Co.'s scheme of supplying electricity, generated by water power, is marked this week by the shutting down of the steam plant at Burnaby, used to drive the inter-urban line between Vancouver and New Westminster and the New Westminster line as well. Early in the year the first unit of the water power plant was utilized for the electric lighting system of Vancouver, and now that the inter-urban line is also put on the water power plant, it reduces greatly the steam-generated electric energy. In less than a year the steam plant will be closed entirely.

* * *

The International Coal and Coke Co., which is a subsidiary company to the Granby Smelting and Mining Co., of Grand Forks, are making rapid progress in opening their coal measures in the Crow's Nest District, or rather in Alberta, just east of the Crow's Nest Pass country. They are having a $150,000 plant installed by Elliott & Baton, consulting coal mining engineers of Pittsburg, Pa., who secured that contract last Fall. A plant is being installed with a capacity of 2,000 tons daily, and the opening of the mines for the supply is being carried on with all speed. The first battery of coke ovens will be erected as soon as the frost is out of the ground. The Granby people propose to supply their own coke for the big smelter at Grand Forks, where they handle all the ore from their mines in the Phoenix camp. It is the intention of the company also to enlarge the capacity of the smelter.

* * *

In the development of the oil district of Southwest Alberta, just under the shadow of the Rockies, there is every chance of a big strike before long. At Cardston, in the Mormon colony, there was some excitement this week because one of the wells being bored had yielded about 15 bbls. of crude oil. The upper part of the well had not been piped and it caved in and stopped the flow temporarily. The company owning this well claim to have struck oil first last Fall. They have every confidence that they will be producing largely in a short time. The depth at which the oil has been found, 700 ft., is the shallowest at which it has ever been found except in Alaska.

* * *

The output of the Boundary District mines so far this year is over 200,000 tons, valued at $1,000,000. The Granby mines at Phoenix, shipping to Granby smelter at Grand Forks, the Mother Lode shipping to Greenwood smelter, the Emma and the Oro Denore are the principal shippers. From Rossland comes the news of a temporary shutdown of the Northport smelter, to which the Le Roi and other Rossland mines usually ship. The mines are also temporarily shutting down.

* * *

In local markets, quotations have not changed since last report. English advices show that the steel market is stiffening up generally, especially rails. The very best English pale boiled linseed oil is now selling on the local market at 55 cents per imperial gallon, f. o. b. cars Vancouver. This is quite a change from two or three years ago, when the price went up to $1.10 and $1.15. The Canadian article has been dominating the market here for over a year, though there is some of the English article on sale.

PITTSBURG METAL MARKET.

From The Iron Trade Review, April 13, 1904.

THE option on 45,000 tons of Bessemer iron for May delivery which the United States Steel Corporation had with Valley merchant furnaces expired this week. The option was to have been exercised on April 10, but by agreement the matter is in abeyance for the present. This action was a surprise to the trade, as it was confidently expected the options would be taken up. It is believed in some quarters that pending ore questions have a bearing on the Steel Corporation's decision regarding pig iron. The meeting of Lake Superior ore producers was again postponed last week until Tuesday, April 19, and as the opening of the navigation season is not far off, it is not believed that there will be any further postponements. In the meantime a number of furnace companies are negotiating for their ore supply for long terms, while others are figuring on an interest in ore properties in the Lake Superior region. Thus the tonnage to be purchased from year to year will be greatly reduced, and ore prices will no longer be the factor in the iron and steel trade which they are to-day.

Meetings of the plate, billet and structural associations were held in New York last week and prices were reaffirmed. There was no general meeting of billet interests, the executive committee transacting all the business, and as prices are being well maintained by all members of the association little business came before the board. Representatives of the plate and structural associations which met on Thursday reported that while the volume of business for early shipments is fairly satisfactory, being larger in structural steel than in plates, the amount of future tonnage is not heavy. A meeting of the shafting manufacturers is being held in New York to-day, but no change in prices is anticipated.

The lull in the pig iron market continues, while the new orders in finished lines are not very heavy. Mills, however, are working pretty full and specifications on nearly all lines except plates are being freely received. The demand for tin plate is reported heavy, while the sheet trade is improving. The future of the sheet and tin plate markets will depend much upon the action of the special convention of the Amalgamated Association. No arrangement has yet been made that is acceptable to the Amalgamated Association and the manufacturers, and unless an agreement is reached a strike cannot be averted. The convention has been in session since last Wednesday and the delegates from the sheet and tin plate lodges are opposed to the acceptance of reductions of 20 per cent. in both trades.

The tremendous improvement in the iron and steel trade since the first of the year is indicated by the operation of blast furnaces tributary to the Lake Superior ore region on April 1. On that

date out of a total of 159 furnaces reporting, 125 were in operation and 34 idle. The operative capacity was 85.5 per cent., while only 14.5 per cent. was idle. On January 1 only 31 per cent. of the capacity in this territory was active. On March 1, out of a total of 163 furnaces, 113 with 72 per cent. of the capacity were operative and 59 out, showing a gain of 12 furnaces during the month, due to a large extent to the resumption of idle merchant furnaces in the Valleys that received orders for Bessemer iron from the Steel Corporation. On April 1 the Steel Corporation had 92 per cent. of its furnace capacity in blast, while the Republic Iron & Steel Co. had all its furnaces in operation. The operative capacity of the merchant furnaces also increased from 58 to 72 per cent. The present month will show an increase, but it will of course be not nearly as great as that of the previous months. The settlement of the strike at the plant of the Wheeling Steel and Iron Co., Wheeling, W. Va., has resulted in the blowing in of one idle stack, and the second furnace is to go in this week.

During the past week the chain manufacturers succeeded in forming a strong association, only a few small interests being outside. A new list of prices was adopted which on the whole is much the same as the previous list. The nut manufacturers are also together again and have issued a new list of prices to the trade.

Bars—Demand for iron and steel bars is heavy and consumers are specifying freely. The market is very firm, but there is no indication that prices will be advanced in the immediate future. We quote: Bar iron, 1.40c to 1.45c, Pittsburg, for local delivery, while for Western shipment quotations are based on 1.35c, Pittsburg.

Structural Material—Specifications for structural shapes are heavy and considerable new business is being placed. The tonnage in the aggregate is far below that of the first quarter of last year. At a meeting of the structural manufacturers held last week prevailing prices were reaffirmed. We quote: Beams and channels, 3 to 15 inches, 1.60c; 18 to 24 inches, 1.70c; tees, 1.65c; zees, 1.60c; angles, from 3 to 16 inches, 1.60c; universal mill plates, 1.60c.

Wire and Wire Nails—While the new business that is being placed is not heavy, mills are operating full on orders placed some time ago and the outlook continues excellent. Wire nails, carload lots to jobbers, f.o.b. cars Pittsburg, are quoted $1.90 base; plain wire, carload lots, $1.80 base; barb wire, carload lots, $2.20 base; staples, carload lots, $2.05 keg. Galvanized, 30 cents extra. Carload lots to retailers are held at 5 cents advance in all lines, and on less than carload lots a further advance of 10 cents is charged.

Coke—Demand for both furnace and foundry coke continues heavy and furnace coke for early shipment is selling at $1.60 to $1.65, while foundry is quoted at $2.15 to $2.50. During the week ending Saturday, April 2, the production of the upper region amounted to 209,345 tons and the lower region 54,608 tons. Little trouble is being experienced on account of shortage of cars and shipments are being made more freely.

THE WHITTEN-DRUMMOND CO.

BY the organization of the Whitten-Drummond Co., Limited, Toronto, who have taken over the business of the late W. J. Whitten, the continuation of a business that has long borne an enviable reputation among Toronto retail hardware concerns is assured, and an interesting chapter is added to the story of a progressive young man's business career.

The late W. J. Whitten was known to practically everybody interested in Toronto hardware circles and was considered by all to be one of the "whitest" business men in the city.

W. A. Drummond.

In the new firm the estate of deceased will hold a financial interest equivalent to that held by him. W. A. Drummond, who has been admitted to partnership in the concern, is a young man who learned the hardware business under Mr. Whitten and who has, during the thirteen years he has been at the business, had a varied experience of large responsibilities.

After his first six years with Mr. Whitten, during which time he got a deep insight into hardware retailing, Mr. Drummond engaged with "Russill's-in-the-Market." The firm had primarily been interested in the fancy goods trade, but about the time of his employment with them they went into the hardware business so extensively and with such success that they eventually went into that line exclusively.

Some time later Mr. Drummond accepted the position of manager of the hardware and house furnishings department of the Robert Simpson Co., which he held for four years. While here he made a thorough study of departmental store methods and aided materially in building up the hardware department of that concern.

About three years ago he accepted a position with J. C. Woods, wholesale and retail fancy goods dealers, who have nine stores in London and other Western Ontario centres, as travelling manager of the various branches. While here he introduced many improvements, having charge of the overhauling of most of the stores, and doing, at the same time, much of the buying for the company. He remained with this company until leaving to go into the present partnership.

It is the intention of the new company to make the store one of the most attractive in the city. The offices have already been removed to the back of the store and the shelving re-arranged materially. A new front will be put in, and great attention paid to window display. The interior will be painted and shelf boxes installed; in short, everything done to make the store bright and attractive.

COTTON LINES IN HALIFAX.

There is no prospect of cotton lines going down in price so as to be of any advantage to our fishermen this Summer. The selling price is six to eight cents a pound higher than last Spring. The run on hemp fishing gear is consequently much heavier than usual this season. The lobster season east of Halifax is now open and a large number of traps are out. The demand for fishing and canners' supplies has been excellent during the past month and this branch of business has absorbed a large portion of the attention of wholesale hardware houses.

DESIRE CANADIAN AGENT.

The Grove Chemical Co., Appley Bridge, Lancashire, are manufacturers of glue, size, etc. They intend to push the sale of their product in Canada and would like to secure a Canadian representative. Further particulars will be given on request.

HARDWARE CONDITIONS IN MANITOBA.

Office of HARDWARE AND METAL
Room 308 McIntyre Block,
Winnipeg, April 13, 1904.

THE business situation for the past week has been bright and trade shows much improvement over the week before. The snow is rapidly disappearing throughout the country and in some parts of Southern Manitoba it is reported that seeding has already commenced. The market is steady and there is practically no change in prices of any note. We quote prices as below :

Barbed wire, 100 lb	$3 15
Plain galvanized, 6 to 8	3 39
" 9	2 50
Plain galvanized, 10	3 50
" 12	3 10
" 13	3 20
" 14	3 90
" 15	4 45
" 16	4 60

ALABASTINE WORKS DESTROYED.

The Canadian hardware trade will regret to learn that the works of the Alabastine Co., Paris, Ont., were completely destroyed by fire on Thursday. The fire broke out in the packing room of the works when the employes were away at dinner, and got such headway that nothing could be done to save the works. The loss is estimated at nearly $20,000, with an insurance of $8,000. A fireman was killed and two others were injured by the fall of the large iron smoke stack.

CONTRACTS AWARDED.

The Temiskaming & Northern Ontario Railway Commission has awarded the contract for the steel bridge over the Montreal River to the Dominion Bridge Company. Contracts have also been awarded the Crossin Car Co. for passenger equipment, and O'Boyle Bros., of Sault Ste. Marie for six 40,000 gallon water tanks.

THE SECRET OF SUCCESS.

"What is the secret of success?" asked the Sphinx.

"Push," said the button.

"Never be lead," said the pencil.

"Take pains," said the window.

"Always keep cool," said the ice.

"Be up-to-date," said the calendar.

"Never lose your head," said the barrel.

"Make light of everything," said the fire.

"Do a driving business," said the hammer.

"Aspire to greater things," said the nutmeg.

"Be sharp in your dealings," said the knife.

"Find a good thing and stick to it," said the glue.

CROWN JEWEL, STYLE "F."

The Crown Jewel Steel Range

Is indeed the Housewife's "JEWEL," made in Canada by the makers of the celebrated **Grand Jewel Cook Stove,** of which **over 30,000** have already been sold.

In view of the increased demand for Steel Stoves and Ranges, the makers are now giving their attention largely to this branch of the business, with highly successful results.

The Crown Jewel Steel Range has **Interchangeable Linings,** and will burn hard or soft coal, and when fitted with wood linings will burn wood 26 inches long. Six 8 or 9-inch Pot Holes with interchangeable key plates and large oven.

PAINT, OIL AND BRUSH TRADES

Conditions in the Paint Trade.

COMPARED with the first three months of 1903, January, February and March of this year do not compare very favorably as regards the volume of business in paints and oils. The month of March in 1903 saw the opening of Spring, and the weather was so fine that painting was commenced very early in the season and the paint trade received a great impulse. March, 1903, was in consequence an exceptionally busy month. Transportation a year ago was not hindered by storms and snow blockades, and hence business for January and February was in excess of the trade done this year, when the railways were unable to make deliveries and retail trade was so utterly demoralized that merchants were in no hurry to place their orders.

January this year opened out well and prospects seemed bright for a trade quite as large as that of the corresponding month in 1903. But during the latter part of the month and all of February business was below the average. March was quite up to the average, trade being as large as in the corresponding month of 1902, and not quite as large as in 1903. The first two weeks of April show a big improvement but it is doubtful whether it will be sufficient to compensate for the decline in the earlier part of the season. Some of the western houses are said to have laid off men and to have run less than full time during the blockade and hence the output will not be so large as last year.

Grinders are still selling white lead at cost and there does not seem to be any immediate prospect of an agreement to maintain prices at a profitable level. It would be some time before any such agreement could have any appreciable effect on the market as the manufacturers have contracted to deliver in Spring and Summer at the present low prices. No change could go into effect before September or October. Present conditions are very unsatisfactory to all branches of the trade for no one is making any profit. The retailer is feeling the result of competition in the same degree as the grinder.

The Future Flaxseed Supply.

That the seeding throughout the Northwest this Spring will be largely to wheat, owing to the high price of that cereal, goes without saying. If follows that the flax area will be reduced, farmers' prices for flaxseed of late having been anything but attractive. Speaking from the standpoint of probability, as now seen, the next crop of flaxseed in this country will be considerably reduced, and possibly so much reduced that the market will feel the effect of the shortage and respond with higher prices. But of this we must not be too sure, for the import possibilities are large. India and the Argentine are quite likely to be prepared to supply at low prices any deficiency we may have here.

The seed situation in this country is that of a vanishing quantity. Flaxseed is so largely sown on new soil in the Northwest that it has ceased to be grown in the older states where once it was a profitable crop. Sooner or later it will be crowded into the Pacific Ocean with the steady movement westward. One of two things must happen. Either the older states must take up anew the growing of flax, or imports of seed must be made by our crushers. Bear in mind that the demand for linseed oil is increasing, while the tendency of the native seed supply is to decrease. On the face of it there would seem to be no other way than to import seed when our own production shall have ceased to be sufficient. And, indeed, imports are likely to be available at low prices in comparison with the demands of the American farmer for seed which he must grow on old soil at some trouble and expense and without the maximum of yield.—Paint, Oil and Drug Review, April 13.

"Orolite" Oil Finish

is designed for all surfaces where a quick hardening varnish, or a rubbed or polished surface is required.

It is for interior use only, except where an outside undercoating is desired, over which a wearing or outside varnish is to be placed.

The color is quite pale, and will not discolor the lightest natural woods.

It brushes and works easily, has the necessary flowing, good lustre, dries hard to rub in 36 to 48 hours, and will polish in from three to five days. It will not check, crack, peel nor turn white.

Put up only in the following sizes with our brass seal; Gallons; ½ gallons; ¼ gallons; pints; ½ pints.

The Proof of Paint

is time and wear. If a paint will stand this test it is good. "ARK" Brand Paints have stood the test—the severest tests—and they have never been known to fail. Here's one dealer's word on this point:—

St. Pierre les Becquets, Que.

Messrs. The Francis-Frost Co., Limited, Toronto.

Gentlemen,—I have been selling your paint for two years and same has given me entire satisfaction and my customers prefer this paint a good deal to that of ——— which I was selling before.

I expect to sell a great deal more this year and I won't keep in stock any other than the "ARK" Brand, as I never had one complaint and it is the only paint my customers are asking for. Yours very truly,

T. J. DEMERS.

We stand ready to help every dealer to sell "ARK" Brand Paints—help him hard. Write us to inquire what we are ready to do.

The Francis-Frost Co., Limited

Paint and Oil Markets

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, April 15, 1904.

BUSINESS for the first two weeks in April has been of average volume. The general opinion seems to be that a certain amount of business has been permanently lost this Winter owing to the general paralysis of trade caused by the snow blockade. A continued improvement is expected during the next two or three months, but it is scarcely expected that it will be sufficient to compensate for the loss of trade earlier in the season.

Prices throughout show little change this week. White lead is still being sold at cost, but there is little new business at present as most retailers have bought for Spring and Summer requirements. Turpentine shows a further reduction of 1-2 cent per gallon for immediate delivery; shipments to arrive in May are being quoted at a reduction of 4 to 5 cents per gallon on present prices. The general opinion seems to be that the prices quoted now for May delivery will be maintained until June or July. There has been some severe competition this season in Paris green. Linseed oil has been reduced 1 cent per gallon. We quote:

Ground White Lead—Best brands, Government standard, $4.50; No. 1 $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead—$4.25 in casks, and in kegs $4.50.

Dry White Zinc—Pure dry, in casks, 6 1-4c; in 100-lb kegs, 6 3-4c; No. 1, zinc, in casks, 5 1-4c; in 100-lb kegs, 5 3-4c.

White Zinc—(ground in oil)—Pure, 25-lb irons, 8c; No. 1, 7c; No. 2, 6c.

Putty—Bulk, in barrels, $1.50; in 25-lb tins and irons, $1.80; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7c; 100-lb kegs, 7 1-4c; smaller quantities, 8 1-4c.

Red Leads—Genuine red lead, in casks, $4.25; in 100-lb kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks, $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge—Ground, casks, 5c; in less quantities, 5 1-2c; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 46c; 5 to 9 barrels, 45c; boiled, 1 to 4 barrels, 49c; 5 to 9 barrels, 48c. Delivered in Ontario between Montreal and Oshawa at 2c per gallon advance.

Turpentine—Single barrels 86 1-2c; 2 to 4 barrels, 85 1-2c. Standard gallon of 8.6 pounds. See remarks above.

Shellac Varnish—Pure white, $2.85 to $3.50; pure orange, $2.75 to $3.40; No. 1 orange shellac, $2.45 to $2.60.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil—8 3-4 to 9 1-4c in wholesale lots, and 1-2c additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c; 25-lb drums, 15 1-4c; 1-lb packages, 16c; 1-2-lb packages, 18c; 1-lb tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c per lb; 25 lb drums, 15 1-2c; 1-lb paper boxes, 16c; 1-lb tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

Ontario.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, April 15, 1904.

TURPENTINE still holds the centre of the stage as far as the paint and oil trade is concerned. Reports of various ups and downs on the Savannah market are heard from day to day. On the local market competition is keen and an all-round decline of 3c is noted this week. Other lines manifest an inertness approaching almost to dulness. Trade is also slow as compared with what has been expected of April. The continued unfavorable weather has deterred Spring painting so long that it is a question if much of what would likely have been done will ever be done.

White Lead—Ex-Toronto, pure white lead, $4.65; No. 1, $4.20; No. 2, $3.90; No. 3, $3.50; No. 4, $3.25 in packages of 25 lb and upwards; 1-2c per lb extra will be charged for 12 1-2-lb packages; genuine dry white lead, in casks, $4.50.

Red Lead—Genuine in casks of 560 lb, $4.25; ditto, in kegs of 100 lb, $4.50; No. 1, in casks of 560 lb, $3.75 to $4; ditto, in kegs of 100 lb, $4.25.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c per gallon.

Paris White—90c to $1 per 100 lb.

Whiting—60 to 65c per 100 lb; Gilders' whiting, 75c.

BRANDRAM'S B.B. GENUINE WHITE LEAD

has long been known as the best white lead the world produces. It is unequalled for whiteness, fineness and body, and will cover more than any other white lead manufactured. It is the only white lead used in the manufacture of

Anchor and English Liquid Paints.

TRADE MARK

This, together with the most permanent pigments known and the finest grinding in genuine Linseed Oil, Turpentine and Dryers, combine to make a paint that is unapproachable.

St. John.

This is the beginning of the quiet season for handlers of burning oil. The wholesale trade are little interested, however, as the trade, particularly in the city, are supplied by the two oil companies located here. Lubricating oils have much attention. Competition is keen. In paint oils stock is now moving quite freely. Linseeds continue low, with turpentine firm at full figures.

Window Glass.

MONTREAL.

There is a steady improvement in the demand and a better movement from stock. Orders for import also show an increase. Although there has been no actual change in quotations, prices are considerably stronger. We again quote: First break, 50 feet, $1.70; second break, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

There is not as much doing as was anticipated, but business is improving over former weeks. We quote: Star, first break at $3.30 per 100 feet and Double Diamond, first break, at $5.10. Discount 15 and 20 per cent.

"Hello, Halifax!"

Few firms are more widely known in the Maritime Provinces, and, indeed, in the Dominion of Canada than Black Bros. & Company, wholesale hardware merchants, Halifax. In an announcement to the trade they have the following to say with reference to the "Elephant" brand of ready mixed paints made by the Canada Paint Company, Limited. "Then we have a large stock of our own special brand of floor and house paints known to the trade as the "Elephant" brand, and the man who handles them will find that "Elephant" white paint is not a "white elephant" so far as sales are concerned. This is true of all colors of this favorite brand, which we never hesitate to recommend when occasion offers."

Will Erect Modern Paint Works.

The Standard Paint and Varnish Co., Windsor, Ont., have decided to erect and equip a new factory at a cost of over $40,000. They write concerning it: "We will, when settled in our new quarters, have a plant for the manufacture of all kinds of paints and varnishes which will be second to none in Canada.

E. McCarthy & Co., general merchants, Regina, have been succeeded by the McCarthy Supply Co.

P. Gagnon, general merchant, Ste. Flavie Station, is offering to compromise at 75c on the dollar.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITICISM

Edited by John C. Kirkwood, TORONTO.

NOTE—Herein are discussed the principles and practice of advertising. Subscribers are invited to send Mr. Kirkwood specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

CAUSES OF ADVERTISING DEATH.

Adapted from Printer's Ink.

IN a widely circulated and high-priced advertising medium in the United States there were upwards of 600 firms advertising to a greater or less extent one year who failed to make any use whatever of the same medium the succeeding year. An investigation into the reasons for this wholesale dropping out from a medium of tested excellence disclosed some interesting and instructive facts, facts which apply to the present day quite as forcefully as they did a dozen years ago, when this inquiry was made.

After exhaustive correspondence and study it was found that the three chief causes of advertising death were as follows:

First—The single insertion. A large percentage of business men who had been persuaded to begin advertising went no farther than one insertion as a "trial" of advertising. Many of the little moral stories of advertising success were tales of wonderful results secured from single advertisements by men who had starved themselves to pay for the space. Some of these stories were true, perhaps. All of them were pretty. They were popular, and had created the impression that the single insertion was a decisive test. But it was discovered upon investigation that advertising did not begin to pull until several insertions had been made and the idea had become well fixed in readers' minds. Size of space made little difference. Single insertion of a page advertisement only made a more expensive failure than that of an inch.

Second—Too small space. Tabulations of the spaces used by successful and unsuccessful advertisers showed that the latter, nine times in ten, attempted to create an initial impression with less than one-half the space used by successful advertisers to maintain an impression already created. Some advertisers attempted to market new articles with skimpy space. Another prime cause of advertising failure was imitation of successful advertising, the imitator attempting to compete with established successful advertisers on a third the space they had found necessary. Too small space was as fatal in continuous advertising as single insertions.

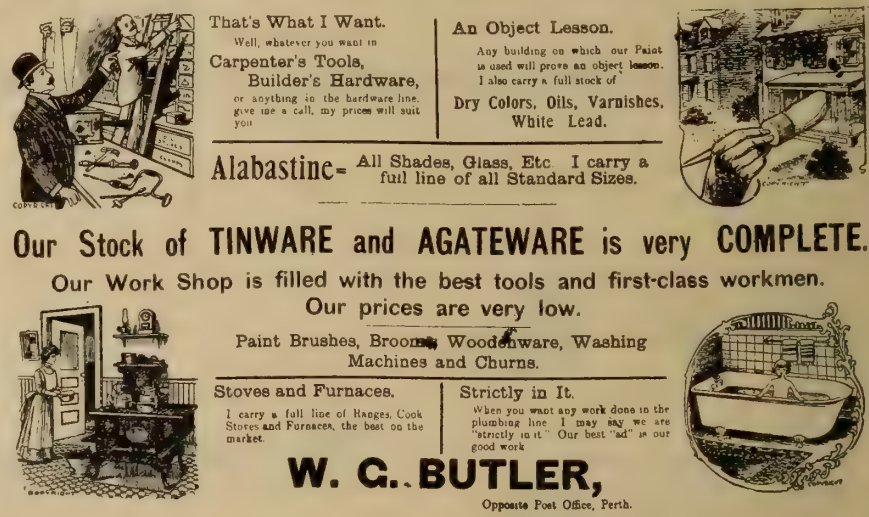
Third—Lack of follow-up facilities. Nobody seemed to know much about taking care of results. Advertisements were seldom keyed. The advertiser with a small appropriation gave least attention to follow-up, whereas he should have given the most, of necessity.

Any one of these defects was sufficient in itself to bring disaster to the advertiser, and had done so in many of the cases diagnosed. Then what chance of success did an advertiser stand where two or all three were present in his campaign? Nothing better than the chances of great good luck, or about the chance that makes for the recovery of a patient with tuberculosis, typhoid and appendicitis in conjunction. To apply the results of these discoveries to individual advertisers was not easy or reassuring. There was, for example, the successful business man who said he had managed his business thus far without advertising and could get along without it; and there was the man who "would advertise his own business in his own way."

To what extent a man should advertise—how much money to spend, what mediums to use, what pamphlets, catalogues, circulars, etc., to issue, how to tell one's story effectively are matters capable of a fairly definite statement. At any rate, the element of doubt, of conjecture, can be largely eliminated. But it requires patient and thorough study—a study that will pay for itself in money saved. A man will consider with full deliberation the purchase of merchandise, machinery or equipment, reckoning the cost from the view point of an investment, but when it comes to buying space in a magazine, newspaper or trade journal, he too often neglects to make the same searching inquiries.

A Good Spring Advertisement.

In the announcement published herewith Mr. Butler has developed an excellent plan for advertising at this season. The advertisement as it appeared in the local paper was a quarter of a column deep, four columns wide and as will be seen by the reproduction was well set up.



The four lines covered by the illustrations are all ones that are needed by the prospective builder, consequently the arrangement of the advertisement is such as to make it a particularly strong one for the purpose for which it is intended—to emphasize the full stock of building materials and supplies and of house furnishings carried by Mr. Butler.

It is, everything considered, one of the best examples of advertising done by the hardwaremen who make a specialty of technical work such as plumbing, tinsmithing, etc., that has been seen by Hardware and Metal for some time.

STOVES AND TINWARE.

Time Taken to Heat a Building.

A CORRESPONDENT of the Metal Worker asks for "a simple rule for determining the number of hours it will take to heat a school, church or other public building. For example: How long would it take to heat a church from zero to 70 degrees that contained 150,000 cubic feet of space with a heat outlet of 14 square feet? I would prefer some simple rule without algebraic equations."

"Plodder," Cincinnati, O., answers as follows: "I have read the inquiry of 'H. R.' in the issue of April 2 with some interest and sympathize with him in his search for information. At one time I was thoroughly mystified by some of the problems and methods of solving them that received attention at the hands of the experts in our excellent medium of trade information. I am afraid that 'H. R.' will have to do exactly the same as I have done, and that is to apply himself closely and study the methods that have been used by the experts, when he will have less horror of the algebraic equations, and can handle them as readily as he does his 2-foot rule to measure the things that he desires to know about. Long since, the mystery of the heat unit has been solved to my mind, and in the absence of any information, except his very broad question, the heat unit is the only thing that can be brought to bear on his proposition. Ordinarily, the heat unit will raise 60 cubic feet of air 1 degree. 'H. R.' desires to raise each cubic foot of air 70 degrees. If he divides 150,000 by 60, he will know how many heat units will be required to raise this air 1 degree. If he will then multiply this amount, which he will find to be 2,500, by 70, he will find that he needs 175,000 heat units. Now, the next question is, where he is going to get the heat units from—a steam coil, a hot water radiator, an indirect steam or indirect hot water radiator, a hot air furnace or a blower system of heating? Any of the engineers' handbooks will give the amount of heat that will be given per square foot of surface per hour with any one of these systems. I think that by this time 'H. R.' can readily see for himself that the time required is governed by the capacity of the apparatus. If he puts in a big apparatus, it will take half as long to heat the church as if he put in a smaller one. It is more economical to use a small apparatus that would take at least five or six hours to raise the temperature from zero to 70 degrees. In fact, in many churches the desired change in temperature is only effected when the apparatus is fired all night.

"'H. R.' has not completed his question. He should have asked how long it would take to heat the church with a given apparatus, or asked how large an apparatus would be required to heat the church in a given time? I would recommend that he purchase 'The Heating of Buildings,' by Prof. R. C. Carpenter, and study it carefully. He is in the same position as the 'cub' in the tin shop. He has many discouraging hours before he reaches the point where he can cut a pattern for a double Y. The man who instals heating systems cannot put up the apparatus the same as he does a stove, then collect his bill and be done with the whole thing. He must study the first principles and be familiar with their application to all kinds of heating work before he can correctly ask the question he wants to have answered."

HAS BUILT A NEW STORE.

Samuel Hobbs, hardware merchant, King street west, Toronto, has completed the erection of his new store. He is now fairly well settled in his new premises and when he has his stock arranged just as he desires he will have one of the most attractive stores in that city.

BURGLARS IN A HARDWARE STORE.

Burglars secured entrance into the hardware store of Bradfield Bros. & Co. by a rear window. The burglars succeeded in blowing off the vault door and also the outside door of the safe, but stopped in their work, probably fearing detection, as they had made considerable noise setting off four charges. There was only a small amount of money in the safe, although it contained many valuable papers. An adze and sledge hammer, the property of the G. T. R., were left in the store. The only articles missing are two revolvers.

A meeting of the creditors of Z. Forget, general merchant, North Temiscamingue, will be held on April 9th.

HEATING AND PLUMBING

STRIKE PROSPECTS IN MONTREAL.

IT is much to be regretted that the indications seem to point to a tie-up of building operations in Montreal this season by strikes. Active operations have been hindered by the lateness of the season and a great deal of work which should now be well under way has not yet been commenced. It is deplorable that some of the union men seem determined to select this season to go on strike.

A strike in one department of the building trades is quite sufficient to tie up the other departments, or at least to seriously inconvenience them. Perhaps with the idea of beginning at the foundation the Stone Cutters' Union has been the first to make trouble. The cause of the trouble is the refusal of the Granite Cutters' Employers' Association to recognize the union demands for shorter hours, increase of wages, and limitation of the quantity of work to be done in a day. Apparently the union seek to restrict the amount of work to be done and also to exercise a strict control of the apprenticeship system. The employers have refused to be dictated to in this manner and have announced their intention of maintaining open shops. They refuse to recognize the union in any way and assert their right to engage non-union men. It is the old, old struggle of the union to exclude non-union men from employment. To the outsider, it seems that the union has been unfortunate in its choice of an issue, for unquestionably the weight of public opinion is in favor of the maintenance of the "open shop." The public do not take kindly to the idea that in order to get employment a man must be compelled to join a certain society.

This one strike is sufficient in itself to inconvenience seriously the building trades, but it is feared that it is but the commencement of a wider struggle between capital and labor in Montreal, which will put a complete stop to building operations this season. The sheet metal workers and roofers are pressing their demands for a nine-hour day and payment at the rate of 25 cents per hour; the carpenters are clamoring for the same concessions.

The trouble between the master plumbers and the journeymen's association has been referred to before. The master plumbers are determined that they will not recognize the union, but will deal with their men individually. Some of them are reported to be willing to grant the demand for 25 cents per hour and an eight-hour day, but all are united in their determination in no way to recognize the union. They have signed an agreement to that effect which was published in these columns some time ago. The bricklayers also seem determined to make trouble, as they have given their employers notice that after May 1st they will require 45 cents per hour and a nine-hour day.

The Builders' Exchange, which includes all the contractors and employers in the building trades, has refused to recognize any of these demands, and it seems likely that the first of May will see trouble

Contractors are placed in a very hard position. Many of them have bargained to do certain work calculating that wages would be as before. To pay a higher rate means serious financial loss and in some cases ruin. Many of them prefer to default the contract and pay a forfeit rather than go ahead and pay ruinously high wages.

The men are really cutting their own throats, although most of them fail to see it. There is no doubt that the cost of living has increased enormously in Montreal and some of them are in serious straits. But the principal increase has been in house rents, and this increase is due to the scarcity of houses caused by the tie-up of building operations in former years. To hinder building during 1904 is still further to aggravate the present difficulties, to say nothing of the loss of wages which few of them can afford to lose. The great majority of the building permits issued in Montreal in the last year have been for houses for the workingmen, and while the rent of these houses is so excessively high, it is surely suicidal policy to prevent the erection of more.

Building Notes.

Quite a number of new buildings are going up in Crowland, Ont.

Tenders are being asked for additions to the drill hall, Brantford, Ont.

A new ten room school building is to be erected on Grafton street, Halifax.

It is understood that the Montreal postoffice is to be enlarged in the near future.

The Government is considering the erection of a new central postoffice in Montreal.

Stobart, Sons & Co., Winnipeg, are going to construct a factory on Cumberland avenue.

John Galt is planning the erection of a $25,000 residence on Roslyn Road, Winnipeg.

D. McBride, Hamilton, will erect 18 modern brick dwellings on John and Simcoe streets.

stores underneath and three floors of offices above. It will be 105x45 feet and will be of white brick.

Foster & Clark, architects, are asking for tenders for erection of a brick residence in Owen Sound.

Tenders are being asked by James Fowley, North Bay, for the erection of a new Methodist church.

The Nova Scotia Telephone Co. are about to erect a two storey addition to their building in Halifax.

H. L. Willson, Winnipeg, intends putting up a four-storey block on the corner of McDermot and Albert streets, having

The Seamen's Mission, St. John, N. B., have in contemplation the erection of a new and up-to-date mission in St. John.

D. F. Allman, Winnipeg, is contemplating the erection of a three-storey block on Main street. It will be 28x122 feet, with 2 floors of offices.

Arrangements have been completed to go ahead with the construction of the new Manitoba Club, Winnipeg. The new building will be on the southeast corner of Broadway and Fort street.

The Presbyterian church in Charleston, Ont., are erecting a manse in connection with the church, and tenders are now being called for by Rev. S. R. Robinson, secretary of committee.

Geo. Persechini is building a $20,000 dwelling on Cumberland avenue, Winnipeg. D. Bruce & Co., and Waller & Howell have the contract. The plans call for electric lighting and steam heating.

G. A. Gordon has the contract for a residence for the principal of Pickering, Ont., Ladies' College. It will be a four

The Gurney-Massey Co., Limited,
MONTREAL.

storey addition to the college building.

The Toronto city architect recommends a new pavilion at Allan Gardens, at a cost of $60,000.

Building operations are fairly active in Victoria, as stores and dwellings are at a premium. P. B. Brown & Co. will build a 60x60 ft, three storey block, at a cost of $15,000, on Fort street. Many new permanent sidewalks will be put down.

The Home Mission Board of the Baptist Church have decided to build new chapels at the following places: Milberta, Hudson and Harley, in the Temiskaming District; Barwick, in Rainy River District; Thornbury, in the Owen Sound District; and at Haliburton. At Hespeler the chapel will be enlarged at a cost of $2,000.

Among the large buildings to be erected at Guelph this season are: The block at the corner of Cumberland avenue and Carlton street, facing Central park. The structure will be three storeys high and will contain seventeen five-room apartments, every room of which will have direct light. There will be a central court with a balcony running around each flat and stairways leading to the basement laundries. The plans have been prepared and tenders for construction work will shortly be invited. It will cost $40,000.

Mr. W. L. Matthews, manager of the C. P. R. hotels at Banff, is in Montreal engaging help. He states that an exceptional amount of building is being done this Spring at Banff. The boom is on and over $400,000 will be put in construction this season. This includes a bath house which the Dominion Government is erecting at a cost of $16,000.

wood working plant of C. Kloepfer, collegiate institute extension, Guelph foundry, Murton's mill, European hotel.

The Sovereign Bank will, about May 1, begin the erection of a ten storey office building on the lot recently purchased by it on St. James' street.

It is expected that there will be a boom in building dwelling houses this Summer in Hamilton. The Eastern Building Co. intend to put up 100 houses in the eastern part of the city. D. Kelly will put up five brick houses on Ashley street. Crawford Bros. are erecting three houses on King street. Poag Bros. are going to build two brick houses on Westworth street, and N. Havill has prepared plans for two stores on Barton street.

Smith & Sharpe, contractors, Winnipeg, will this year erect an apartment

Notes of the Plumbing Trade.

A. R. Wilson & Co., plumbers, Sherbrooke, are offering their business for sale.

Robert Paterson, plumber, Toronto Junction, has started excavation work for a new store.

Joseph Wright, of the Bennett & Wright Co., and the Dominion Radiator Co., has bought two "Winton" automobiles, one a runabout, the other a touring car.

Toronto master plumbers state that the possibility af a strike in that city is as great to-day as it has been at any time this season, and that is saying a great deal.

Building Permits.

TORONTO.

Mrs. E. A. Mosher, a two-storey roughcast dwelling on Salem avenue, to cost $1,300.

DEVELOPING FURNACE TRADE.

IT is not necessary to suggest to many hardwaremen the possibilities of the furnace trade. They have devoted considerable energy to this phase of their business and have found it an excellent one in many ways. This applies to dealers in the cities, the towns and the villages in about equal degree.

The enterprise of the furnace manufacturers is a material factor in making this line such a good one for their local agents. Recognizing, on the one hand, that the retail hardware merchant is, more than anyone else, in direct touch with the operations of builders and contractors and that, on the other hand, many of them are not technically able to furnish the builder with the necessary details of cost, the furnace manufacturer has perfected an arrangement which reduces to a minimum the labors of the agent, yet leaves him sufficient proportion of the profit to induce him to be on the alert for furnace business.

The arrangement is simple. The local agent, if he hears of a proposed new house, tries to induce the owner or builder to instal a furnace or, if he thinks a customer might be induced to discard a stove for a furnace, tries to get an order for one.

If he is not able to take measurements and do all necessary figuring correctly, he makes a list of "prospects." When this list is large enough the manufacturer's representative is sent to him and together the local agent and the traveller visit each "prospect" and close a sale with as many of them as possible. Then if the local dealer is not able to instal them the furnaces are put in place under the direction of the manufacturer's representative.

Thus, it will be seen, the retailer can depend on all needed help at every turn and if he is always on the alert he can secure a good return from this line within the year.

Another factor which should be considered by those contemplating taking a furnace agency: The furnace, despite its heavier first cost, is much more economical than the stove, and is steadily winning a more extended popularity with the trade. The coal furnace is attracting favor especially in districts where wood is not as plentiful as in former years.

Some retailers have followed up the development of a good furnace trade by handling coal and have worked the two lines to excellent advantage.

PROFIT IN STRUCTURAL STEEL.

THERE are hardware merchants here and there in the various cities and towns in Canada who are willing to take up any line which will bring them in a profit and which at the same time will not be detrimental to their regular lines of business. It is to these men this article is addressed. There are hardware merchants who only sell the articles their customers demand and fail to recognize that it is their duty to a large extent to create the demand. By pointing out to a customer that his neighbor's property has been greatly improved by the recent application of paint, by giving an example of a house in which the wood is rotting for want of a coat of paint to protect the wood from the wet, by offering some such suggestion very often a good sale is made. The progressive hardware merchant must take the initiative.

But what has this to do with structural steel? So far we have dealt only with conditions well known to most merchants. There are not many merchants who have not suggested to their customers that an application of paint would be a good thing; or that an investment in a lawn mower would pay them in the satisfaction they would experience in having their grounds neat and well trimmed, but unless the writer is greatly mistaken there are many to whom structural steel is a line that has been overlooked.

The hardware merchant sells the majority of articles used in construction or repairing of a building.

Why should he not sell the structural steel?

Can you think of any reason why he should not? We can give you a number why he should.

In the first place he will not have to carry a stock. It will only mean an outlay of two cents to write to a firm who are in a position to follow up the information you give them. The manager of the Hamilton Bridge Co. told the writer all they wished the hardware merchant to do was to find out that a certain builder would require structural steel for the erection of a new building or the repairing of an old one. Send them this information, and if they succeeded in getting the order the merchant would be given a very liberal commission.

Another reason is that no technical information is required. It is not necessary for you to even quote prices. The Hamilton Bridge Co. are prepared to attend to all matters of detail.

Then again the hardware merchant is usually one of the first men to know of any building operations which are about to be commenced, as he is in close touch with the architect and contractor.

The important thing is to get after the order as soon as possible. The order will not come to you; at least not till it becomes known in your own and in the surrounding towns that you are after orders of this kind.

The Hamilton Bridge Co., of Hamilton, would be glad to furnish any of the trade with complete information regarding commission allowed and how the hardware merchant can secure this commission.

THE ASPHALT TRUST'S WORK.

The New York Tribune says: "Newspapers and advices received here from Caraccas show that there is much excitement at the seat of the Venezuelan Government over alleged aid given by the asphalt trust to the Matos revolution, which was put down about six months ago. President Castro has declared that he has proof that agents of the Bermudez Company, now a part of the asphalt trust, aided Matos in his revolution, while the claim of the company was being contested in the courts of Venezuela. He has declared that agents of the company offered about half a million dollars to him to have the courts declare in favor of the concession by which the company gained rights in the asphalt beds of Bermudez Lake, and that when he rejected the offer the company, through its agents, used the money inciting the revolution, in an effort to overthrow the Government. President Castro has caused suits to be begun for the abrogation of the concessions granted to the Bermudez company. If these suits should prevail, the recent decision of the supreme court of Venezuela in favor of the asphalt trust would go for naught.

"No officer of the asphalt trust could be found in this city last night to comment on the news from Venezuela. Gen. Greene, who formerly was president of the trust, was said to be in Canada."

HOW YOU AND WE MAKE MONEY

—We want orders for Structural Steel, for Steel Frame Buildings, Roof Trusses and Bridges.
—You put us "next" to any job you know of in your section requiring Structural Steel.
—We send a man after the order.
—You get a nice commission if we get the business.
—Let us join hands.

THE HAMILTON BRIDGE WORKS, LIMITED

Long Distance 'Phone, Hamilton 630. HAMILTON, CANADA.

Sheet Metal Building Materials.

The Pedlar People, Oshawa, Ont., issue a catalogue with which every hardware retailer in Canada should be familiar. The work is devoted exclusively to sheet metal building materials and covers the line most comprehensively. The first part of the book is comprised of full page illustrations of churches, stores, halls, and other buildings which have been fitted with Pedlar materials. Following these are illustrations of beautiful designs of steel ceilings, side walls, wainscotings, panels, friezes, dados, coves, borders, mouldings. Another division of the book is devoted to art architectural metal work, in which are illustrations of sheet metal statuary, stamped centre pieces, ornamental friezes, panels, etc., crestings, scrolls, leaves, ornaments, figures, brackets, capitals, finials, terminals, garlands, festoons, wreaths, urns, balls, balustrades, etc. Another important feature of the book is the department devoted to steel roofing and siding, corrugated iron, metal lath, eavetroughs, conductor pipes, etc. This department covers in a thorough manner the use of metal shingles, tile roofing, expanded metal laths, skylights, metal fronts for stores, residences and other premises. Any hardware dealer who has not secured this catalogue but is desirous to look into the sheet metal business thoroughly, should write for a copy. Those who have secured it should study it carefully themselves and then pass it on to their tinsmiths (the apprentices as well as the workmen) that they may better understand the advantages of sheet metal building materials.

A NEW RETAIL FIRM.

A new general store, whose hardware department will be of considerable importance, is to be opened on the first of May in Ste. Genevieve de Batiscan, P.Q., by St. Arnaud & Duval. The buying office of this firm is at St. Arnaud Freres, 425 St. Paul street, Montreal, and wholesale houses and manufacturers might send their price lists, catalogues, etc., to this address.

BAILEY CUTLERY STOCK.

The stock of the Bailey Cutlery Co., of Brantford, has been sold to John Riach, of Hamilton.

The Bailey Cutlery Co. made a very superior line of cutlery but were unable to manufacture this at a profit owing to the high price they had to pay for steel.

Any of the trade who wish to complete their lines of Bailey Cutlery Co.'s goods should correspond with Mr. Riach. Although the quality of the goods is not at all impaired Mr. Riach is prepared to sell them at a discount. It is no secret that cutlery has stiffened in value during the last few months, and may take another jump in a short time.

REPRESENTATIVES:

CLARE & BROCKEST, Winnipeg. ELLIS & GROGAN, Calgary.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

THE Hamilton & Toronto Sewer Pipe Co., Limited, Hamilton, Ont., have been incorporated with a capital of $50,000, to manufacture and deal in sewer pipe, brick, terra cotta, contractors' and builders' supplies, etc. The directors are J. H. New, J. T. Locke, J. W. Rose, all of Toronto; T. H. Graham, Inglewood, Ont.; George Lynch-Staunton, Hamilton.

Graham Fraser, general manager of the Dominion Iron & Steel Co., says that the wire rod mill is now practically completed and that the company are only waiting for completion of the billet mill to begin turning out rods. The billet mill will probably be in operation in a few days.

A dispatch from London, Eng., says that Dr. Haanel and his party of Canadians, who have been in Europe investigating electric smelting systems, sailed for home on Wednesday. They expressed great satisfaction with the results of their mission, having found in France a smelting plant working successfully as well as economically.

The Petrie Company, which was burned out in Guelph recently, is desirous of erecting its plant in Ottawa for the manufacture of dairy implements, and has asked the city for a loan of sixty thousand dollars, in return for which it promises to furnish employment to a large number of workmen. The application has not yet been considered.

The Leroy Automobile Co., Berlin, Ont., have decided to locate their new factory in some place other than Berlin.

J. M. Reid, Western manager of the Ontario Wind Engine and Pump Co., Toronto, has arrived in Winnipeg, and is already busy preparing plans for the erection of a new warehouse for the company on Chamber street. Building operations will commence almost immediately.

A mining man and capitalist of Seattle is going to build this Summer at Valdez, Alaska, a thoroughly up-to-date smelter of the largest size. In this new smelter it is the intention to incorporate all the best methods in use in the coast smelters. The Valdez smelter will treat the ores of the whole Alaskan coast, it is said, and the company have been assured of sufficient business to keep their plant running almost indefinitely.

A new industry is to be established in Galt. It will be known as the Galt Art Metal Company, and will manufacture metal decorations for offices and stores. Among those interested in the industry are: Hugh McCulloch, Sr., David Spiers, F. H. Hayhurst, T. Smith, Jos. Stauffer, W. H. Lutz and A. R. Goldie, all of Galt. This company asks no concession from the town. The new factory will be convenient to the Great Western Division of the Grand Trunk and the C. P. R.

The Fort Steele Prospector says that a company is being formed and preparation being made to establish on Perry Creek, B. C., a logging and lumbering enterprise larger and better equipped than any yet undertaken in the Kootenays. The system of logging will be the same as that used on the coast. This is a system of logging engines with cables and rigging to "yard out" the logs. Railroads will be built into all accessable places and the logs hauled to the mill on logging trains.

Geo. White is building a new planing mill on River street, Parry Sound. The mill will be up-to-date in every respect.

A. M. Graham, the new superintendent of shops of the Dominion Iron & Steel Co., has undertaken his duties. The new superintendent is a brother of Gordon Graham and a nephew of Harvey Graham of the Nova Scotia Steel & Coal Co. He has had a long experience in the iron and steel business in the United States, and was previous to accepting the Sydney position general inspector of the Lackawanna Steel Co., Buffalo.

The Western Counties Iron & Steel Company, Sydney, N. S., which was incorporated two years ago with a capital of $3,000,000, is to begin shortly the development of the iron ore districts at Torbrook, in Annapolis county. These areas they estimate contain in the vicinity of 300,000,000 tons. The company have also under contemplation the erection of blast furnaces at Parrsboro, or near there, utilizing coal from the Springhill collieries in their coke ovens. Later on they may undertake the manufacture of steel. For the present, however, they will confine themselves to the mining of iron ore on an extensive scale.

Good progress is being made in the installation of the $150,000 coal and coke plant for the International Coal & Coke Co., at Coleman, Alberta. The plant is designed to maintain an output of 2,000 tons per day, and within three months one-half that output will be maintained. A larger tonnage cannot be handled until the tipple and remainder of the surface plant is installed. A considerable portion of the machinery has arrived and the remainder is in transit. The completion of the first battery of ovens will be undertaken as soon as the frost leaves the ground.

Notes.

The coal output of the Sydney mines is on the increase.

The town of Wingham has passed a by-law granting a loan of $10,000 for the establishment of an upholstering and furniture factory there.

Andrew McCormack, Ottawa's veteran lumber operator, has purchased from the Quebec Government 130 square miles of limits situated on the height of land and about twenty-five miles above the head waters of the Ottawa.

Engineers are now locating the positions to run slopes for the new colliery at Big Glace Bay, N. S. The work of erecting buildings in which to carry on operations incident to the development of the new areas has commenced.

Dundas & Flavelles, Limited, Lindsay, Ont., have been incorporated with a capital of $100,000, to manufacture and deal in all kinds of merchandise. The directors are: J. D. Flavelle, W. Flavelle, and Wm. Dundas, all of Lindsay.

The Belleville Chronicle says that the Belleville Portland Cement Co. are showing great activity at their works at Point Arm. A large number of hands have recently been taken on, and several new buildings are in the course of erection.

O. B. Graves, Limited, London, Ont., have been incorporated with a capital of $20,000, to carry on the business of general house decorator and dealer in wall paper, etc. The directors are: L. B. Graves, L. H. Graves and E. O. Graves, all of London.

A company is to be formed in Ottawa to establish in that city a plant for the artificial manufacture of ice. The reason for such a step is that some trouble has been had with the ice cut from the river on account of impurities, probably being polluted with sewage.

The Empire Wall Paper Co., Limited, Toronto, have been incorporated with a capital of $50,000, to manufacture and deal in wall paper of every description. The directors are: G. W. Adams, Syracuse, N. Y.; H. C. Jarvis and S. Johnston, both of Toronto.

3 in One

Oilright for delicate mechanism, guns, bicycles, etc. "3 in 1" is the ideal lubricant for all oiling purposes. Will not gum, thicken, turn rancid or collect dust. Cleans and polishes and positively prevents rust on metal surfaces in any climate or in any kind of weather, better than furniture polish for veneered and varnished surfaces. Sold by all the leading jobbers in Canada.

THE OFFICE

DEVOTED TO THE OFFICE STAFFS OF BUSINESS ESTABLISHMENTS

A PERPETUAL INVENTORY FOR A RETAIL STORE.

TO know just how a business stands, says a writer in System, a perpetual inventory of stock is necessary. A card, similar to Figure 1, is used for each article in stock and is headed with the name of the article. Below this is kept a record of the goods received, with the date and quantity, and a record of the goods issued or disbursed and the balance on hand. This gives a perpetual

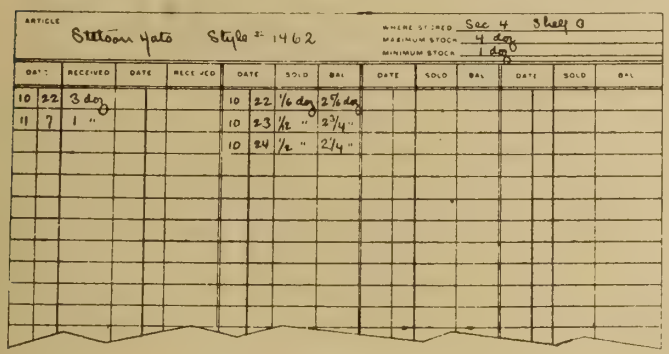

Fig. 1.

inventory. If desired, the cards may be arranged to show the names of concerns from which the goods are purchased, with the prices, so that the cards will show not only quantities, but the values of the stock on hand.

For each article in stock a maximum, normal and minimum limit should be established. These limits should be entered on the space provided for the purpose at the head of the card, so that the cards will always indicate when goods should be ordered.

The cards should be arranged according to the class of goods, first dividing the stock into its various classes and arranging these in alphabetical sequence. A half-cut centre projection guide card is used to indicate each

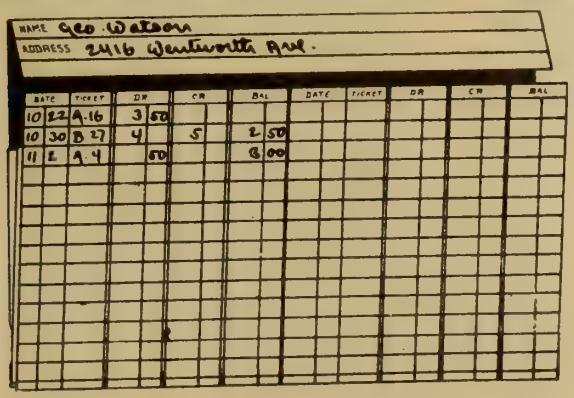

Fig. 2.

class. In front of these guides the stock cards are filled either alphabetically or by sizes, depending on the nature of the stock.

These stock records may be easily kept by the cashier, as the sales in the different departments may be tabulated on a sheet as the sales slips come in.

In this connection we call your attention to a very simple system for keeping our credit accounts. This is a folder system, using a 4x6-inch folder, as shown in Figure 2.

Instead of copying the items from the duplicate sales tickets, the total amount of the ticket is entered in the debit column on the outside of the folder, the date and ticket number being given. The tickets themselves are then filed in the folder. This makes a filing system and ledger combined. The folders are filed in a regular card drawer, indexed with alphabetical guides.

Two sets of guides are used to separate the open and closed accounts. When an account is paid or balanced, the folder is transferred to the division of paid accounts. Here it is indexed in the same manner as in the first division, so that if the account is reopened the folder may be readily located, and may be used until the space is entirely filled up.

With this system but one copy of the items is necessary, and that when the charge ticket is made out or the order taken. If a customer calls at the store to settle his account, the original entries may be shown him. This makes a satisfied customer, as there is no possible chance for a dispute when the customers see the charge slips themselves. In case an itemized statement is necessary, this can be made out from the charge slips themselves as quickly as though the items were entered on the ledger page.

CORRESPONDENCE RESPONSIBILITY.

UPON those who dictate the correspondence rests a still heavier responsibility, says Profitable Advertising. This is entirely too big a subject for casual comment.

It is one of the greatest fields in any business for the exercise of intelligence and tact.

Not only one's familiarity with the business itself, but one's whole knowledge of men and affairs is called into play.

A man can go on for a lifetime perfecting himself in such work.

In handling a large correspondence constant self-discipline is required to give the dictation life and interest.

The tendency is to degenerate into a mere machine, to use stereotyped forms and phrases.

Most business men seem incapable of putting their own personality into a letter, unless they are angry.

When a man is angry he should call his stenographer and dictate freely all that he feels inclined to say, have it carefully written out, read it thoughtfully, and then tear it up. It gets the load off his chest, and at a later hour or the next day he may be better qualified to do himself justice.

No outward expression of a business is of more vital consequence than the mail that goes out every day; what is said and the way it is said. The spirit of your business is sure to show in your correspondence.

THE MAIL ORDER BUSINESS.

AN interesting phase of the development of the mail-order idea, remarks Profitable Advertising, is the opportunity offered persons with very little capital to go into the business. There are many manufacturers who will furnish printed matter for distribution and fill all orders received, thus obviating the necessity of paying out money for preliminary advertising matter or for stock. The initial expense, then, is merely the cost of postage, which may be made as much or as little as convenient.

It is doubtful, however, if experiences of this sort prove satisfactory. Simply sending out a few batches of printed matter will not establish a paying business, and unless one has some practical knowledge of successful methods of promoting sales he had better think twice before taking this "short cut" to riches.

The mail-order business is a very attractive proposition, but, as in every other enterprise, brains, energy, money, and time are required to make it successful.

A QUESTION OF ARRANGING ACCOUNTS.

The Business World recently published the following from a reader: "The writer desires an opinion on a much disputed question, and the matter is left to you for final decision.

"The subject at hand is one of averaging accounts. The facts are as follows:

"A purchases various bills amounting to $5,185.79 on terms of sixty days, 7-10. These purchases average due May 9. Prior to maturity of these purchases the following partial payments on account are made:

January 3	$1,000
January 9	500
January 23	500
March 17	1,000
May 6	1,000

"On December 12, A settles the above account, deducting cash discount on the total purchases, and tenders B his check for $700 in full settlement, less interest of $23.50, or a net check of $676.33. At the time of sending the check for $676.33 he deducted thirty days' interest, and the $676.33 is supposed to represent the net balance due at date of December 12.

"B maintains that the check of $676.33 did not settle the account, but left a balance due (owing to him), A having deducted too much interest for anticipation. The dispute arises on what constitutes the balance of account.

"A maintains that the balance of the account is the amount due after all discounts were deducted.

"B states that the discount does not enter into the question of average, but that the balance in averaging the payments should be the amount before the discount is deducted, viz.: $1,055 and not $700. As this makes a difference of some days I would ask your respected opinion on same. Trust that you will answer this through the columns of your paper, as it will interest many."

LOOSE LEAF PRICE BOOK.

The Loose Leaf Price Book advertised by Hart & Riddell, Toronto, in this issue will be found useful to salesmen, order clerks, buyers, travellers, and in many departments of wholesale and retail houses. Prices can always be kept fresh, clean and up-to-date. Any page of old prices can be removed and new pages inserted in an instant. The Tengwall price books are flat opening, the sheets lie perfectly even and can be written on from edge to edge. By simply pressing the covers back any single or number of sheets may be removed or inserted quickly and easily.

The real opportunity for self-improvement is not in the city or the country, or anywhere outside of you; it is in yourself. The initial impulse, or motive power to do or to be, must come from within or nowhere.—Success.

Paterson's Wire Edged Ready Roofing

has successfully stood the test of Canada's variable climate for over twenty years, and is the only popular substitute for shingles.

We are advertising the above Roofing extensively in the "Farmers' Magazines" and in all cases we ask prospective customers to order our goods from their local Hardware Merchants.

There will be a very large quantity of our Ready Roofing sold in the future, and you can't blame us if you don't get your share of that trade.

U. M. C. NEW PRODUCTS.

The .32 Automatic Colt Pistol Cartridge is loaded with a special high power smokeless powder, giving high velocity and operating freely through the mechanism of the Automatic Colt Pistol (pocket model). Those with the soft point bullet will be found desirable for sporting purposes, and those with metal case for military and target use.

RIM FIRE CARTRIDGES

The U. M. C. .22 automatic rifle (Winchester model 1903) cartridge is now ready for the market. New .22 short ungreased, 22 long ungreased, and .22 Winchester inside lubricated are inexpensive rim fire cartridges loaded with the best grade of smokeless powder. Boys are calling for these cartridges, as they can be carried loose in the pocket without the old inconvenience of the greased cartridge. They will not lead the gun. "U. M. C. Ammunition shoots well in any gun."

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

"THE REAL" SAFETY RAZOR IS A SELLER

OUR CONDITIONS ARE: Give to likely customers to try and if not absolutely satisfactory return it.

AGENTS FOR CANADA:

RICE LEWIS & SON, Limited, Toronto.
CAVERHILL, LEARMONT & CO., Montreal.

A New Kind of Razor

You'll be surprised at the way "The Real" Safety Razor shaves—*different* from any other razor.

It shaves clean and keen—smooth and easy.

It doesn't pull or break hairs.

"The Real" is the only perfect razor for *self-shaving*.

The *rigid handle* and the *anti-cut guard* make it better than the ordinary razor—*better control of the blade* on *face, strop* or *hone*—*quicker work* possible—*no cutting*.

It's better than other "safety razors" because it's a *razor*—not a hoe. Made of the *very finest* razor steel—*full concave*—2¼ in. blade.

GEO. W. KORN RAZOR MFG. CO., Little Valley, N.Y., U.S.A.

CANADIAN CORDAGE & MANUFACTURING CO. LIMITED

PETERBOROUGH, ONT.

MAKE THE

FINEST BINDER TWINE IN CANADA

ROYAL BRAND.

There are many Brands of Binder Twine but "Royal" is the

BEST.

MANY Manufacturers of Binder Twine give names to their various Twines, but we have but one Brand, the "Royal," and we sell our Twine according to Length. If you want 500-foot Twine, ask for "Royal 500"; if you want 550-foot ask for "Royal 550"; also for "Royal 600" and "Royal 650." You thus see that we sell you exactly what you pay for and not a high-sounding, meaningless name.

Every Ball of our Twine is Guaranteed to be of Superior Quality, and

We Stand Right Back of our Guarantee.

GET OUR PRICES BEFORE PLACING ORDERS.

Just like fishing

Building up trade is just like fishing.

If you use the right kind of bait and cast your line where the kind of fish you want are most plentiful, you'll quite likely get a number of bites.

Then if you go about it right you are pretty sure to land most of them.

Apply the illustration to business.

If you want to catch the hardware trade, cast your line where all the good hardware merchants in Canada congregate every week—looking for bait to build up their businesses with—in HARDWARE AND METAL. But

Suppose results don't come at fust
What be yew goin' tur dew?
Take out yewr ad, and kick yewrself,
An' go ter feelin' blew?
Uv course yew hain't; yew're goin' tew fish,
An' bait an' bait again;
Bimeby some nibbles 'n bites 'll come,
Then yew'll pull 'em in.

Our Department of Advertising Service is now providing good bait for a number of our advertisers—and stands ready to help a few more in this connection.

Drop us a line about it.

ONEIDA COMMUNITY

(Established 1848)

Largest manufacturers in the world of steel, weldless chain in a variety of links.

As a halter chain they are without an equal, as they possess the exclusive feature of a patented lock ring, which enables the animal to be instantly tied "short" or "long."

Unexcelled for Cow Ties, Dog Leads and Fancy Chains.

In use by all the leading railroads in the U.S. as Pin Chains and for other purposes.

A favorite with the manufacturers of all agricultural implements and makers of windmills. A list of these users would include all the best known firms of the U.S.

Also well adapted to use for padlocks, sewing machines and every purpose for which chains are wanted.

Exported in large and increasing quantities.

KEMP MANUFACTURING CO., TORONTO, CANADA.

How A Country Hardwareman Won Success

By D. O. M., Toronto.

IS there scope for an ambitious man's energy and enterprise in a hardware and metal business in a small town or village? Hundreds of young men in Canada have asked themselves this question.

Many have answered it in the negative and have made their way to the cities, to be engulfed in the maelstrom of life and activity there. After a number of years a persistent and capable struggle against the stern competition of city life has landed a few of these in a position where their strength and courage are recognized and where scope for their loftiest ambition is provided. Many less capable or less persistent have been "swallowed up," their individuality practically lost and eventually their ambition dissipated.

Others have answered the question in the affirmative and have bent their energies, their force of brain as well as of body, to make themselves a power in their town and to get for themselves a share of "this world's goods" which will compensate them for the energy and ability they throw into their work.

W. H. Morrison, hardware, stove and furniture dealer, Shedden, Ont., belongs to the number who have determined to win success in a small place, and he is steadily progressing toward the end he has in view.

Mr. Morrison, after an apprenticeship as tinsmith and some years of work at that trade in St. Thomas, Selkirk and Fingal, Ont., started in business in Shedden, Ont., as a partner in the firm, Morrison & Risdon Bros., the other members of the firm being former employers who had such faith in him that they were ready to back him up in his desire to conduct a store. Mr. Morrison, as resident manager, threw so much energy and skill into his work from the start that in three years the business had so succeeded that he was able to buy out his partners' interests. From that day to the present he has steadily, persistently, sought to build up a business that would attract trade in competition with the stores in any of the large towns in the district.

The business at the start was a small hardware one, tinsmithing being an important feature. Mr. Morrison had learned this trade well and through his success at this work won the confidence of the people of Shedden and the neighboring country, and thus laid the foundation on which he has built up his present large business.

"To build up a business in a small village like Shedden," said Mr. Morrison, to Hardware and Metal, in a discussion of his methods, "one must first win confidence, then one must keep on extending the lines carried. In a city one might make a specialty of one line and build up a large business in that way, but in the country there is a limit to the possible demand for any one line.

W. H. Morrison.

Therefore, one must aim to carry as many lines as will add in some degree to his profits."

"What lines do you carry?"

"Well, I am a sort of general hardware dealer and home furnisher. I have now two stores. In one of these I carry general hardware and metal lines; in the other wall paper, house furnishings and furniture."

"Do these lines work well together?"

"Why, yes! When a buyer is after one of these lines he generally wants something of the other line. And by supplying such a wide range I am able to prevent the people from my section going to the bigger towns as they would surely go if I did not carry such a wide assortment."

"Do you still do outside work?"

"Certainly; it would be 'going back' to stop that work now. In addition to tinsmithing I now seek for business at eavetroughing, furnace work, metallic roofing, etc."

"Do you sell many furnaces to farmers?"

"I have made quite a feature of this. You know Western Ontario farmers have done well in the last six or seven years and are well able to fit up their homes in any manner likely to add to their comfort or convenience. They are learning to enjoy life and to appreciate the value of their time. So it has been good policy to talk furnaces to them. I make it a practice, too, to push coal furnaces. Wood is steadily becoming scarcer in our section and the farmers must soon turn to coal. Not only have I sold them coal furnaces but have followed up the matter by starting to handle coal. Now it is a familiar sight to see a farmer hauling home a load of coal from my sheds to his home.

"Another development along a similar line has been the increased sale of high grade ranges. Some time ago some man went around the country selling a high-priced malleable range. At the time I was annoyed to learn that several farmers in my district had bought these ranges. But since then I have become glad that they visited the locality. They did much to convince the farmers of the wisdom of paying a good price for a range and I have followed this up with excellent results. All this adds to my coal sales."

"Was it hard to work up a coal trade?"

No, though it was slow. I only bought one car at first. Now my sales are so steady that I frequently buy cars, bringing it in direct from Buffalo."

"Do you look after building operations to sell goods to builders?"

"I have to. In the first place I have my contract work to build up. In the second place I want to supply cement, nails, building materials of all kinds, paints, etc., to as many builders as I can. If one is to do this work to best

advantage one must be on the move a good part of the time."

"Do you try to influence the builders regarding how to build their places?"

"To some extent. For instance, if I think I can influence a man to use metal shingles instead of wooden ones I try to do so because I sell metal ones but not wooden ones. The same way with cement. If I can persuade a man to put a cement floor in his cellar or in his new barn I do so in the hope of selling him cement. This is fair because both metal shingles and cement are the best goods for their purpose and I am giving a man good advice when I tell him to use them."

"You carry wall paper?"

"Yes, I carry as large a stock of it as is generally carried in towns far larger in size than ours. This gives buyers confidence that they will have some variety to choose from and will probably be able to get what they want. Wall paper is a strong line with us."

"Do you push stock food and seed?"

"I have found stock food an excellent line in the Winter time; in the Summer I carry both garden and field seeds and always try to interest my customers in the line. There is money in both of these lines if they are properly looked after."

In addition to his activity Mr. Morrison has spent considerable time and energy in the service of his municipality. He served in the township council for five years, during which time he was elected three times by acclamation. For four years he represented the township in the county council, three years as deputy reeve and one year as district representative, acting as reeve in the township at the same time. He has also been an active worker in the Canadian Home Circles, the A. O. U. W. and the Independent Order of Oddfellows.

Personally Mr. Morrison is a genial, wide-awake man, fond of life and action, appreciates a joke and the grip of a friendly hand. As he is yet a young man he is likely to still expand considerably before he has reached the limits of the hardware business in Shedden.

"OUT-OF-DOORNESS."

THE word "Out-of-doorness" is one of those expressive words which are sometimes arbitrarily coined to fit an occasion. In this case the word was either adopted or coined by a big bicycle firm in Toronto and free use of it made in various advertising mediums. Now "out-of-doorness" and bicycle riding are synonymous terms. The movement for "out-of-doorness" in Canada is not so pronounced as in the United States, where it expresses a protest against indoor life, parlor exercises, prepared foods and artificial living in general. What goes through with enthusiasm in the United States generally works quietly along in Canada, and so we have a steady out-of-door movement in progress here. The immediate effect of it has been a marked revival of the bicycle trade.

PRESCRIPTION EXTRAORDINARY.

The somnambulist called on her medical man,
And told of her terrible case,
How every night 'twas her unwitting plan
To wander asleep round the place.

"'Tis a terrible thing, and I dread now to think
Of what might, p'r'aps, happen to me
Should I fall while walking the parapet's brink
In my 'nighty' at half-past three.

"You should know I have had these attacks for some years,
But lately much worse have they grown;
Oh, doctor, please cure me," she cried through her tears
And an alternate sigh and a groan.

"Be calm, my dear madam; now don't be unnerved,"
And then a prescription he wrote;
"'Tis 'homœopathic," the doctor observed,
As he handed the patient the note.

So she went to the chemist's, who said "It's not here
That you for this physic should hie;
For a hardwareman's shop you had better now steer,"
And she left without even "'Good-bye"!

At the hardwareman's place for the chief she did "ax,"
And he came from the back of the store,
And read, "For attacks take a dose of tin tacks,
And administer over the floor"!

THE BRITISH IRON INDUSTRY.

U. S. Consul Monaghan, Chemnitz, Germany.

UNITED STATES CONSUL MAHIN, Nottingham, Eng., reports as follows: The tariff commission appointed by Mr. Joseph Chamberlain to investigate trade conditions, in view of the alleged relative decline of British foreign commerce, has given out some statistical tables regarding the iron and steel industry of the United Kingdom. These include comparative figures from foreign countries. The facts disclosed by the tables are thus summarized:

At the end of the seventies the production of pig iron in the United Kingdom was equal to nearly 6,750,000 tons, representing 45 per cent. of the world's total production and equal to the total production of the next five iron-producing countries. At the end of the eighties the world's production had increased by 59 per cent. while that of Great Britain increased by 17 per cent., Germany and the United States having respectively increased this production by 93 per cent. and 175 per cent. The United Kingdom's share of the world's production had fallen to rather more than one-third, while that of Germany had risen to about one-sixth and that of the United States to about one-fourth. Early in the nineties Britain gave up the lead to the United States, which has continued to increase this lead during the last decade. Great Britain is now being further rapidly overhauled by Germany. The total production of the United States is now only just less than the combined production of the United Kingdom and Germany.

If we turn to the consumption of pig iron, the new century finds the United Kingdom third among the iron-consuming countries. Measured by any test that can be applied, either by comparing the production of other countries or by the consumption relative to the increased population, the same result is brought out, viz., that the British iron industry has remained absolutely stationary during the last thirty years as a producer, and, compared with the world's demand, has given up her supreme position and receded to a very backward place.

The results in the case of steel are, if possible, more striking than in the case of pig iron. While in the period 1876-1880 the average annual production of steel in the United Kingdom represented one-third of the world's total requirements, it now represents less than one-seventh. The United States and Germany are the only two countries whose production has increased more rapidly than the world's demand. The former has increased her proportion from about one-quarter to two-fifths; the latter, from one-sixth to more than one-fifth. According to one table, while the consumption of steel in the United Kingdom, per head of the population, has increased by 294 per cent., the corresponding increase for the United States and Germany is 981 and 1,026 per cent. respectively. The relative slothfulness of the steel industry in this country is thus again demonstrated.

CATALOGUES, BOOKLETS, ETC.

For the convenience of its readers HARDWARE AND METAL has opened its columns for the review of catalogues, booklets or other such publications issued by manufacturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. It is requested that when any of the trade write for any booklet mentioned in these columns that they credit HARDWARE AND METAL as the source of their information.

The "New King" Cooker.

THE Fairgrieve Mfg. Co., Toronto, are offering the Canadian trade the "New King" steam cooker. To help the retailer in introducing this cooker to householders the company have prepared an attractive 28-page book containing valuable recipes by famous authorities on cooking by steam, also full information regarding the cooker prepared in such an attractive manner that women should, after reading it, be easily convinced of the advantage of having the "New King." Readers of Hardware and Metal who have not given this cooker attention should secure a copy of this booklet and see from a perusal of its pages if this line would not be a good one to add to their stock.

Acetylene Apparatus.

There is as much difference between different acetylene generating apparatus as there is between clerks in a hardware store. The faults of some acetylene machines have been so much in evidence that many merchants are dubious about their use. Yet this is as unfair as it would be to assume that because two or three clerks had been caught stealing all clerks were thieves. For this reason the St. Thomas Acetylene Mfg. Co., Limited, St. Thomas, Ont., have prepared an exhaustive booklet on "High Grade Acetylene Apparatus" for distribution to interested parties. This booklet covers the situation in a thorough manner and should be sufficient to convince even the skeptical as to the accuracy of the claims made for their machine. On one page is a letter from Alf. W. Hadrill, secretary of the Canadian Fire Underwriters' Association, as follows: "This is to certify that after examination by our inspector your 'Star Water Pressure Acetylene Gas Machine,' constructed in accordance with the plans and specifications fyled in this office, has been accepted as fully complying with the standard requirements of this association, as per revised rules of March 1, 1899." This book should be read by hardwaremen, particularly those engaged in the plumbing or tinsmithing branches of the trade.

Oil Engines.

Merritt & Hatcher, Limited, Poultry, London, E. C., have issued a valuable treatise on oil engines—their selection, erection and correction, by W. A. Tookey, author of a similar work on gas engines. The book is divided into four parts and an appendix. The introductory chapters—Part I.—deal successively with petroleum fuel, the advantages of oil engines, definitions of the various terms of horse power, and explanation of the principle of work or cycle of operations. Part II. is for the information of purchasers. It describes and compares the different methods adopted by the leading British manufacturers in the details of design, and includes a few hints to assist in making a selection. Part III. is written more for the workmen who instal and foremen and others who superintend. Part IV. is for the attendant. It contains a few words about starting, probable failures and defects and their remedies, and some hints that may prove useful. An appendix is added whereby the different designs of the leading manufacturers can be easily compared, and it is hoped that the descriptions there given—in each case the brief notice has been approved by the makers themselves—will form a useful guide to those interested in the subject. The price of the work is 1s. net at London. Mention this paper in writing.

Planers and Shapers.

The London Machine Tool Co., London, Ont., have issued a valuable catalogue dealing with "Planers and Shapers." In their introduction to the work they say: "We have endeavored to pick out the salient features of these machines so that the reader can see at a glance the care taken on every detail of construction, note how every stress is provided for and also note their general handiness of operation, their simplicity and strength. We have been building these tools for twenty years, have placed them in hundreds of shops from the Atlantic to the Pacific and are very much pleased at their record for steady, true and accurate work. The modern high speed steel has of late been making demands upon machine tools for higher cutting speeds and also heavier and wider feeds. We have constantly endeavored to keep well abreast of the improvements of the times and believe that after a careful perusal of this pamphlet the reader will acknowledge that we have succeeded well. Our works are situated close to the various railways entering London, and we will be pleased at any time to show visitors through our works, show them our methods of construction and other matters of interest. We would be pleased to give further particulars of our machines, if such is desired by any of our customers. We also manufacture a complete line of machine tools, generally, such as lathes, radial drills, plain drills, presses, punches, rolls, steam and board-lift hammers, boring mills, etc., and will be pleased to furnish any particulars of these machines."

A Plain Talk to Paint Dealers.

For more than ten years we have talked to you in these columns of *THE SHERWIN-WILLIAMS PAINT AGENCY.*

We have constantly urged its many advantages and good profits; we have truthfully endeavored to show the exceptional opportunities it offers in the paint field; and have pointed out its great value as an advertising help to the dealer.

We have succeeded in convincing most of you that our statements are truthful. But there are a few whom we have not won over. If you are one of the few, we want you to know that *our 1904 proposition* is better and more liberal than ever before. It is bringing more business and better business to *S. W. P.* agents.

We want to show you "why." We can prove to you that the agency will bring success to any dealer willing to take hold and use the helps we give—that our advertising sells paint—that our products hold trade.

We want you to investigate our proposition—to consider it carefully. You can learn all about it by writing today for Booklet "B 13."

MACHINERY

THE MACHINERY MARKET.

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, April 21, 1904.

GENERAL machinery business is not quite so active this week as last. Actual business is not so large and inquiries have fallen off considerably. Whether this is only a temporary reaction or whether it indicates a permanent change it is impossible at present to state with certainty. The machinery market for the first three months and more of 1904 has been as fickle as the weather and in great measure has been affected by the weather. There have been weeks this year in which business has been brisk and in which the prospects seemed to point to a continued improvement; but taken as a whole, the opening months of 1904 have been disappointing. Results have not come up to expectations and the volume of business for the first quarter shows a considerable decline as compared with the same quarter in 1903. It is true that there are a number of large contracts in sight, but they have been in sight for months and they do not appear to be much farther advanced than they were a year ago. Several times lately, local machinery houses have congratulated themselves that these contracts were practically within their grasp. For some reason they have been disappointed in almost every instance.

Whatever the reason, it is pretty generally recognized by machinery men that buyers have not sufficient confidence in the market. Various reasons are suggested for this prevalent feeling of uncertainty, but the general opinion seems to be that it is one of the penalties of being so close to the United States. It is argued that there is nothing in our own trade conditions to affect the machinery market adversely; the sole reason is the uncertainty in the United States machinery markets. One local machinery man who has been in business for a quarter of a century ascribes the present state of affairs to the fact that this is Presidential year across the line. The Canadian market is always affected by the condition of the American, and a Presidential election does not help to maintain confidence in the future of any market.

Trade during the week has been confined entirely to small lots of saw mill supplies and a few small engines and boilers.

Ontario.

Office of HARDWARE AND METAL.
10 Front street east.
Toronto, April 22, 1904.

The continued backwardness in the Spring machinery business has undoubtedly had a depressing effect on machinery dealers in all lines.

There is no particular dullness in any line. The orders which do come in are well assorted, but in few cases have they been of any magnitude. Moreover, the number of them have not been as large as desirable or as anticipated.

It is expected, however, that the Summer will bring some heavy buying in both iron-working and wood-working machinery. The fire in Toronto this week is looked upon as likely to cause a good demand for power and transmission equipment of all kinds, but it is not likely to seriously effect the general machinery trade.

Railway Extensions in View.

SEVERAL railways are seeking charters in New Brunswick this year.

The New Brunswick Central, with $100,000 capital (all U. S. capital) and head office at Coal Branch, propose to build a line from Coal Branch to Richibucto, also to Chipman, thus reaching the properties of the Canadian Coal and Manganese Company, and the New Brunswick Coal and Railway Company. The company also proposes to engage in coal mining and shipping.

The Herring Cove Railway, with $25,000, is projected to run from Alma to Herring Cove, two miles, to give the Hillsboro Mfg. Co. access to deep water terminus.

The New Brunswick Consolidated Railway propose to construct and operate lines from Beersville to Buctouche and from Adamsville to some point in Queen's County. They also desire to absorb by purchase the Beersville, the Kent Northern and the Kent Northern Extension railways. The N. B. Consolidated has at its head Dr. Hugo Von Hagen and his associates of New York, favorably known in connection with the Beersville railway and coal mining enterprises.

The Twin Free Mines Railway project a line from Twin Free Mines, near Great Falls, on the Nepisiguit river, to Gloucester Junction. Work shall be begun within two years and completed within six years after the granting of the charter. The company is capitalized at $190,000.

The Tobique and Campbellton Railway Company are after a charter. They propose to build and operate about forty miles of railroad, from a point on the Tobique Valley Railway between Reid's Island and Plaster Rock, crossing and re-crossing the Tobique river until it intersects the Restigouche and Western Railway. The capital stock is $40,000 with an authorized bond issue of $10,000 per mile. Among the incorporators are J. F. Tweeddale, M. P. P., James Burgess, M. P. P., Donald Fraser, Archie Fraser and H. A. McKeown.

Superior Brand Horse Rasps.

The Nicholson File Co., Dominion Works, Port Hope, have recently added the "Superior" brand horse rasp to their extensive line of files and rasps, with a view of meeting the demand for a lower price rasp. The discount on this brand to the retail trade will be 75 and 10 per cent. from the standard list. These goods will be labelled Nicholson File Co., and fully warranted.

The Nicholson Co. report an increased demand for their goods since April 1st. On account of the severe weather during January and February they were compelled to close down a portion of their works for the want of coal and crude oil. The equipment of their Dominion works is such as to enable them to produce both files and rasps equal in quality to anything manufactured on this continent, and they are at the present time working on some large orders for export to Great Britain.

SMALLEY MARINE GASOLINE ENGINE.

THE Smalley marine gasoline engine shown in the accompanying illustration, is meeting with favor in the United States and is now being introduced to the Canadian market by the Fairbanks Company. It is a small gasoline engine designed for use in pleasure boats and launches.

The Smalley engine belongs to that type of internal combustion engine known as "two cycle," that is, the piston is driven forward on the initial stroke by the explosion of gas at each revolution of the engine. The makers do not claim for it that it is the most "simple" engine on the market—at least not in the ordinary understanding of the words. They make use of valves and working parts where experience has proved them to be essential to the efficiency of the engine. There is a point in the manufacture of gas engines beyond which simplicity can be carried at the expense of efficiency.

A successful working gas engine must of necessity be constructed with a precision nothing short of perfection. The correct location, form and area of admission and exhaust parts, the size and lift of valves, the area of compression space, are all matters which only extended experience can bring to perfection. These are points which often escape the notice of the casual observer, but which are by far more important than the most elegant exterior finish. In the design of the Smalley engines attention has been given first to these details although appearances have not been neglected.

Each crank shaft is made from a solid piece of the best forged steel; cylinders are bored with the utmost accuracy by machines constructed for this special purpose; all connections, pins, etc., which are encased and out of sight, are given the same careful attention as the exposed parts. The shaft journals are made of copper-hardened metal and are perfectly reamed and fitted. The cylinder head, as well as the cylinder body, is thoroughly water-jacketed and water is supplied to same by means of efficient pumps. Thousands of dollars have been invested in special tools, jigs and templates, so that all parts can be exactly duplicated.

The method of speed regulation is worthy of special attention. All Smalley engines are equipped with a speed regulator or throttle. The speed of the engine can be controlled in an instant by merely throwing the lever which is attached to top of cylinder head. This device appeals at once to the operator and it works so perfectly that any desired speed can be obtained, from full speed to a dead stop.

With this regulator it is not necessary to reverse the propeller when making a landing. Everything can be done with the throttle, and you thereby do away with unnecessary strain on the boat and shock to your passengers by suddenly reversing the engine when under full speed.

The operating of this lever does not in the least change the quality of the gas, but merely decreases the amount of gas admitted to the combustion chamber by gradually closing the opening made by the inlet valve.

The speed of the engine can be perfectly controlled by operating the small lever which regulates the time of ignition, hence the speed of the engine is at all times under the immediate control of the operator, whether his position be either forward or aft of the engine.

The reversible propeller equipment of the Smalley engine is also deserving of special attention. If any part of the equipment of the engine has called for more praise than another, that part has been the reversible propeller. The Smalley engines run in one direction and the reverse motion is imparted to the propeller by means of a mechanical arrangement which enables the operator, by means of the reversing lever, to change the pitch of the propeller blades to "back up" or "go ahead." By means of the same lever the blades may be set in a neutral position, so that the engine may be run without imparting either a forward or a backward motion to the boat.

All parts of the Smalley propeller are mechanical and strong and completely encased, so that the wheel presents the same solid appearance as a solid wheel. (See the illustration.) Note that there are no nuts, bolts or lugs to catch weeds or other obstructions, or to cause an undue resistance to the water. The entire thrust of the propeller is taken up by a ball thrust bearing, which reduces the friction to a minimum.

THE LODGE & SHIPLEY LATHE.

THE Lodge & Shipley Machine Tool Co., Cincinnati, Ohio, make a specialty of high-grade lathes. They are at present offering the Canadian trade, through the representative, H. W. Petrie, Toronto, a lathe which contains several features which render it capable of great volume of work at high speed.

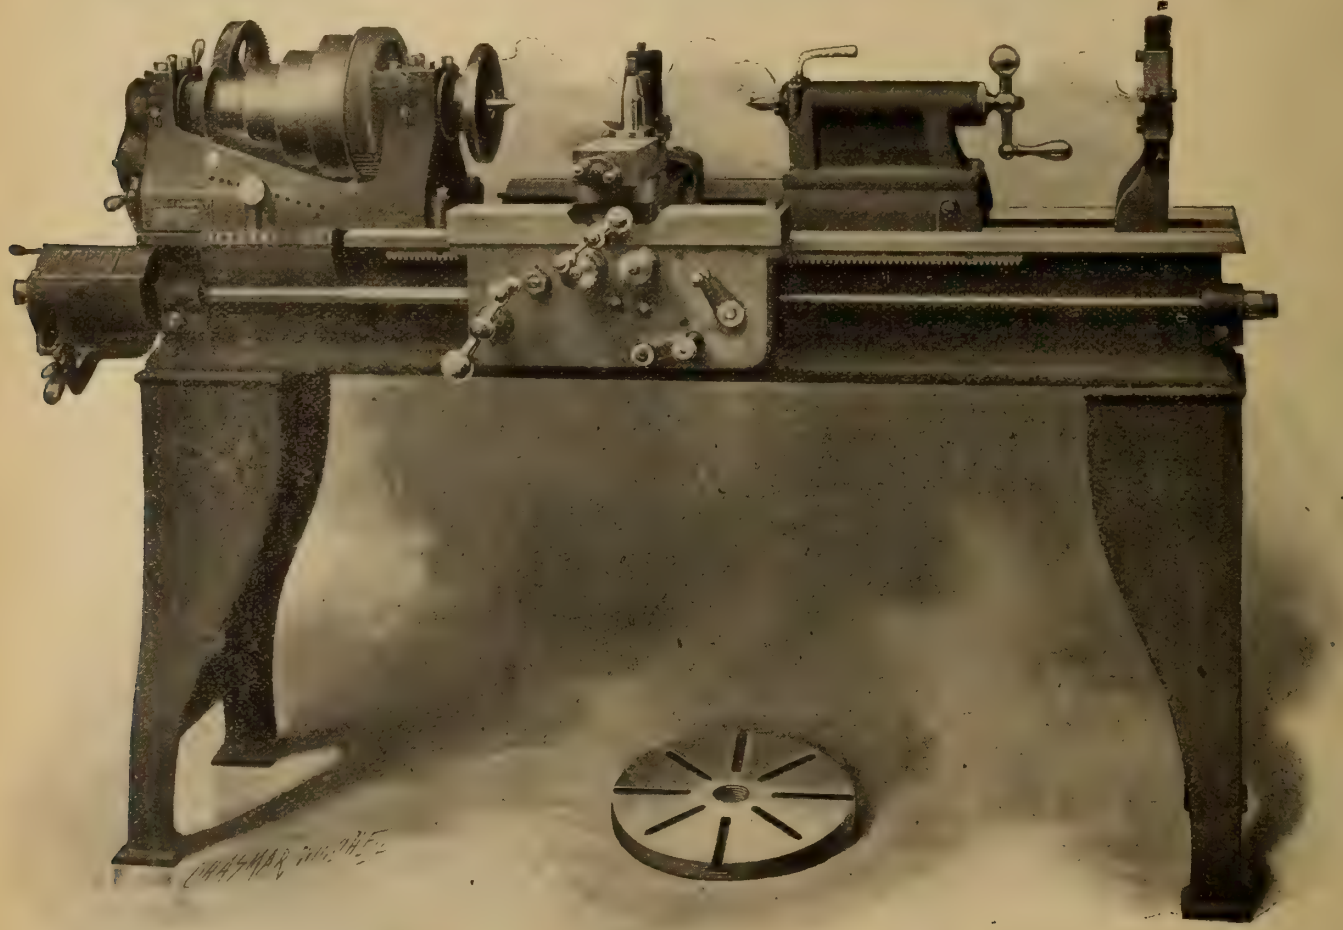
A description of the lathe is furnished below:

"The head is neat but massive, the cone pulley has five steps, the faces of which are extra wide, and the ratio of back gearing is very high. The spindle is of crucible steel, with a large hole through its entire length. The bearings for the spindle are of the best quality of composition metal, and are massive both front and back. In order to insure its being absolutely round and straight the spindle is ground. The thrust collars are of steel, hardened and ground. Suitable screws are provided for setting the tail-stock sideways, and a 2-inch index graduated to sixteenths of an inch is cut on.

"The carriage is extremely heavy and substantial, is provided with liberal Tee slots, and is gibbed to the bed its entire length. The bearing on the bed is not recessed, but has a full bearing from end to end, and the entire depth of V on the bed. Instead of an inside V at the front of the lathe a flat is used on which the carriage bears; this shortens the "bridge" of the carriage and insures a solid and substantial bearing immediately under the compound rest. The carriage is provided with a screw and clamp for locking it while using the cross-feed.

"The compound rest is substantially built and is in keeping with the balance of the lathe. Both the upper and lower slides are fitted with taper gibs, which, with a long movement for angles, is fitted with a screw of suitable pitch. This screw is provided with an indexed micrometer, which reads in thousandths of an inch. When starting the cut an exact diameter may be obtained without the use of calipers by using the tail-stock spindle as a gauge. For example, in the 18-inch lathe, secure the tool firmly in place, move it forward until the point touches the spindle; the tool is then set to turn a diameter of spindle size. If smaller diameters are wanted, move forward by means of the micrometer, the required distance, as explained. If larger diameters are wanted, move backward in the same manner, except that in moving it backward it should be carried say a half turn more than required, and then sent forward to the proper place, in order to take up the lost motion.

"Compound rests are furnished regularly on 22-inch and larger lathes; smaller lathes are furnished with compound, raise-and-fall, or plain rests.



Especial care is taken to face the point with which they come in contact, so that the bearing is absolutely true. The gears, with the exception of the spindle gear and the back gearing, are steel and are actuated by the gear shown on the outer end of the spindle.

"The tail-stock is shaped so that the compound rest may be set at an angle of 90 degrees, which permits the tool to be operated on the smallest diameters. besides being tapering, are tongued and grooved into the sides, so that no amount of strain will displace them. The taper gibs are provided with two screws only, one front and one back, which take up the wear the entire length, and which will not require resetting, perhaps, more than once a year. The top slide is of ample width, so that heavy cutting may be done without projecting the tool out away from the tool rest. The top slide

"The apron is fastened to the carriage by hexagonal-head cap screws, besides being tongued and grooved into the carriage; it is of ample length, width and thickness, and is provided with three heavy braces along its entire depth. The studs are steel and are hardened and ground, and the pinions for cranks, friction, cross-feed, and rack are all of steel. The reverse for the feeds is extremely simple, and is always at the

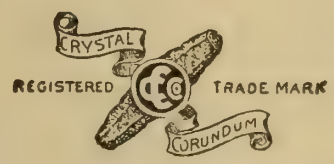
Craig Mine Corundum.



Corundum is the best abrasive obtainable. It cuts clean, fast and cold. Not until three years ago when Craig Mine Corundum was placed on the market, could corundum be obtained in quantity. We can now supply any quantity of uniformly pure and carefully sized corundum, and enquiries and orders will receive prompt and careful attention.

Send for our booklet.

The Canada Corundum Company, Limited

TORONTO, CANADA.

hand of the operator; the lead screw passes through the sleeve and engages with it by a spline and key; this key extends almost the entire length of the sleeve, the edges of the spline are carefully dressed, and there is no possibility of any cutting. The movement of the reverse handle on the apron causes the bevel gears on the sleeve to engage either on the right or left, and feeds the carriage accordingly. When the handle is locked centrally it is impossible for the feed to become engaged. The threads of the screw are never in use, except when the lathe is cutting screws.

"The half nuts, cut from the solid metal, are planed to fit directly into substantial bearings in the apron, take prompt hold on the carriage, are entirely independent of any cap screws, and are in no danger of being twisted out of alignment under heavy pressure; they are operated by a cam, with carefully milled grooves; this forms a substantial combination which will outwear the other parts of the machine and will never cause trouble. Our device connects a cam with the reverse lever, which cam is thrown in the path of the half nuts when open and feed is engaged, so that the half nuts cannot be closed until feed is thrown out. The friction cross-feed is so designed and constructed that if the cross-feed is allowed to run beyond its limit either way no harm will be done.

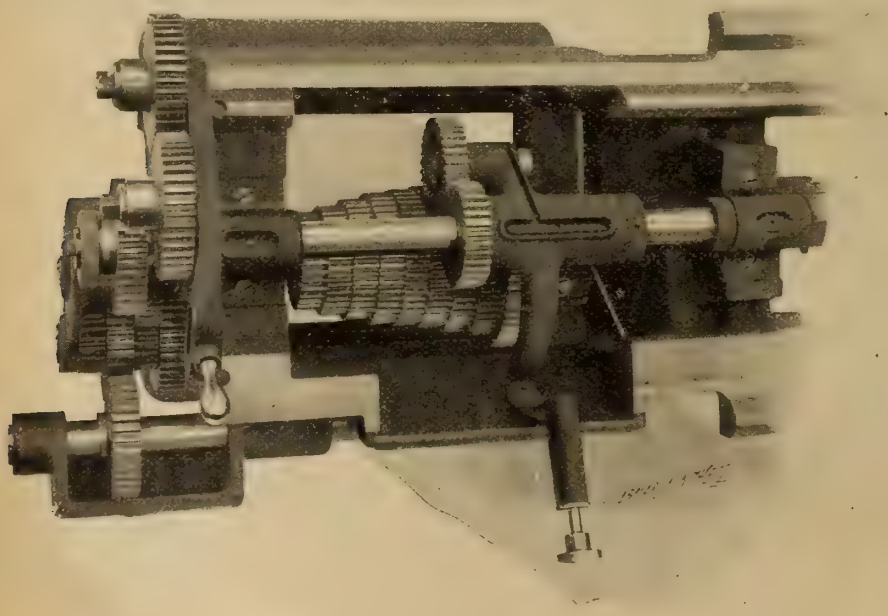
"We desire to call especial attention here to the indexed apron crank shaft for internal work. Suppose a hole should be counterbored to a given depth and diameter, the depth may be read by the index on the crank shaft instead of measuring off by a scale, and a diameter for counterbore may be made by reading the cross-feed screw index. In chasing internally this not only prevents the breaking of tools, but gives an exact diameter. All parts are easily accessible to oil.

"The bed is designed with ample depth and proper width and bracing. The surfaces to which the lead screw bearings are fastened, are planed to receive them, are tongued and grooved and are in perfect alignment. The tops of the V's are rounded to avoid bruising. The racks are of steel accurately cut and in one piece (excepting on long beds).

"On lathes of 22-inch swing and larger, a rack is cast in the centre of the bed (see illustration) into which a pawl at the back of the tail-stock engages. This provides a positive brace for the tail-stock, the advantage of which, especially when the lathe is engaged on heavy work, is apparent to every mechanic.

"An improvement of substantial merit (patented August 13, 1900) is the ledge, a steel strip let into and securely fastened to the front of the bed and upon which the back plate or bracket of the apron slides. The inner ends of the pinions and pinion studs have a bearing in this plate or bracket, affording a substantial support upon the bed directly in line with the strains which might tend to separate the gears or rack and pinion while under a heavy load. Applied on 22-inch lathes and larger only.

"The screw-cutting feature of our lathe has many points of excellence. All gearing is cut from solid metal. The change gears are mounted on a short shaft (the bearings of which are ground), running in substantial bearings in the bed directly under the headstock. The knob shown in front of the head carries a gear that continually runs either right or left. This gear may be dropped into any one of the cone of gears instantly, and thus gives four times as many changes as there are gears in the cone of gears, because on the outer end of the cone-gear shaft are four gears, into any one of which the gear shown on the lead screw may engage. Not a single gear need be removed to obtain the different threads or feeds on the index.



Gear in a 22-inch bed.

"Provision is made on the reverse plate of each lathe to receive a compound gear, so placed as to cut either a full column of finer threads or a column of coarser threads than shown on the index plates. This gear is only furnished regularly on the 14, 16 and 36-inch "Standdard," 36-inch "Massive," 42 and 48-inch lathes and set for the finer threads of index, excepting on the 36-inch "Standard." This compound gear can be furnished of a ratio suitable for any reasonable odd number of threads per inch, or for coarser fractional pitches. This plate is also used to change from right to left hand screw cutting.

"Triple gearing is a regular equipment of our 36-inch, 42-inch and 48-inch lathes, and can be applied to 24-inch, 27-inch and 30-inch lathes, if desired. The gears are powerful and massive, and are easily engaged or disengaged from the front of the lathe.

"The taper attachment, patented April 7, 1891, and November 9, 1897, is extremely simple, and composed of less parts than any other in the market. In operation it is changed from straight to taper by tightening or releasing one screw on the dog. When attached for taper work the sliding shoe connects directly with the tool rest and not with the screw, making its operation instantaneous. The nut is made to release and slide in a groove. The stud for the sliding shoe also engages into a groove, and to attach or detach requires nothing more or less than the releasing of one screw and tightening of another, or vice versa.

"The cross-feed nut cannot fall over when in use, as in the ordinary taper attachment, because it is never disconnected. The bolt simply slides in a slot (patented) in the compound rest slide. The bracket carrying the taper attachment is bolted to and travels with the carriage, so that at whatever part of the bed the carriage may be, the taper attachment may be instantly engaged. No planed strip is necessary on the back of the bed. For the convenience of customers, all carriages will hereafter be drilled so the taper attachment may be readily added at such time as customer may desire.

"The index plate has the words 'thread' and 'knob' on the upper line. Under the word 'threads' are the number of threads the lathe will cut—for the 18-inch lathe, from 2 to 32; under the word 'knob' are the figures 1 to 11; thus, should the operator desire to cut any certain thread, he finds the thread on the index plate, pulls the pointer to the column in which it is found, places the knob in the hole indicated on the plate, and starts his tool to work. This is so simple that the greenest boy understands it at once.

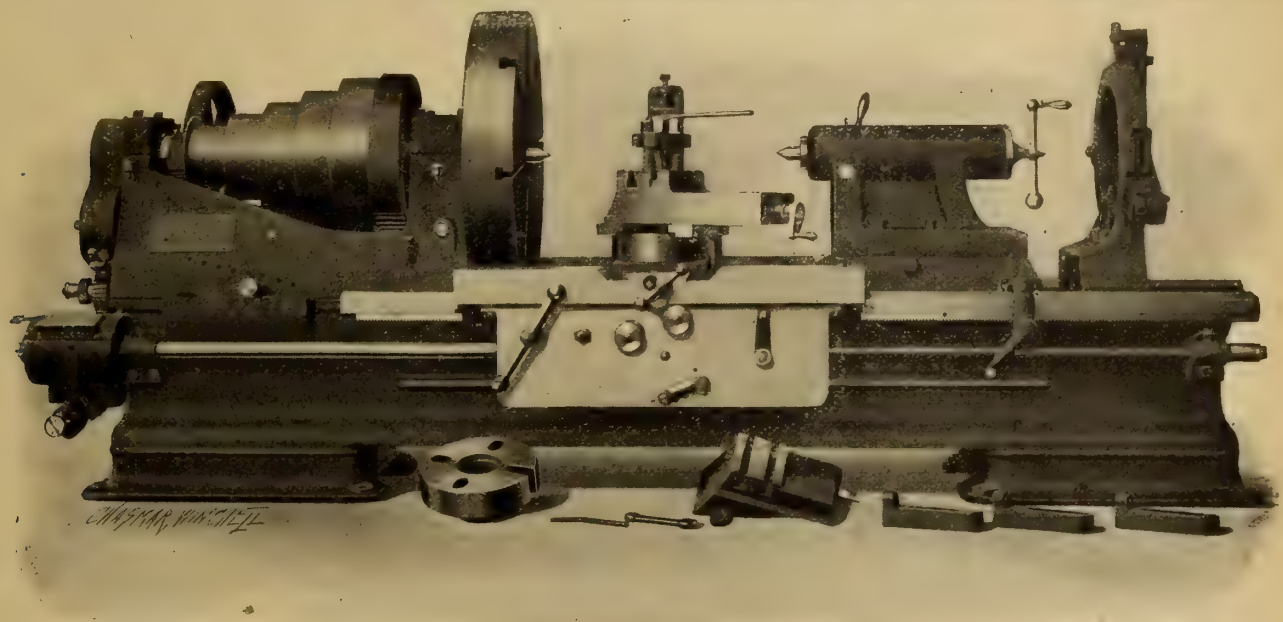
"The range of feeds is very great. On the 14-inch lathe, from 16 to 512; on the 48-inch lathe, from 3 to 84. The tool post wrench fits all hexagon head screws and nuts requiring adjustment.

"The follow-rest is quickly attached to the carriage and straddles it, so that the tool works exactly opposite to the

points of support, making it absolutely firm under the heaviest cut. It is provided with three jaws, adjustable to any diameter within its limit.

"All screws are accessible from the top with the tool post wrench.

"The countershaft is provided with a core pulley of larger diameters than the one on the spindle, in order to give ample belt power. This cone pulley is flanged at the small step. The friction pulleys have a lrage chamber to receive a full pint of grease. They are mounted on thimbles, upon which the pulleys revolve freely, the thimbles also revolve freely on the shaft; this doubles the life of these wearing parts, for if one part



36-inch Improved "Standard" Lathe.

should stick it will revolve on the other. The fingers which ride on the cone thimble are steel, are very carefully fitted, and are adjustable only at one point; a wrench is provided with each countershaft to make this adjustment. The frictions themselves are taper cones, of nearly as large diameters as the pulley, and which when released leave the point of contact a full eighth of an inch, absolutely avoiding the troublesome back and forward motion, so prevalent in friction pulleys when the machine is stopped. We will furnish tight and loose pulleys in lieu of friction pulleys and at same price when specified.

"Every lathe is fitted with follow and steady rests, plain or friction countershaft, large and small face plates, and necessary wrenches. Chucks are not included in the price of the lathe. These will be furnished and fitted at a reasonable additional cost."

Readers of Hardware and Metal are invited to send for further information regarding this lathe to H. W. Petrie, Toronto. Ask for catalogue "N" in which detailed illustrations of the lathe are given.

MACHINERY AND ELECTRICAL NOTES.

Alfred Rubbra, of the Machinery Exchange, Montreal, has secured new storage premises on St. Genevieve street. He is storing a number of boilers and engines, new and secondhand, in these new premises.

L. Martineau & Cie, biscuit manufacturers, 225 Dorin street, Montreal, intend putting in several thousand dollars' worth of new machinery this Spring. Several Montreal machinery houses are competing for the contract.

Kinney Bros, planing millers, Gladstone, Man., have purchased a site for a new mill. A patent gate is to be made. Machinery will be placed at once. Their present mill will be enlarged and new gas engines and planing machinery, making it as well fitted a mill as is in the country.

The Dominion Coal Co. have decided to start the work of opening Glace Bay harbor and Big Glace Bay mines. Materials are now enroute and delivery will commence in a few days; $85,000 will be spent on harbor improvements, $25,000 of which is furnished by the Dominion Government and the balance by the coal company. At one time over 250,000 tons of coal was shipped from there yearly. The port will be used exclusively for the loading of sailing vessels.

The Scottish Hero, one of the new chartered boats of the Dominion Iron and Steel Company, arrived last week from Glasgow. Her cargo consists of 800 tons of firebrick, 9,980 barrels of cement, and 370 tons of rails. The rails were manufactured in England from steel made by the Dominion Iron and Steel Company. They are to be sent to different parts of Canada to be tested on the great railways. The Scottish Hero is the first steamer to arrive in the port of Sydney this season.

Henry Gebeau, of Frank, N.W.T., has invented a "Grip Traction Motor" which he claims will revolutionize the haulage from mines. Its cable is stationary, the grips attached to a wheel clutch automatically the cable in a similar manner to a man climbing hand over hand; the grips revolving between two supports cams collars causes this climbing motion. The power for this machine may be generated either by storage battery, steam or gasoline engine and is transmitted to the grip wheel by a pinion and spun wheel.

The Kingston Locomotive Company have closed a contract with the Chambersburg, Pa., Engineering Company for the installation in the works here of a hydraulic riveting and flanging plant. It comprises a riveting machine of 150 tons pressure, a hydraulic frame, accumulator, flanging press and all the necessary pumps, etc. It will be one of the largest plants of its kind in the world, and will add greatly to the equipment of the works, and will permit of from 12 to 15 engines per month being turned out. The plant will be installed within the next seven weeks.

Byrad Warnock has succeeded F. H. Hayhurst as business manager of Jas. Warnock & Co., Galt, Ont. Mr. Warnock, who is a young man of excellent business ability, is a son of the late James Warnock, the founder of the works. Mr. Warnock is particularly well fitted for his new position, having had considerable experience in the spring and edge tool business. For some time he was connected with a carriage spring business in Michigan, and later was with an edge tool concern in Columbus,

Ohio. Besides getting a practical training at these places Mr. Warnock also got an insight into the business end.

The Brome Lake Electric and Power Company, Brome, Que., has decided to appeal from the judgment recently rendered by Judge Lavergne against the company in favor of Mr. Oscar Sherwood. The latter, who owns a water power sued the company for damages alleged to have been caused by the company holding the water by day and using it at night to operate an electric light plant. Judge Lavergne gave Mr. Sherwood $210 damages and the costs of the action, which are heavy. The company has decided to go directly to the Court of Appeal and the case has been inscribed.

The Winnipeg Street Railway Company have decided to make additions to the car storage capacity, the mechanical department, and the gas manufacturing plant. The last mentioned will be made modern in all respects. For this purpose several new buildings are to be added to the present establishment on Gladstone street. The new plant will have a capacity equal to the production of 500,000 cubic feet of gas per day. It will probably be ready for operation by the first of October next. All the new buildings which are to be erected by the company will be constructed of brick and steel, and they will not only constitute an important addition to the operating establishment, but will reflect no discredit on the locality in which they are located.

Willis Chipman, engineer, Toronto, is asking for tenders for the following for Moose Jaw waterworks and sewerage works: Contract "A," labor, pipe-laying on water works and sewers; contract "C," water tower or reservoir; contract "D," cast iron pipes and specials; contract "E," hydrants and valves; contract "F," sewer pipes and junctions; contract "G," pumping machinery; contract "H," two boilers; contract "J," electric lighting engines; contract "K," electric lighting system.

On Monday the Kingston Locomotive Works turns out an engine for the Prince Edward Island Railway. It will be sent to the St. Louis Exposition to be exhibited. The engine is a small one, and is the best piece of workmanship ever turned out by the Kingston company. It does twice as much as any other engine of its class. Several others like it are to be built at the horks there.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

AGENCY WANTED.

AN established Manufacturers' Agent in Montreal representing several large American houses, with representatives covering all Canadian territory, wishes to secure a good Canadian manufacturer's line in Hardware or Specialties. Address Box 102, HARDWARE AND METAL, Montreal. (20)

A PARTY at present acting as assistant manager for an old-established English hardware importing house, would like to obtain agencies for English, Canadian and American firms. Address "Agent," c/o. The H. R. Ives Co., Limited, Montreal. (18)

BUSINESS FOR SALE.

HARDWARE BUSINESS—About $4,000, in largest mining town in New Ontario. For particulars address Horne & Hardy, Copper Cliff. (24)

PLUMBING, tinsmithing and hardware business, established 1892. Everything must be sold at once. J. D. Murdoch & Co., Simcoe, Ont. (20)

FOR SALE.

TWO HARDWARE STOCKS in Manitoba; important implement agencies in connection; reason for selling, attention required to other lines; both good opportunities for money making; one stock will invoice about $5,500, other $2,500; good trade established and will bear investigation; write now. Marshall-Wells Company, Wholesale Hardware, Winnipeg, Man. (19)

ARTICLES WANTED.

WANTED—Good second-hand cornice brake; send particulars and price to G. A. McMurtry, St. Thomas. (18)

SITUATION WANTED.

AS HARDWARE CLERK—By young man of good character, with experience; references. Address Box 116, HARDWARE AND METAL, Montreal, Que.

SITUATION WANTED—As clerk in hardware store; five years' experience; good references. Address Box 127, HARDWARE AND METAL, Toronto. (18)

HARDWARE clerk wishes to obtain situation at once, either in Manitoba or the Territories; ten years' general experience, with best references. Address S. C. Wright, Milestone, Assa. (19)

SITUATION VACANT.

FIRST-CLASS salesman for retail stove business; a good position for one who understands the business thoroughly; give references. Box 124, HARDWARE AND METAL, Toronto. (17)

STENOGRAPHER WANTED—In Winnipeg wholesale house for correspondence, with experience in hardware invoicing; good opening for rapid operator; state experience and salary expected. Apply Box 125, HARDWARE AND METAL, Toronto (18)

STOVE manufacturer wants young practical man with experience to assist superintendent. Address. Box 126, HARDWARE AND METAL, Toronto.

WANTED—A boy with two or three years experience at tinsmith trade; please state wages and reference to C. B. Miner, Cobden, Ont. (19)

MACHINERY WANTED.

BOILER—30 to 35 horse power; hundred fifty pounds cold water pressure. Myers Co., Saulter street, Toronto. f

GASOLINE ENGINE — Second-hand, four horse. T. Riddolls, Drayton, Ont. f

MACHINERY FOR SALE.

GAS and gasoline engines; stationary, marine, automobile; also launches; silver medal, highest award Dominion Exhibition, Toronto; write for catalogue. The Gasoline Engine Co. of Toronto Junction, Limited. f

THE FAIRBANKS CO., 41 Front street west, Toronto; standard scales, valves, mill supplies, gas and gasoline engines, Fairbanks stationary, portable and marine; shafting, hangers, pulleys; all transmission appliances; write for price lists. f

WE build a full and complete line of high-class iron-working machine tools, in lathes, planers, shapers, drills, hammers, bolt cutters, etc.; at reasonable prices; inquiries solicited and full information given intending purchasers. The MacGregor, Gourlay Co., Limited, Galt. f

NORTHERN IRON WORKS, Winnipeg, manufacturers and importers of iron products, castings, machine work, structural iron work, pulleys, hangers, etc. Send for catalogues. f

PETRIE'S new stock list of machinery just out; send for one. H. W. Petrie, Toronto. f

THE Stuart Machinery Co., Limited, near C.P.R. station, Winnipeg—Forty-two steam engines, one to one hundred horse-power, in stock, new and second-hand; this we believe to be the largest and best assorted stock of engines in Canada, and our prices are right. f

ELEVATORS for freight and passenger service; write for particulars to Parkin Elevator Works, Hamilton, Ont. f

METAL PRODUCTION IN EUROPE.

SOME interesting statistics regarding the metal industries of Belgium, France and Germany are given in consular reports issued by the United States Government on April 16.

Consul Roosevelt, Brussels, Belgium, reports the output of cast iron in Belgium in the last ten years as below: 1894, 818,597 tons; 1897, 1,035,037 tons; 1900, 1,018,561 tons, 1901, 764,180 tons; 1902, 1,069,850 tons; 1903, 1,216,500 tons. The imports during the last three years were 165,766 tons in 1901; 291,886 tons in 1902; and 335,791 tons in 1903. In no year did the exports exceed 35,000 tons. Of finished iron and steel products the output was 870,200 tons in 1901, 1,106,950 tons in 1902 and 1,360,410 in 1903. The importation was from 80,000 to 95,000 tons per year. The output was taken about equally by the home and export demand, the figures being 476,138 tons exported and 484,672 tons used at home in 1901; 603,587 tons exported and 537,433 in Belgium in 1902; 738,988 tons exported and 716,118 tons in Belgium in 1903.

Consul Thackara, Hayre, France, reports the production of iron and steel in France, according to statistics of the Minister of Public works, as follows:

	1902. Tons.	1903. Tons.
Pig iron, refined	1,885,431	2,258,429
" foundry (first fusion)	419,543	569,239
Puddled, commercial	330,207	348,372
" sheet	39,613	36,056
Charcoal, refined	4,002	6,388
From scrap iron	265,849	205,115
Steel rails	273,812	234,494
Commercial steel	697,888	792,702
Sheet steel	274,106	290,204
Steel ingots	1,568,303	1,854,620

Consul Kehl, Stettin, Germany, in a report on the German pig iron industry, says:

The increase in the German production of iron and the export of articles made from iron is shown in the following figures:

	Production.	Export.
1903, tons	10,085,634	3,479,999
1902, "	8,420,660	3 309,007
1901, "	7 300,735	2,347 211

The above statistics show that the greater portion of the increase in the raw material is consumed by home manufacturers; but if the export to the United States decreases to any extent there will be a large surplus on hand - that is, if the production comes up to last year. The activity of German smelting furnaces will to a certain degree be controlled by the demand from the United States. The export in the three years was largely divided as below:

	1901. Tons.	1902. Tons.	1902. Tons.
Belgium	52,581	108,811	158,121
Denmark	496	1,438	2,378
France	32,024	30,387	32,532
Great Britain	28 931	39,954	23,157
Netherlands	2,416	89,928	41,105
Austria-Hungary	13,312	14,335	12,852
Switzerland	7,929	9,867	14,380
United States	5,939	49,506	128,980

ENQUIRY FROM NEWFOUNDLAND.

Editor Hardware and Metal:

You may be interested to hear that we have an application for prices in axes from a firm in St. Johns, Newfoundland, who mention they saw our advertisement in your paper. One has to exercise so much faith in advertising that it is pleasing to have at times such direct result.

THE DUNDAS AXE WORKS.

Toronto, April 20, 1904.

SITUATIONS VACANT.

WANTED — First-class hardware and stove salesman with two or three years' experience. Apply, with reference, and state salary, to Boxall & Matthie, Lindsay, Ont. (18)

LINDSAY, April 19, 1904.

HARDWARE AND METAL, Toronto.

Dear Sirs,—Having had several replies to our ad. in HARDWARE AND METAL of last week's issue, kindly discontinue same.

Yours truly,

BOXALL & MATTHIE.

We insert the above to advertise our Classified Condensed Advertisements, the rate for which is 2 cents a word, cash, with order. 1 cent a word for subsequent insertions.

Hardware and Metal

Montreal. Toronto. Winnipeg.

Burned Out in Toronto!

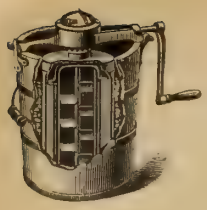
But not in Minneapolis, where our home factory is. This factory will run night and day to fill orders. The delay in filling orders for

INTERNATIONAL STOCK FOOD

will be a very brief one not more than a week. A carload of Food is already on its way to fill imperative orders. New Machinery has been ordered. The factory will be restored with all haste. Send orders as usual.

INTERNATIONAL STOCK FOOD CO.,

TORONTO, CANADA.



"White Mountain" Ice Cream Freezers

Made in eleven sizes with crank, and five sizes with fly-wheel.

These freezers make the finest and smoothest ice-cream the quickest.

Are built with triple motion, duplex malleable iron beater and strong waterproof tub.

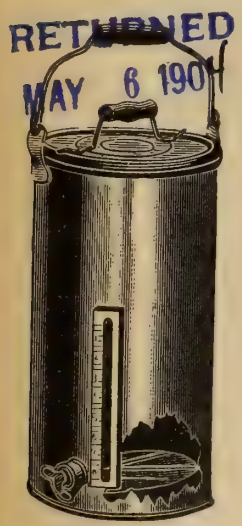
Bound with heavy galvanized iron hoops.

The best all-round freezers in the world.

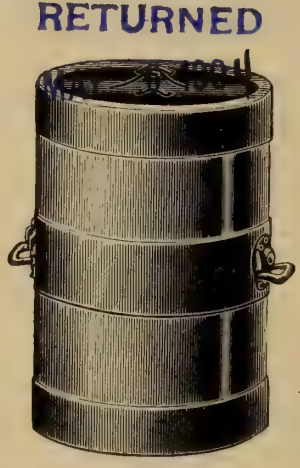
The McClary Manufacturing Co.

London, Toronto, Montreal, Winnipeg, Vancouver, St. John, N.B.

Sole Agents for Canada.

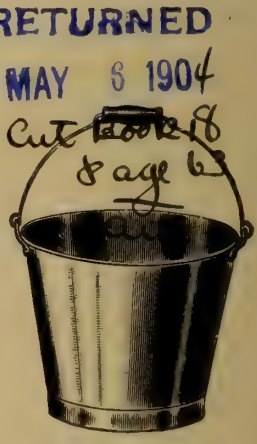


Creamery Cans



Milk Cans

Samson Dairy Pails



Dufferin Dairy Pails

The constantly increasing demand for these goods proves that they are of the very highest quality.

We can fill all orders promptly.

THE STEEL WIRE ROD QUESTION.

IT is easy to go to extremes and when one goes to an extreme it is easy to be unfair. A striking illustration of this axiom is given in the discussion by a section of the Canadian daily press, particularly in the Maritime Provinces, of the "fight against American aggression" by the James Pender Co., Limited, wire nail manufacturers, St. John.

A synopsis of the position taken by Mr. Pender, in standing out against the yearly agreement with the American Steel & Wire Co., was given by our Nova Scotia correspondent in last week's issue. In the daily press the affair has been so magnified that Mr. Pender has been exalted as a brave, patriotic Canadian fighting against great odds in the interest of Canadian industries. Those who are intimate with the circumstances, however, see nothing in Mr. Pender's action that particularly calls for admiration or applause.

To understand the circumstances it must be known that the agreement has been made between Canadian wire and nail manufacturers on the one hand and the American Steel & Wire Co. on the other hand, each year since 1899, except in the year 1900. In it the Canadian manufacturers (including the Pender company) undertook to purchase all their supplies of wire rods from the American corporation, in return for which the latter concern agreed not to sell the manufactured product in Canada. Each party sought its own advantage. The American corporation sought a monopoly of the wire rod trade and the Canadians were anxious to exclude a competitor who might be troublesome. Naturally the English and German mills with wire rods to offer did not regard the agreement with favor but up to the present no Canadian industry had any reason to complain.

Last September at a meeting between the Canadian manufacturers and the American concern to consider an agreement for the ensuing year a new condition had arisen. It was understood that the Dominion Iron and Steel Co. would be in a position to manufacture steel rods by May next. In view of this the manufacturers, in a desire to give the Sydney company every chance, refused to extend their agreement beyond six months. The Pender Company, having secured supplies enough to last them until the end of that term, was not party to this agreement.

During the first week in April, at the conclusion of the agreement, another meeting was held to consider a further agreement. The Dominion Iron & Steel Co. were still not in a position to manufacture or to promise regular supplies by a definite date. Moreover, wire rods to be imported from Britain or Germany would have to be brought in via St. John, which would entail excessive freight rates. With the exception of Mr. Pender the various manufacturers decided to continue the agreement.

Through it all, wherein has Mr. Pender shown especial courage or patriotism, such as he is credited with by a section of the press?

He himself gives as his reason for refusing to sign the agreement that he had been able, as a result of the destruction by fire of the Maritime Nail Co., to secure a stock of wire rods sufficient to keep his mill in operation until he could be sure of either Canadian or European supplies. Other manufacturers, not in a position to profit by disaster to a rival concern and not situated at an open port decided to continue the agreement and thus ensure the stability of the Canadian market by preventing the dumping of American wire and nails on this market.

Wherein, we repeat, has the action of Mr. Pender been more courageous or more loyal than that of other manufacturers? In the first place what courage is there in refusing to buy from one strong firm when one has a stock bought already and can depend on other strong sources of supply for future stock?

In the second place, what patriotism is manifested in a stand that has not in any way benefited any Canadian industry?

It will be found that when the Dominion Iron & Steel Co. are in a position to compete for regular business in wire rods on the Canadian market that they will have every legitimate support from all Canadian consumers of wire rods.

Hardware and Metal holds briefs for neither the American Steel & Wire Co. nor for the Canadian manufacturers of wire and nails who have been party to the recent agreement with that concern. But this paper holds that so long as the agreement has been in the best interests of the Canadian manufacturers party to it and so long as no Canadian industry has suffered from it, there is no reason for complaint or agitation against such an understanding.

When any Canadian producer of steel rods is in a position to offer regular supplies at competitive prices (which they are assisted to do by Government bounties) new conditions will prevail. Until such time it is idle and unwise to disturb existing conditions by a futile agitation against the producer of wire rods that is in the best condition to supply the market against the competition of the world. To exalt a manufacturer who, as a result of unusual conditions, is in a safe position to seek his own sources of supplies, for his courage and patriotism is unfair as well as unwise.

Self-preservation is the first law of nature as well as of business, and the Canadian manufacturers of wire and nails have only observed this judicious law in their relations with the American Steel and Wire Company.

CANADA'S UNDERPAID JUDICIARY.

PROOF of the interest taken in the agitation for more adequate salaries for the judges of the supreme court has been furnished Hardware and Metal in a remarkable manner since the publication of the article on the subject in last week's issue.

Several letters have been received on the subject from men well qualified to speak on it and whose views are well worthy of attention. These will be given in due time. It is manifest that Canadian business men realize that this subject is not one of moment merely to the legal fraternity. It is one that is intimately connected with so many transactions which affect industrial and commercial conditions in such a material degree that all business men whose operations or interests are of any considerable magnitude are keenly sensible of its importance and timeliness.

There is general recognition that it is of the utmost moment to the average litigant who cannot afford to pay the excessive fees which wealthy corporations are called upon to pay, that the ultimate court where the law is settled for all Canada, and the court which all the provincial courts must look to for their guidance, should be composed only of members whose judicial strength is such that no matter who the member of the bar may be who appears before them the court is not overawed by his presence and does not feel that the bar is superior in knowledge to the bench, the result being that the poorest litigant represented by counsel, who perhaps is appearing for the first time, is sure that whether his counsel takes all the points in his favor or not, the bench will be astute enough to appreciate every consideration and not be misled by the sophistry of the abler counsel.

This matter has been before the Dominion Parliament several times but in each case decision regarding the matter has been deferred. The interests of the business community, apart altogether from the injustice to the judges at present in office, demand attention to this matter. It is, moreover, imperative that attention to it be given at this session. Vacancies may occur at any time and the salary attached to the office should be at once raised to a level that would attract the most brilliant members of the bar. It should ever be the ambition, the great desire, of each member of the bar throughout Canada to attain, as a crowning end to his career, to a seat upon the supreme court bench.

The matter is of such magnitude that te refer to the financial aspect of it seems trivial. If the salaries of the supreme court judges were placed at a minimum of $12,000 per year for the puisne judges and $12,500 for the chief justice, it would only mean an increase of $30,000 a year, which is a mere bagatelle as compared with the importance to the country of having a court the decisions of which would command respect and confidence throughout the whole Dominion.

When one considers that the Government reports issued a few days ago showed a revenue of over $52,000,000 and a surplus over all charges of over $12,000,000 in the first nine months of 1901, the expenditure of $30,000 to ensure the maintenance of the highest possible standard of judicial strength in the supreme court of Canada is seen to be such a small consideration that the expense entailed will hardly be put up as an objection to the proposaf by even the least reasonable of its opponents.

Nor should it be necessary to consider the other objection which has been raised in the past, the necessity entailed of re-arranging the salaries of the judges in the other courts. The supreme court is essentially in a class by itself. It is not in a position similar to any provincial court since it is laying foundations for law throughout the whole of Canada, and since, as the country is growing by leaps and bounds at the present time this work is likely to be of the greatest importance within the next few years.

FRIENDS IN CALAMITY.

IT is seldom that a business community has to nerve itself to meet the effects of such a terrible conflagration as that which swept over Toronto's wholesale district this week and turned the premises and stock of more than a hundred and fifty firms into a widespread heap of ruins and debris.

The business men affected have faced the situation bravely and instead of the note of despair one might almost have expected one already hears the most encouraging reports of intended reconstruction and re-organization.

While the hardware trade has not suffered in anything like the proportion that several branches of the trade have the sufferers from the fire include wholesale hardware, paint, metals, stove and tinware, rubber and machinery concerns whose business interests extend over almost all Canada. In addition to these are many firms whose goods are handled by hardwaremen as well as by other retailers.

In view of the magnitude of the fire it is inevitable that many retailers will be put to some inconvenience. It is expected, however, that in such cases every consideration will be shown by customers of the sufferers, as such courtesy will in a great measure help the various firms to get their business into proper working shape again.

In this connection it is pleasing indeed to record the courtesy shown by firms who have long been keen competitors of those so completely burned out. Some concerns have offered their competitors in need such of their stock as may be needed for completion of orders until new stocks can be secured. In many ways a similar spirit of kindliness has manifested that the old-fashioned business principle of "hitting a rival when he is down" is not the fashion in Toronto at the present day.

A MENACE IN THE WEST.

WITHIN the next few years the character of the Northwest Territories of Canada will be formed for generations to come. Even to-day, influences are at work which will have their bearing on the future of the country. The importance of taking the utmost care in our dealings with the embryo provinces of the West will be readily admitted by every true Canadian.

The country is there to be developed, and it cannot be gainsaid that Providence has given to the Canadian people the task of bringing its vast resources to light and developing them for the advantage of all mankind. The land must not remain a barren wilderness. Its inherent riches must be exploited and to accomplish this task population must be brought to the Canadian shores and settled upon the vast stretches of unoccupied territory.

With this task the immigration authorities of the Dominion are endeavoring to cope, and with a fair measure of success, so far as numbers go. Statistics show that each year, increasing thousands of immigrants have arrived from Great Britain, Europe and the United States, and have been settled on the Western plains. And yet their coming has been but as a drop in a bucket. Still the call goes forth for more and more. The immigration agents are responding nobly and, if we mistake not, 1904 will witness a phenomenal influx of settlers.

It has frequently been pointed out by opponents of the Government, that there exists a tendency on the part of officials to sacrifice quality for quantity and that they imagine their obligation ends when they have placed another settler, good, bad or indifferent, on Canadian soil. This was particularly emphasized when the colonies of Doukhobors and Gallicians were brought to this country and settled in the West. Opposition to the Government's action was most pronounced at that time.

Without commenting on the wisdom or folly of this particular action of the Government, we would like to speak in general terms on the lamentable lack of foresight which has been displayed by the authorities in another direction. It would appear as if the Government were working entirely for the present, as if their instructions were simply to bring in so many settlers like so many head of cattle and dump them into the West; as if their salaries were in direct proportion to the number of immigrants landed at Canadian ports. They have forgotten the all important thing that a day of reckoning will come for everything they have overlooked.

Possibly the most important feature of the case, which they have overlooked, relates to the method of settling the immigrants. They have apparently forgotten that the future weal of Canada depends directly on the proper assimilation of the heterogeneous mass of foreigners, who are annually entering the country. Only a lamentably small proportion of our immigrants are British subjects, inspired with those British ideals of justice and equity which have made Canada what she is to-day. The huge majority lack these traits and to such they must be taught. This can best be accomplished by direct contact. Otherwise the newcomers will offer a serious menace to future progress.

Let us ask, are these new settlers being placed in such a way that they will come into direct contact with sturdy British ideals or are they being herded in isolated colonies, in which their own beliefs and institutions will have an opportunity to flourish and multiply? Are they being placed in such a way that the process of assimilation will be as rapid as possible, or are they so situated that the process will take generations? We are compelled to say that the Government has displayed a serious lack of foresight in placing these colonies, and that in herding settlers of similar race and sympathies together, they have seriously hampered the process of assimilation.

It is an actual fact that in many districts in the Northwest a traveller can journey for miles without encountering a single Britisher, the country being completely occupied by Mennonites and other peoples of peculiar beliefs. This is a condition which should not exist in Canada and the policy which has produced it should no longer be permitted to hold sway. Let us make Canada a united whole, true to British institutions and British ideals, and that as rapidly as possible.

MAY NOT REBUILD IN TORONTO.

THE one depressing note in the aftermath of the fire, as far as Toronto is concerned, is the report that several wholesale firms are considering removing to other centres. The cause assigned for this is the prevalence of rumors that labor unions interested in building operations will take advantage of the situation to insist on material advances in wages. As the cost of building in Toronto is at an excessive figure to-day it is maintained by some owners that it would be unwise to build in Toronto if the cost were made greater. The unions should think carefully before insisting on an advance now.

C. I. F. TERMS.

A. M. St. Arnaud, manager of the Canada Hardware Company, Montreal, states to Hardware and Metal that he is waiting for Mr. Jackson to cite the precedents in English courts to which he referred in the interview which appeared in our last issue. At the same time he desires to call Mr. Jackson's attention to the fact that we are in Canada, not in England, and that it is with Canadian law and practice that we are concerned.

AUSTRALASIAN TRADE.

IN his report to the Trade and Commerce Department of the Dominion Government, J. S. Larke, commercial agent, writes: "There are inquiries for Canadian lines covered by the preferential tariff. I leave by the Ventura for Auckland to-day for a tour to the chief towns of the colony. The shipments of goods from the United States have not been increasing either in quantity or variety, but from Canada they should steadily improve. * * * A firm selling the machinery and implements for wheat-growing only could do business profitably in the Central Division, but not in the other sections. On the coast the traveller should be able to offer dairying and corn-growing appliances, and in the west, the dry region, he should be equipped with windmills, pumps, and other irrigating materials. The travellers confine themselves to the special districts and become experts in the special requirements of their district. Where the business is still done by local firms, who purchase their goods outright, the trade naturally gravitates to the house which can supply the largest variety of the lines required by them. So far as expenses are concerned this applies to goods sold only to wholesale houses. With much enterprise Canadian firms have sent out travellers selling only such lines as silverware, graniteware, umbrellas, neckwear, &c. A young manufacturing country such as Canada could not get the larger share of the trade in these lines, and could not expect, in the face of the competition here, to sell enough to maintain a representative, but there appears to be no good reason why one man could not combine umbrellas and neckwear, and another plated goods and graniteware, particularly as these lines are sold to the same houses. Handled singly the business did not and could not pay, but by combination it might be made to pay. There have been some instances of effective combination on the part of Canadian exporters, but not many, and our trade suffers in consequence."

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, April 22, 1904.

Hardware.

THERE is little change in the general condition of the wholesale hardware trade this week. Business is only fairly active and is not up to expectations. Compared with the same week in 1903 there has been a considerable decline for all of which it is hard to account. All branches of the trade are anxiously waiting for the opening of river and lake navigation which is expected to give a much needed impetus to business. Many points cannot be reached promptly or cheaply by rail and the opening of navigation is bound to give an impetus to business with these points. Wholesalers are still complaining that supplies from American manufacturers are delayed in shipment. Goods shipped early in March have not yet arrived and supplies of many lines are short. Trade is seriously handicapped by these delays. Collections are still very unsatisfactory, although there has been some improvement. Northwest trade is very active but the increase is not sufficient to compensate for the present dullness of trade in the east.

Prices throughout show little change. Wooden wash tubs have been advanced about 5 per cent. Petroleum faucets have been advanced in price.

Lawn Mowers—Trade has been very quiet this week very few orders having been received. Deliveries are now being made. Prices are steady and unchanged. We quote: With 8-inch wheel, sizes 12, 14 and 16 inch, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18 $4.75; 20, $5.25 each.

Garden Hose—There are no price changes. Business is fairly active and is expected to improve shortly. The discounts continue as follows: Trade, 75 per cent.; Western, 65 and 10 per cent.; White, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; cotton, 60 per cent.

Hose Reels—As noted last week prices are from 15 to 25 per cent. higher than last year. It is impossible to give any satisfactory quotations on this line as there are so many makes and no standard price. It is safe to state, however, that there has been an advance of from 15 to 25 per cent.

Ice Cream Freezers—As noted last week American makes are about 10 per cent. dearer than last week. Business this week is not so active as last, but it is expected that the next month will see a very active demand. We quote the following range of prices for the leading brands: One quart, $1.50 to $1.60 each; 2 quart, $1.70 to $1.80 each; 3 quart, $1.95 to $2.25 each; 4 quart, $2.35 to $2.60 each; 6 quart, $2.95 to $3.25 each; 8 quart, $3.70 to $4.10 each; 10 quart, $4.75 to $5.50 each; 12 quart, $5.75 to $6.50 each; 14 quart, $6.75 to $7.50 each.

Agricultural Wrenches—In steady demand. The discount is now 25 per cent. off list, which means a slight reduction in price.

Harvest Tools—There is a good active demand this week. The discount is still 60 per cent.

Spring Hinges—Wholesalers report a fairly active demand. We again quote as follows: No. 5, $17.25 per gross; No. 10 $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Heavy Screw Hooks and Hinges—These are selling well at unchanged prices. Sizes 12 inches and upwards are selling at $3.25 per 100 lbs; the price of the 6, 8 and 10-inch sizes is $4.25.

Wire Hat and Coat Hooks—As noted last week, wire hat and coat hooks have been reduced about 10 per cent. The price of the 3-inch size is now 75 cents per gross.

Churns—Prices are firm and unchanged. Business is fair. There are no new features to the market. The discounts are 40 and 15 per cent. f.o.b. Montreal and 30 and 30 per cent. f.o.b. factory.

Sap Spouts—There is still a fair demand although the season is almost over. The price is $6 per 1,000. Cook's sugar bits are selling at 50 per cent. off list.

Poultry Netting—Trade is quiet this week. Discounts for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-gauge, the discounts are 55 and 5 per cent.

Galvanized Poultry Netting Staples—In steady request at former prices which were as follows: Sizes 5-8, 3-4, 1, 1 1-8, 10-lb boxes, $12.50 list; 25 and 50-lb boxes, $12.25 list; 100-lb boxes, $12 list. Less 57 1-2 per cent.

Bed Staples—The discount on the Montreal Rolling Mills Company's and the B. Greening Wire Company's lists is 57 1-2 per cent. The discounts on the Dominion Wire Company's list are 25 and 2 1-2 per cent.

Blind Staples—The discount is 40 per cent.

Boxwood Rules—Discounts range from 52 1-2 to 50 per cent. off list.

Shot Guns—These can be obtained at very low prices owing to the severe competition of the American manufacturers.

Wire Nails—Trade is still on the quiet side, but a big improvement is bound to come very soon. We quote: $2.40 per keg carlots and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford and St. John.

Cut Nails—Business has been quiet this week. Prices continue steady at former quotations, which were: $2.30 per keg f.o.b. Montreal, Toronto, Hamilton and St. John.

Fence Staples—Prices continue as follows: $3 per 100-lb keg for galvanized, and $2.80 for bright; 25 to 50-lb packages, 25c extra.

Pressed Spikes—The discount is 25 per cent.

Horseshoes—There is an average business doing for this season. Prices are steady. We quote: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c per keg extra f.o.b. Montreal only.

Horsenails—Trade is of average volume. We quote: C brand, 40, 10 and 7 1-2 per cent. off list; other brands 55 to 57 1-2 per cent. off.

Screen Wire Cloth—The price is $1.50 per 100 square feet.

Galvanized Coil Spring Wire—Trade continues to show considerable improvement. We quote as follows: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Carlots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in carlots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—The demand continues steady. We again quote as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11 $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots 12 1-2c extra per 100 lbs will be charged.

Barb Wire—Some wholesalers report orders from retailers who bought earlier in the season but not from the jobbers

and have been disappointed in deliveries. We quote: $2.75 per 100 lbs f.o.b. Montreal, and $2.50 f.o.b. Cleveland. Carlots of 15 tons $2.40 f.o.b. Cleveland.

Smooth Steel Wire—There is a fair trade passing at unchanged prices: Bright and annealed, $2.50 per 100 lb f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb are now as follows: Coppered wire, 60c; tinned wire. $2; oiling, 10c; spring wire, $1.25; best steel wire, 75c; bright soft-drawn, 15c; hay-baling wire, 20 to 25c.

Annealed Hay Wire—Annealed hay wire and annealed and oiled wire are now sold at list prices plus the usual extras.

Fine Steel Wire—There is a quiet trade doing at steady prices. The discount is 25 per cent. with net extras as follows: 1 and 2-lb hanks, 25c per 100-lbs; 1-2-lb hanks, 37 1-2c; 1-4-lb hanks, 50c.

Brass Wire—The market is quiet. The discount is 60 per cent.

Copper Wire—There is very little doing. The discount is 60 per cent.

Rivets and Burrs—There is a brisk trade this week. Discounts are: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—The demand continues active and all indications point to a busy season in this line. Discounts are: Carriage bolts common, ($1.00) list 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes 4c per lb off; nuts, hexagon, all sizes, 4 1-4c per lb off.

Washers, 45 per cent. off.

Screws—There is a shortage in some sizes. The demand is brisk. We quote discounts as follows: Round head, bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Cordage—Business in rope and binder twine has been very active for several weeks. Prices are firm in all lines of cordage. Cotton goods continue firm at present high prices. We quote: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; Russian tarred spunyarn, 13 1-2c; jute rope, 3-8-in in diameter and upwards, 9c; cotto nrope, 21c; cotton twine, 24c for 3 and 4 ply. Cotton bedcord, 90c to $1.70, according to length. Sash cord 30 to 31 1-2c; cotton candle wick, 22 to 24c.

Building Paper—From country points there is a good demand and indications point to a brisk trade in the city unless building operations are paralyzed by the threatened strikes. We quote: Tarred felt, $1.85 per 100 lb; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry sheathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c per roll.

Cement—Trade is now commencing to be quite active and the opening of lake and river natigation will see some large shipments. Prices are steady at former quotations, which were: Canadian cement, $1.90 to $2.25: German, $2.25 to $2.40: English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel, ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—These are now moving in large quantities and it is doubtful whether supplies on hand are sufficient to last until the opening of navigation. English are selling at $16 to $22 per 1,000; Scotch, $17 to $22.

PLUMBING GOODS.

There is a fairly active trade in plumbing goods, but of course business is greatly hampered by the late opening of navigation. The backward season is responsible for a slight falling off in business as compared with last year. Orders are accumulating for shipment at the opening of navigation and there will soon be a big rush. Prices throughout are unchanged. Early in the week there was some cutting in soil pipe and fittings, but prices quoted are now being firmly maintained.

Lead Pipe—There is an active demand. Orders are accumulating for forward delivery. The price is still on a basis of 8c for composition and 7c for ordinary. The discount is 35 per cent.

Soil Pipe and Fittings—As noted above there was some strong competition in this line early in the week, but prices are now being well maintained.We quote: Light soil pipe, 3 to 6-in, 50 and 10 per cent.; medium and extra heavy soil pipe, 2 to 6-in. 60 per cent.; extra heavy soil pipe. 8-in. 45 per cent. Light fittings, 2 to 6-in, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in, 60 and 5 per cent.; extra heavy fittings 8-in, 45 per cent.

Iron Pipe—We quote again as follows: Standard pipe, per 100 feet, in length under 19 feet—black, 1-8-in, $2.30; 1-4-in, $2.30; 3-8-in, $2.55; 1-2-in, $2.85; 3-4-in, $3.65; 1-in, $5.20; 1 1-4-in, $7.35; 1 1-2-in, $8.95; 2-in, $12.55. Galvanized—1-4-in. $3.20; 3-8-in. $3.45; 1-2-in, $3.90: 3-4-in, $5; 1-in. $7.20; 1 1-4in. $10.05: 1 1-2-in. $12.20; 2-in, $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.; and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in, $4.20; 3-4-in, $5.25; 1-in, $7.55; 1 1-4-in, $10.55; 1 1-2-in, $12.75; 2-in, $17.60. Galvanized—1-2-in, $5.25; 3-4-in, $6.65; 1-in, $9.55; 1 1-4-in, $13.25; 1 1-2-in, $16; 2-in, $21.90. The discount on all sizes of extra heavy pipe is 12-12 per cent.

Solder—There is a fairly active demand this week at unchanged prices. Bar solder is quoted at 18 cents and wire solder is quoted at 18 1-2 cents.

METALS.

General trade in metals is fairly satisfactory, but the opening of navigation is expected to give it a much needed impetus. In pig iron there has been considerable activity this week, several fair-sized orders for imported iron having been booked. These sales are said to have been made at firmly maintained prices. Canada plates, black sheets, tinplates, etc., are firmly held, as English cable advices indicate a very strong market. It is rumored that English quotations on these lines may be withdrawn at any time. Since our last report ingot tin has strengthened and weakened again and our quotations of last week therefore still apply. Copper and lead are very firmly held in sympathy with prices in foreign markets.

Pig Iron—Import business is commencing to show some activity, orders for import iron to be delivered after the opening of navigation being fairly numerous. All the indications point to a good business this Spring in imported and domestic pig. In the sales which have been made recently prices have been fairly well maintained at the nominal quotations and the general tone of the market is firmer than some months ago. We quote: Summerlee, $20.25 to $20.75; Glengarnoch, $20.25 to $20.75; Gartsherrie, $20; Londonderry, $18.50 to $19. (No deliveries of Londonderry have been made yet, but these are the figures at which it is quoted.) Carnbroe, $18.50; No. 1 Middlesboro, $16.50; No. 2, $15.50. Ferrona iron delivered in Montreal in car lots is quoted as follows: No. 1, $18; No. 2, $17.50; No. 3, $16.50; No. 4, $16.

Bar Iron—Business this week has been quiet and there has not been much demand for forward delivery. Prices continue at former quotations which were: Merchants' bar, $1.75; horseshoe iron, $2; forged iron, $1.95.

Black Sheets—As noted above, English advices indicate a rising market and the withdrawal of all quotations is hinted at. Under these circumstances local stocks are firmly held at present prices: We again quote: 28-gauge, $2.35; 26-gauge, $2.30; 22 to 24-gauge, $2.25; 19 to 20-gauge, $2.30, and 8 to 10-gauge, $2.40.

Steel—There is a satisfactory trade passing this week. We quote as follows: Sleighshoe, $1.90: tire, $1.95 to $2.10;

spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—We quote as follows: Black Diamond, 8 to 9c; Sanderson's, 8 to 9c, according to the grade; Jessop's, 13c; Jonas & Colver's, 10 to 20c; "Air Hardening," 65c per lb; Conqueror, 7 1-4c.

Sheet Zinc—There is a moderate trade at $6.15 to $6.25 in cask lots, and $6.50 in smaller.

Galvanized Iron—Prices are firm. There is an active trade at steady prices. Orders are accumulating for shipment as soon as the river and lakes are open. We quote again as follows: 28-gauge, Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz, $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c extra.

Tinplates—Firmly held in sympathy with strong market in Wales. Former quotations of $3.75 for cokes and $4 for charcoals still apply.

Terne Plates—We quote $6.75.

Ingot Tin—Ingot tin market strengthened and weakened during the last week and quotations given in our last issue still apply. We quote 32 to 32 1-2c.

Ingot Copper—The copper market is very firm and remarks made in last issue still apply. The price is 13 3-4 to 14c per lb, the former price being for large quantities.

Antimony—No change. Price of Cookson's is 7 3-4 to 8c.

Coil Chain—The demand is quite active. We quote: No. 6, 10c; No. 5, 9c; No. 4, 8 1-2c; No. 3, 7c; 1-4-in, $6.10; 5-16-in, $4.70; 3-8-in, $4; 7-16-in, $3.80; 1-2-in, $3.70; 9-16-in, $3.55; 5-8-in, $3.35; 3-4-in, $3.30; 7-8-in, $3.25; and 1-in, $3.20 with 10c allowance on carlots.

Canada Plates—Prices are firm in sympathy with strong English market. We quote: 52s, $2.30; 60s, $2.30; 75s, $2.40; full polished, $3.60 and galvanized $4 to $4.10; galvanized 60s, $4.25 to $4.35.

Pig Lead—Lead is very firmly held and is likely to advance. For large quantities the price is $3.40, but this may be withdrawn at any time. The prevailing price is $3.50.

Zinc Spelter—Still quoted at 6c.

Scrap Metals—The market is quiet, but there is a good demand for copper, which has been advanced slightly. We quote: Heavy copper and wire, 11 to 11 1-2c per lb; light copper, 10 1-2c; heavy red brass, 10 to 10 1-4c; heavy yellow brass, 8 1-2c; light brass, 5 1-2c; lead, 2 3-4c; zinc, 2 3-4 to 3c; iron, No. 1 wrought, $10 to $12; machinery scrap, $15 to $16; stove plate, $12; mixed country rags, 65 to 75c per 100 lbs; old rubbers, 5 1-2 to 6c per lb.

HIDES.

There has been no change in hides. We quote:

No. 1 beef hides	0 08 0 08½
No. 2 "	0 07 0 07½
No. 3 "	0 06 0 06½
Lambskins	0 75
No. 1 calfskins	0 11

ONTARIO MARKETS.

Office of HARDWARE AND METAL,
10 Front Street, East.
Toronto, April 22, 1904.

DESPITE the continued Wintry weather there is a brisk demand for Spring and Summer goods. Business is practically of the same nature and volume as a week ago and as there are no price changes the market is comparatively featureless. The effect of the fire on the retail trade will not be as serious in the hardware trade as in several other lines, notably dry goods and stationery. In the latter line business will be seriously affected all over Canada, but in practically all hardware lines temporary inconveniences will be the worst result. The hardware firms affected are all strong financially and as far as can be learned have already made arrangements or are now making them for taking care of their customers' wants. It need hardly be suggested here that the trade should be as considerate as possible in their relations with the sufferers in the fire, at least for a few weeks, as it will take many days for even the most enterprising firm to get its office system down to a basis which will ensure as prompt service as they desire to give.

Oil Stove Wick—An advance equivalent to about 10 per cent. is quoted by some houses, owing to the rise in cotton values.

Steel Track Door Hangers—Prices are steady since the reduction, with a good trade doing. We quote as follows: Steel track, 1x3-16 inches, $3.75; 1 1-4x3-16 inches, $4.75. At least one house is, however, quoting as low as $3.50 for 1-inch hangers.

Chain—There is a good trade at steady prices. Prices are still as follows: 1-4-inch, $5.60; 5-16-inch, $4.45; 3-8-inch, $3.85; 7-16-inch, $3.70; 1-2-inch, $3.55; 9-16-inch, $3.45; 5-8-inch, $3.35; 3-4-inch, $3.25.

Step Ladders—There is a good demand for pine ladders on this market at 10c per foot for 3 to 6 feet, and 11c per foot for 7 to 10 feet ladders.

Lawn Mowers—Business in this line is improving each week. Prices keep as follows: Woodyatt, 10 1-2 inch wheel, $8.50; Star, 9 inch, $7; Daisy, 8 inch, $5.75; Philadelphia, 7 1-2 inch, $7; Ontario, 7 1-2 inch, $15.80; King Edward, 12 inch, $9.50 (14-inch cut in aboce). D. Maxwell & Sons, 10 1-2 inch, $7.50 to $10; 9 inch, $5.50 to $6.25; 8 inch, $4.90 to $5.50. Discount 50 per cent.

Screen Doors—The demand continues to expand. There is no change in prices which are as follows: Common, two or three panel, walnut, 4 inch, $6.50; yellow and green stained, $6.75; in natural colors oil finish, $8.75, with 20c less for 3-inch style.

Screen Wire Cloth—Prices are steady at $1.50.

Spring Hinges—An improved trade is reported with prices steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—Business continues brisk. Prices are steady. We quote: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c per 100 lbs extra charged.

Barb Wire—A fairly good business is doing. Our quotations are steady as follows: $2.75 per 100 lbs f.o.b. Toronto and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—An excellent demand continues. The market is steady Our quotations are as follows: No. 9, $2.70 per 100 lbs, freights equalized with factory points at Montreal, Hamilton, London, Welland or Walkerville and allowance to other points up to 25c; carlots, $2.65, freight allowance to 20c.

Wire Nails—A steady trade is doing. Prices are unchanged at $2.45 per keg f.o.b. Toronto, with carlots $2.40.

Cut Nails—There is a fair trade, with prices steady at $2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—A moderate trade is reported. Prices show no change. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c less.

Horsenails—Business continues fairly active. We still quote discounts as follows: "C" brand, 40, 10 and 7 1-2 per cent.; other brands 55 and 57 1-2 per cent.

Screws—A good movement in this line is recorded. Prices are steady. We quote: Flat head bright, 87 1-2 per cent. discount; round head bright, 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—Practically every order that comes to hand calls for rivets and burrs. Prices are firm. We again quote as follows: Iron rivets, 60 and 10 per cent. discounts; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—Sorting business is quite active. Prices are steady: We quote: Carriage bolts, common ($1 list), 3-16 and 1-4-inch, 60 per cent.; 5-16 and 3-8-inch, 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.;

151 Hastings St. W., VANCOUVER, B.C., and LIVERPOOL, ENGLAND.

carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—There is only a fair trade doing in binder twne. Orders are well in and, as there is not much sale at the retail stores, repeat orders are not coming in. Twine, sashcord, etc., are steady at the higher prices. We quote: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; double shingleyarn, 11c; single shingleyarn, 10 1-2c; sashcord 'Hercules,' 32 to 35c; 'Star,' 36 to 38c; cotton rope, 3-16-inch and up, 20 1-2 to 22c; 5 32-inch, 25 to 27c; 1-8-inch, 25 to 28c; cotton twine, 3-ply 25 to 28c; 4-ply 32 to 34c; calking cotton, 16 1-2 to 17c; cotton waste, colored, 6 3-4c; white, 11 to 13c.

Building Paper—There is an active demand for building paper. Prices are firm throughout. We quote as follows: Tarred felt, $1.85 per 100 lbs; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry seathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c per roll.

Firebricks—Prices are steady, the demand active. We quote English and Scotch at 28 to 35c.

Cement—Owing to the continuing disagreeable condition of the weather trade is not as good as might be expected at this season of the year, but dealers calculate that when the weather begins to ease up there will be a great rush for cement as there is a great deal of building being done this Spring. As it is the market is fairly brisk. Prices are firm as below: Canadian Portland, $1.90 to $2.25; American Portland, $2 to $2.10 f.o.b. Toronto.

PLUMBING GOODS.

Business continues to improve, though it is yet far below the volume expected. The fire is likely to affect the plumbing trade about as much as any in the city, as the warehouses which will take the place of those destroyed will surely be built on modern principles and will call for a large amount of plumbing and steam-fitting supplies. Prices are steady throughout.

Lead Pipe—Business is slow at steady prices. We quote: Lead, 7c; lead waste pipe, 8c; discount 35 per cent.

Soil Pipe and Fittings—An improvement in the demand continues. Prices are steady. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-inch pipe 40 and 5 per cent.

Iron Pipe Fittings—Business is larger than last week. We quote: Malleable fittings, 20 per cent.; cast iron (standard), 57 1-2 per cent.; headers, 52 1-2 per cent.; flanged unions, 60 per cent.; malleable bushings and plugs, 57 1-2 per

OPEN HEARTH STEEL

cent.; nipples up to 6-inch inclusive, 67 1-2 per cent.

Copper Range Boilers—A fair trade has been done since the new prices were issued. Discounts at 15 per cent. continue.

Iron Pipe—Prices are firm at unchanged figures. We quote f.o.b. Toronto: Black pipe 1-8-inch, $3.25; 1-4-inch, $2.07; 3-8-inch, $2.25; 1-2-inch, $2.50; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.85; 2-inch, $11.05; 2 1-2-inch, $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25. Galvanized pipe, 1-4-inch, $2.88; 3-8-inch, $3.11; 1-2-inch, $3.42; 3-4-inch, $4.40; 1-inch, $6.35; 1 1-4-inch, $8.80; 1 1-2-inch, $10.75; 2-inch, $14.80.

Enameled Ware—There is a brisk movement at the lower prices. We quote: "Standard" 5 1-2 feet rolled rim, first quality, at $21.60; second quality, $17.85. There is no change in closet quotations.

METALS.

The pig iron market in the United States has weakened considerably yet foundry iron is holding fairly steady to last week's quotations. The Canadian market, while not so strong as last week, shows no reduction. In other lines there is practically no change. While large stocks of metal were destroyed in the warehouse of M. & L. Samuel, Benjamin & Co. stocks held elsewhere and in transit by that firm will probably relieve the situation in a few days.

Pig Iron—Business is of fairly large volume. Prices are nominally unchanged at: Middlesboro, $19.50; Canadian $18.50 to $19 for No. 1 and $18 to $18.50 for No. 2, f.o.b. Toronto; Midland, $1.50 lower.

Bar Iron—The market continues fairly steady. Prices are steady at $1.80 f.o.b. Toronto. For extras as cut to length while rolling, 2 feet and over, 10c per 100 lb; 1 foot and under 2 feet, 15c; under 1 foot, 20c; over 20 feet by special agreement according to length and size.

Steel—It is still stated that steel is being dumped on this market at lower prices than those now prevailing at Pittsburg. There is a good demand. Our quotations are as follows: Jessop's high speed, 60c; Jessop's "Standard" tool, 14c; "Chas. Leonard," 8 to 9c; Jessop's best crucible sheet steel, 14c; Crucible Steel Co.'s "Black Diamond," 10 to 11c; "Silver," 13c; "Special," 17c; "Rex" high speed, 65 to 75c; "Self Hardening," 45 to 50c; Morton's tool steel, 14c.

Black Sheets—Orders for both import and stock are excellent. Prices are steady.

Canada Plates—Business is increasing in volume. Prices are unchanged, though firm. We quote as below: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—A large trade is doing. Quotations locally are firm but unchanged at 30 to 30 1-2c.

Galvanized Sheets—Prices are steady throughout. Our quotations are as

Savage Rifles.

Model 1903
22 Caliber Repeater

Everywhere pleases discriminating sportsmen. Take advantage of the demand our extensive advertising campaign will create, and carry in stock the best selling high-grade rifles in the market.

The Savage Plan

We have built up our business by maintaining prices that give to the dealer a **legitimate** profit on every Savage Rifle he sells.

SAVAGE ARMS COMPANY, UTICA, N.Y., U.S.A.
BAKER & HAMILTON, San Francisco and Sacramento, Pacific Coast Agents.

follows: Queen's Head, $4.25 for 28 gauge; American, $.4 for 28 gauge; Bell brand, $4.25 for 28 guage; Gordon Crown, $4.25 for 28 gauge.

Tinplates—Prices are unchanged. We quote: Coke plates, bright, 14x20, $3.50; charcoal plates, $4.25.

Copper—There is no change in prices. We quote: Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—The market is firm, a good trade being reported. We quote $3.30 per 100 lbs for pig lead and $3.65 for bar lead.

Zinc Spelter—A fair demand at 6 to 6 1-2c per lb.

Zinc Sheets—The market is firm and a fair business doing in small lots. We quote: Cask lots, $6.70 to $7. and part casks $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c, and wiping 17c.

Antimony—8c per lb.

Old Material—A good supply, a fairly brisk demand and firm prices identify the market this week. Prices have undergone no change since our last quotations. We quote as follows: Heavy copper and wire, 10 1-4c per pound; light copper, 9 1-4c per pound; heavy red brass, 9 1-4c per lb; heavy yellow brass, 8 to 9c per lb; light brass 5 to 5 1-2c per lb; lead, $2.50 per cwt; scrap zinc, 3c per lb; iron, No. 1 wrought, $10; No. 2 wrought, $3; machinery cast scrap, $14; stoveplate, $10; malleable and steel, $4; old rubbers, 5 1-2 to 6c per lb; country mixed rags, 50c per 100 pounds.

PETROLEUM.

The market is fairly active with prices firm at the following quotations: Canadian prime white, 19c; Canadian water white, 20 1-2c; American prime white, 19 1-2c; American water white, 21 1-2c; ex-warehouse.

Hides, Skins and Wool.

The market is quiet this week and prices firm. New season lambskins have advanced 5c since our last quotations. Deacons (dairies) have also gone up 5c each. We quote the following prices :

HIDES.

No. 1 green, per lb	0 07
" 2 " "	0 06
" 1 " steers, per lb	0 07½
" 2 " " "	0 06½
Cured, per lb	0 08

Fleece wool, new clip, per lb	0 15 0 16
Pulled wools, super, per lb	0 18 0oz
" " extra "	0 20 0 22

TRADE CONDITIONS IN MARITIME PROVINCES.

Halifax, April 18th, 1904.

THERE is not much change to note in trade conditions here. On Saturday a fierce snow storm visited the Maritime Provinces and for the last few days we have again been in the grip of Winter. The season promises to be very backward as travellers from the eastern end of the province report that many of the harbors are not yet open to navigation. Better conditions prevail on the western shore, however. The Lunenburg fishing fleet has cleared for the Spring voyage to the banks, but of course it is too soon yet to speak of results. The off shore fishing continues good and the boats are landing good fares of cod, halibut and haddock, which is putting some money into circulation. The lobster fishermen to the east met with considerable loss of gear in Saturday's storm, as they had just got their traps out for the first time this season.

* * *

There are few changes in prices at this point. Sheet lead has been marked up a half cent a pound and pig lead also is firmer. A freight allowance of ten cents a keg on wire nails is now conceded when shipped in ten keg lots.

* * *

An officer of the Maritime Hardware Association who returned last week from the meeting in St. John says the trade in the sister province has been quiet during the Winter months but is now beginning to look up somewhat. A good deal of paper falls due in the next few weeks and some anxiety is felt as to the manner in which it is likely to be met as this will afford the best poscible index of trade conditions.

* * *

A new company called the Cape Breton Iron & Steel Co., has been organized at Sydney and is about to commence building operations. The immediate business will be confined to foundry work. A new company is also promoted to mine and reduce the iron ores at Torbrook in the western end of the province

* * *

The Munro Wire Works at New Glasgow made a very satisfactory statement at their recent annual meeting. A dividend of six per cent. was declared and the reserve fund was doubled.

PITTSBURG METAL MARKET.

From The Iron Trade Review, April 20, 1904

Pig Iron—The cancellation of the Steel Corporation's May tonnage of Bessemer with the merchant furnaces in the Valleys has not yet caused the weakening of the market that might be expected. We note the sale of 1,000 tons of Bessemer for delivery the remainder of this month at $13.50 at the furnace. There is no inquiry for either Bessemer or basic for May and June delivery, but it is doubtful if better than $13.25 at the furnace could be done at this time. Small lots of foundry iron are being sold, mostly for prompt shipment at prices ranging from $14 to $14.85. That $14.85 will be paid indicates the peculiarity of the foundry iron situation in view of the fact that several excellent brands are being sold at $14 Pittsburg. We make the following quotations:

Bessemer, Valley	$13 35 to 13 50
Bessemer, Pittsburg	14 20 to 14 35
No. 1 Foundry	14 75 to 15 00
No. 2 Foundry	14 00 to 14 25
Gray forge, Pittsburg	13 25
Chilled basic, Valley	13 00 to 13 25
Chilled basic, Pittsburg	13 85 to 13 95

Steel—The steel market is quiet and there is little demand for billets or bars. Welsh mills are inquiring for tin bars and billets for delivery the third quarter and one lot of 10,000 tons has been sold at 80 shillings, delivered. Premiums for spot bars and billets are no longer being paid. Agreed quotations are as follows: Bessemer and open-hearth billets, 4x4 inches, and slabs, up to and including 0.25 carbon, $23 Pittsburg, Wheeling, Valley, Johnstown, Ashland, Ky., Ironton, O., and Lorain, O., 0.26 and including 0.60 carbon, $1 advance; and 0.61 to 1.00 carbon, $2 advance. Billets smaller than 3 7-8 inches and sheet and tin bars are $1 per ton extra. Bessemer and open-hearth rods are still quoted at $30 to $31 Pittsburg.

Wire and Wire Nails—Demand for wire and wire nails continues good, although the current buying is not as heavy as it was a month ago. The market is firm and there is practically no shading. Quotations are unchanged: Wire nails, carload lots to jobbers f.o.b. cars Pittsburg, are quoted $1.90 base; plain wire, carload lots, $1.80 base; barb wire, carload lots, $2.20 base; staples, carload lots, $2.05 keg. Galvanized, 30 cents extra. Carload lots to retailers are held at 5 cents advance in all lines, and on less than carload lots a further advance of 10 cents is charged. Steel and iron cut nails, carload lots, $1.75, and less than carload lots, $1.80, f.o.b. Pittsburg, plus freight to points of destination. Terms, 60 days, less 2 per cent. off in 10 days.

Pipes and Tubes—Several large contracts for line pipe and casing were placed during the past few days. The Wheeling Steel and Iron Co. was awarded a contract for 100 miles of 6-inch pipe for an oil line in California. This will require about 5,000 tons of material. The Philadelphia Co. also placed an order with an eastern mill for about 2,000 tons of pipe, while another order calling for a similar tonnage was placed by an eastern concern. The Manufacturers' Light and Heat Co. is contemplating the purchase of a large tonnage of line pipe, contracts for which are shortly to be placed. The requirements of the Standard Oil Co. it is estimated will be fully as large this year as last, when their purchases amounted to considerable over 100,000 tons.

Bars—Specifications on iron and steel bars are heavy, but the current buying is limited to small lots entirely. We repeat quotations: Bar iron, 1.40c to 1.45c, Pittsburg, for local delivery, while for Western shipment quotations are based on 1.35c, Pittsburg. Hoops are held at 1.40c base, and bands at 1.35c taking bar extras.

Sheets—The wage agreement entered into between the sheet and tin plate manufacturers and the Amalgamated Association last week calls for an 18 per cent. reduction on steel sheets and the same wages for rolling steel as iron, the latter having been rolled for 10 per cent. less than steel heretofore. The base on sheets has been reduced to 2.30c however. On tin plate the reduction amounts to 18 per cent. and the base has been reduced to $3.40 a box. The buying of both sheets and tin plate is heavy, numerous contracts for sheets for delivery to July 1 having been placed. On desirable orders as low as 2.20c has been done on sheets in 250 ton lots, but these concessions are by no means general.

Coke—The demand for foundry and furnace continues heavy, but shipments are being made more freely and premiums for prompt delivery are no longer being paid. Connellsville foundry coke is quoted at $2.15 to $2.50, while furnace is held at $1.60 to $1.65. During the week ending Saturday, April 9, the upper Connellsville region produced 203,946 tons while the output of the lower region amounted to 55,708 tons.

LONDON METAL QUOTATIONS.

From the Metal Market Report.
New York, April 20, 1904

Tin—Spot tin opened firm at £126 17s 6d, futures £126 12s 6d, and after sales of 220 tons of spot and 100 tons of futures closed firm at £127 2s 6d for spot and £126 15s for futures, making price as compared with yesterday 12s 6d higher on spot and 12s 6d higher on futures. Singapore quotation for tin today was equal to £126 5s London, 20s lower than yesterday's closing.

Copper—Spot copper opened steady at £57 17s 6d, futures £57 15s, and after sales of 100 tons of spot and 100 tons of futures, closed steady at £57 18s 9d for spot and £57 15s for futures, making price as compared with yesterday 1s 3d higher on spot and 2s 6d higher on futures.

Lead—The market closed at £12 2s 6d, making price as compared with yesterday 2s 6d lower.

HARDWARE TRADE AND THE FIRE.

AMONG the firms whose premises following in whom the hardware and stock was destroyed were the and kindred firms are particularly interested:

P. D. Dods & Co., paints and oils, 35 Front street west. Loss, $10,000; insurance, $5,000.

Dodge Mfg. Co., transmission equipment, 33 Front street west, warehouse and contents destroyed.

Dominion Fence Co., Limited, 78 Esplanade street west, factory and contents destroyed.

The Fairbanks Co., machinery, scales, etc., 41 Front street west, warehouse and contents destroyed.

E. W. Gillett & Co., 32-34 Front street west, wholesale yeast manufacturers, stock and machinery, $100,000; building, $30,000; insurance, $50,000.

Gutta Percha and Rubber Mfg. Co., 45-49 Front street west, loss, $500,000; covered.

Gilmore Silverware Company, 86 Bay street, loss $3,000.

H. S. Howland, Sons & Co., wholesale hardware, 37-39 Front street west, loss $175,000; insurance.

International Stock Food Co., Bay street, factory and plant destroyed.

W. Jessop & Sons, Limited, tool steels, etc., 82 Bay street, building and stock, $20,000; covered.

A. Muirhead, 82 Bay street, loss, $10,000; covered.

McClary Manufacturing Co., stoves, 14-18 Bay street, loss $40,000; insurance $25,000.

Office Specialty Company, 77 Bay street, loss $5,000; insurance, $5,000.

C. H. Westwood & Co., fishing supplies, 72-74 Bay, loss $60,000; insurance $55,000.

M. & L. Samuel, Benjamin & Co., Wellington street west, loss.....; insurance .....

W. B. Stewart, manufacturers' agent, 27 Front street west, stock destroyed.

What the Firms Are Doing.

The Dodge Mfg. Co., whose factory is at Toronto Junction, just a few miles from the scene of the fire, will not be seriously inconvenienced as they can look after the demands of the customers from the factory.

The Dominion Fence Co., whose factory and plant were destroyed, will be unable to get into the market again in time for the present season.

The Fairbanks Co. have taken temporary offices at 124 Bay street. As they have large stocks in their Montreal and Winnipeg warehouses they will be able to fill all orders in a reasonable time. They have opened their vaults

NOT IN THE COMBINE

Ask for Prices of

Shovels, Spades, Scoops, Etc.

WE HAVE A LARGE STOCK.

CANADA HARDWARE CO., Limited, MONTREAL.

and have found all their books intact, so will start at once to fill orders.

The E. W. Gillett Co. had wisely kept in reserve a duplicate set of machinery. They have already secured premises at 15 Wellington east, and expect to be in a position to supply the trade in a short time.

The Gutta Percha and Rubber Mfg. Co. have ample space in their factory in Parkdale, Toronto, for their warehouse staff. As day and night staffs will be employed and as the firm have a large stock on hand they expect to satisfatorily cope with their trade in a few days.

H. S. Howland, Sons & Co. have taken temporary offices at room 704 Temple Building, and are making arrangements to secure a warehouse as soon as possible. In the meantime they are taking care of general orders and are in as good position as ever to take orders for nails as their nail factory, the Graham Nail Works, are in no way affected.

The McClary Mfg. Co. have large stocks in London and Montreal, so in all probability they will be able to handle orders from the trade with almost the same despatch as if there had been no fire.

M. & L. Samuel, Benjamin & Co. have taken temporary offices at Room 503 Temple Building. Despite the loss of heavy stocks they are in a position to fill orders in practically all lines, having good stocks in other warehouses and in transit and having recovered all their books in good shape. They have already filled some orders since the fire.

The Canada Paint Co., whose premises were in the first reports given as destroyed, came through the disaster with practically no loss whatever, and are in no way inconvenienced in filling orders sent to them.

The McClary Mfg. Co., of which Mr. A. D. Kennelly is manager, have secured temporary offices in the building of The Land Security Co., Adelaide and Victoria streets. They have also secured one of the buildings on the exhibition grounds for the purpose of carrying stock, and are now in a position to fill orders promptly.

THE ALABASTINE CO.

The Alabastine Co., whose premises were destroyed by fire on Thursday last week, have issued the following in a circular to the trade: "It will be at least two weeks before we can again turn out Alabastine or Jellstone. In the meantime, those wanting Alabastine are requested to send in their orders. Our jobbers are well stocked, and with their co-operation and assistance, together with that of the trade generally, we hope to be able to keep all supplied. In the land plaster, paristone and calcined or plaster of paris department we expect to very soon complete arrangements whereby present contracts will be taken care of, and new trade supplied with as little delay as possible.

THE WINDOW GLASS INDUSTRY.

It will be interesting to the glass dealers and jobbers in Canada to learn something of the window glass industry which in its ramifications extends to all portions of the globe where civilized man trades with his fellows. All our lives are made more cheerful and comfortable by the utility of glass. It admits through the holes in the walls of our habitations light and the cheerfulness of the sun's rays, and at the same time protects us from inclement weather. It is used now by our architects in a variety of ways by being bent, beveled and variously ornamented by the arts well known to the trade for the embellishment and ornamenting of our dwellings.

As in plate glass so in window, cylinder or sheet glass, Belgium precedes all the glass making countries of the world both in point of developing and perfecting sheet glass manufacture, as also in the volume of her output, exceeding not merely the product of one or two, but all the glass producing countries combined—Germany, Austria, Hungary, the Netherlands, Russia, the United States, France and Great Britain. All these countries except Great Britain have within the past quarter of a century increased their production of window glass, but not a single one of them has succeeded in completely displacing the imports of Belgian glass. The United States, even with their high tariff on glass, imported in 1903 upwards of 25,177 tons of window glass from Belgium.

England, which once stood next to France in the manufacture of blown sheet glass, as well as plate glass, has gradually been forced to the background and almost compelled to yield to Belgium, her window glass and plate glass manufacture being now confined to one single firm at St. Helens, Lancashire. The aggressive competition and masterful grasp of the window glass manufacture by Belgium compelled this firm, for their salvation, to open depots in many parts of England and Canada by which means they secure the wholesale dealer's price and profits. Otherwise if they sold to the wholesalers at Belgium's wholesale prices they would inevitably sink before Belgium's glass supremacy as the following English firms have done, viz: The Birmingham Plate Glass Co., Jas. Hartley & Co., Sunderland (sheet glass), the Thames Plate Glass Co., Chance Bros. & Co., Limited, (in sheet glass), Lyne Plate Glass Co., the Union Plate Glass Co., the British Plate Glass Co., the London Plate Glass Co., and the Manchester Plate Glass Co. The result of this condition of things is that Belgium holds England as her very best customer among the world's buyers of glass. England bought from the window glass makers of Belgium in 1903, 55,407 tons, which quantity would cover the surface of 1,486 acres.

Belgium's chief customers are Great Britain, United States, China, Japan, Netherlands, Canada, British India, Argentine, Australia, Turkey, Switzerland, Egypt, Germany, Chili and Denmark. These are important buyers of Belgian glass in the order given, England heading the list with the above quantity out of a total of 167,724 tons which equals one-third, and Great Britain together with her dependencies took in 1903 upwards of 85,000 tons, which was more than half of Belgium's exports.

Belgium gives to her English buyers of glass the very best of her product. In fact the English jobber insists on a carefully selected and regular standard of quality in all the grades, which are firsts (bests), seconds, thirds and fourths, and to maintain these there is a grade below fourths known as coarse,

by which a fair average excellence is maintained in fourths. As Canada is but a small customer compared to England, we taking only 8,962 tons in 1903, Belgium does not value us to the same extent, hence sells to us fourths as the lowest grade which also contains a lot of coarse glass. Canadian jobbers have been buying this fourths grade for years without a murmur, but they are now demanding a more carefully selected grading equal to that supplied to the English market. This demand, however, will avail them very little, on the principle that something is not bought for nothing. They must with their demand be prepared to pay for what they ask for, but all jobbers who are alive to their interests and the public demand for better goods, will be prepared to have the goods. Poor goods are dear at any price. England gets the quality she wants from Belgium and why cannot our jobbers get the quality Canada wants? What are our jobbers doing to meet these requirements?

Glass is said not to arrive in Canada from Belgium in so good condition as from England. Why is it? "Oh," says the dilatory importer, "the boxes are not strong enough." That jobber has not stopped to think that glass breaks only from shock or concussion, which in 999 times in 1,000 has not been sufficient to make any impression on the package. The English maker is wise enough to have his own servant see his glass handled from railway to ship's hold, and on arrival in Canada to see it discharged to the ship's side and to cars, thereby assuring his glass from breakage by careless handling. What we ask is, what is the Canadian jobber doing in this particular? He trusts to luck and is improvident. The wonder is that any glass gets here sound from Belgium. Why do not the Canadian jobbers join hands and have an agent at Antwerp to care for their interests, and one here to see that glass discharged in Canada? Let the Canadian jobber wake up and see that the remedy lies in his own hands, both as to securing better quality and glass arriving in sounder condition.

"Belgium precedes all the world in window glass making, and strange as it may seem, even France, Germany, England and the United States learned the art from Belgium. France and the United States first, Germany next and England last. Belgium is still what she has uninterruptedly been since 1840, the greatest blown sheet glass manufacturer in the world—with the world for her customer and the world-mart her almost undisputed domain. She precedes the rest in this specialty and has always maintained her lead. Other countries have come in to the competitive arena and here and there a portion of the domestic domain has been disputed, but thus far no other country has even so much as approached the distinction of being an international competitor in the world-mart with Belgium."

PERSONAL MENTION.

Mr. E. Dowsley, of A. Ramsay & Son, Montreal, has returned to his desk this week after an illness of about three weeks.

HARDWARE CONDITIONS IN MANITOBA.

BUSINESS for the past week shows up to have been very good and bright prospects are showing for the future.

The rising of the South Saskatchewan River at Saskatoon, which carried away two spans of the C. P. R. bridge, will undoubtedly delay traffic to some extent west of Saskatoon. It is reported that it will be two weeks before the bridge is repaired.

* * *

The Winnipeg branch of the Canada Cycle & Motor Co. report that orders are coming in fast for both light and heavy cars, although the majority of purchasers favor the heavier powered cars, with Tonneare bodies to carry four passengers. A neat and well finished "Ford" car had just arrived and will be sold in Winnipeg by McCulloch & Boswell. Buyers of cars are demanding two cylinder engines, as offering more elasticity in drive and greater power than the single cylinder type.

* * *

The market practically remains the same with little or no change in prices of any note. We quote:

Barbed wire, 100 lb.	$3 15

WANT TO EXPORT LEAD ORE.

THE Executive Council of the Associated Boards of Trade of Eastern British Columbia met in Nelson, B.C., last week and unanimously endorsed the memorial of the associate silver lead mines and the smelters to permit of the temporary export of a limited quantity of lead ore, the quantity exported to share in the benefits of the Dominion lead bounty. If this is done the quantity of silver lead ore produced will be greatly increased. The council also approved of the memorial of the Rossland board, asking that the duty on acid not manufactured in Canada, used in lead refining at the Trail smelter, be remitted. The third resolution approved of the request of the miners for export examination and report on the zinc resources of the Kootenay.

The Vulcan Iron Works Company, Winnipeg, will add another large building to their already extensive establishments at Point Douglas. This building will be 64x165 feet and will be used for a blacksmith and machine shop. Construction operations will be commenced next month.

CROWN JEWEL, STYLE "F."

The Crown Jewel Steel Range

Is indeed the Housewife's "JEWEL," made in Canada by the makers of the celebrated **Grand Jewel Cook Stove**, of which **over 30,000** have already been sold.

In view of the increased demand for Steel Stoves and Ranges, the makers are now giving their attention largely to this branch of the business, with highly successful results.

The Crown Jewel Steel Range has **Interchangeable Linings**, and will burn hard or soft coal, and when fitted with wood linings will burn wood 26 inches long. Six 8 or 9-inch Pot Holes with interchangeable key plates and large oven.

PAINT, OIL AND BRUSH TRADES

MONTREAL PAINTERS STRIKE.

THE retail paint trade of Montreal is very seriously affected by the strike of the International Brotherhood of Painters, Decorators and Paperhangers which was declared on Monday night. The strike involves about 900 skilled mechanics and is therefore of very serious proportions. About 17 employers signed the new agreement which the union presented and their 250 men are at work as usual, but the greater part of the painting trade is completely tied up.

The question at issue is solely the recognition of the union. The men are not asking for more wages; they are not asking for shorter hours. The whole question is whether or not the union shall be recognized. The present agreement with the employers expired on April 1st, but in the hope that some understanding could be reached the men remained at work until it was evident that the employers were fully determined to resist the demands.

In their reply to the demands of the men the Master Painters' Association stated that they were fully determined to enter into no further agreement with the union. They were resolved to reserve the right to make such arrangements as will suit the requirements of their various shops. They did not intend making any change in wages or in the number of hours of labor. They reserved to themselves the right to employ whom they pleased, whether union or non-union men. "Our shops shall continue to be as before, open shops to all competent men. No interference with our shops will be allowed by any officials of the House Painters' Union." These were the closing sentences of the reply.

It is to be hoped that the strike will not be of long duration as it is paralyzing the retail paint trade of the city.

Henderson & Potts' Price List.

Henderson & Potts Co., Montreal and Halifax, have issued their price list for the present season. The lines listed include alum, aluminum paint and bronze, anti-corrosive paints, deck, barn, floor, brick and wagon paints, benzine, liquid marine black, blackboard paint, borax, Brandram's white lead, zinc white and colors, kalsomine, carriage gloss paints, chemicals, colors in oil, coach colors, coal tar, dry colors, Dampney's ship's compositions, liquid and patent dryers, enamel paints, liquid and paste wood fillers, floor wax, Florence white, glues, gloss paints, gold bronze, leaf and paint, graining colors, graphite paint, liquid marine and Paris green, handy color paints, handy varnishes, hat enamel, Japanese enamel paints, japans, varnishes, kalsomine, knives, lacquers, linseed oil, liquid house paints, etc., litharge, mixed paints, roofing paints, white and red leads, paint and varnish removers, seam paint, shellac, sponges, stains, turpentine, wall tints yacht enamels, wood stains and fillers. As the Henderson & Potts Co. are recognized as among the most progressive and wide-awake manufacturing and wholesale paint firms in Canada this price list should be in the hands of all enterprising retail hardwaremen.

Paint and Oil Markets

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, April 22, 1904.

THE demand for linseed oil and turpentine continues steady and there are no extraordinary features to note. Stocks are fairly ample and in neither line is the market particularly strong. At the same time it is worthy of note that advices from Savannah indicate a slight stiffening of quotations and in consequence prices for May delivery of turpentine quoted by some Montreal houses, have been advanced this week. It was mentioned in last issue that for May shipments some houses were quoting prices 4 to 5 cents below the present market price. This statement does not apply to the market this week. The best price quoted for May delivery is now 85 cents.

The milder weather which prevailed early in the week had a stimulating effect on the demand from country points. But locally the optimistic feeling caused by the improvement in business this month has been dissipated by the strike of the house painters. It is said that 900 painters are idle and of course the result has been simply to paralyze the retail trade in this city. The effect will soon be felt by the jobbers and grinders, and will be only partially compensated by the improvement in country business. Prices generally may be described as steady. We quote:

Ground White Lead—Best brands, Government standard. $4.50; No. 1 $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead—$4.25 in casks, and in kegs $4.50.

Dry White Zinc—Pure dry, in casks, 6 1-4c; in 100-lb kegs, 6 3-4c; No. 1, zinc, in casks, 5 1-4c; in 100-lb kegs, 5 3-4c.

White Zinc—(ground in oil)—Pure, 25-lb irons, 8c; No. 1, 7c; No. 2, 6c.

Putty—Bulk, in barrels, $1.50; in 25-lb tins and irons, $1.80; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7c; 100-lb kegs, 7 1-4c; smaller quantities, 8 1-4c.

Red Leads—Genuine red lead, in casks, $4.25; in 100-lb kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks, $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge—Ground, casks, 5c; in less quantities, 5 1-2c; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 46c; 5 to 9 barrels, 45c; boiled, 1 to 4 barrels, 49c; 5 to 9 barrels, 48c. Delivered in Ontario between Montreal and Oshawa at 2c per gallon advance.

Turpentine—Single barrels 86 1-2 to 87c per gallon; 2 to 4 barrels, 85 1-2 to 86c per gallon. Standard gallon of 8.6 pounds. See remarks above.

Shellac Varnish—Pure white, $2.85 to $3.50; pure orange, $2.75 to $3.40; No. 1 orange shellac, $2.45 to $2.60.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil—8 3-4 to 9 1-4c in wholesale lots, and 1-2c additional for small lots.

Canadian Paris Green—Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c; 25-lb drums, 15 1-4c; 1-lb packages, 16c; 1-2-lb packages, 18c; 1-lb tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c per lb; 25 lb drums, 15 1-2c; 1-lb paper boxes, 16c; 1-lb tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

Ontario.

Office of HARDWARE AND METAL.
10 Front street east,
Toronto, April 22, 1904

THE effects of the unfavorable weather are even more apparent this week than in former ones. Trade early in the year was so small that it was generally accepted that April would be a particularly heavy month and that the balance for the season would be about maintained. These expectations have not, however, been in any way fulfilled. Business is no way larger than customary at this season; is, in fact, smaller now than last year in many respects.

Prices of most lines are steady. Turpentine is the only line which gives evidence of weakness. In this line, while prices are unchanged, the tendency is lower and a decline may result before the end of the week.

White Lead—Ex-Toronto, pure white lead, $4.65; No. 1, $4.20; No. 2, $3.90; No. 3, $3.50; No. 4, $3.25 in packages of 25 lb and upwards; 1-2c per lb extra will be charged for 12 1-2-lb packages; genuine dry white lead, in casks, $4.50.

Red Lead—Genuine in casks of 560 lb, $4.25; ditto, in kegs of 100 lb, $4.50; No. 1, in casks of 560 lb, $3.75 to $4; ditto, in kegs of 100 lb, $4.25.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c per gallon.

NO CHANCES TAKEN.

You do not run a risk or take a chance when you secure the agency of a ready mixed paint made with the best white lead the world produces—BRANDRAM'S B. B. GENUINE.

The only two brands manufactured in Canada that contain this white lead are

ANCHOR AND ENGLISH.

Announcement

The following circular has been mailed to the Liquid Paint customers of **The Canada Paint Company.**

"IN FILLING the Mailing List, which you were good enough to send us, with a memorandum of our Specialties, your name being printed upon the book of houses, we enclose a booklet bringing forward to the notice of your customers our 'SUN FLOOR FINISH.'

We attach a specimen of this booklet, and beg to state that, as we advertise this item very largely, it would be well for you to see that your stock is complete with our SUN FLOOR FINISH, as we anticipate the demand will be very large.

You will find further particulars on page 46 of Catalogue.

The SUN FLOOR FINISH is sold in sealed cans, put up in

HALF-PINTS, PINTS,
QUARTS,
HALF-GALLONS and GALLONS.

We will be glad to receive your Specification for SUN FLOOR FINISH."

Yours truly,

The Canada Paint Co.,
LIMITED.

Paris White—90c to $1 per 100 lb.

Whiting—60 to 65c per 100 lb; Gilders' whiting, 75c.

Shellac—Pure orange, in barrels, $2.50 to $3; white, $2.50 per gallon; No. 1, $2.37 1-2, including price of can.

Canadian Paris Green (present delivery)—Petroleum bbls, 13 1-4c; arsenic kegs, 13 1-2c; 50 and 100-lb drums, 14c; 1-2-lb tins, 18c.

St. John.

In burning oil there has been no change in price and it is doubtful if the reported decline in the States has affected the market. Business is light. Linseeds are stil offered low. Large shipments are being made on account of Lubricating oils have considerable attention at this season. Fish oils are scarce.

Window Glass.

MONTREAL.

Prices locally are unchanged but the market is strong and an advance is not unlikely. Prices have been advanced in Belgium owing to the fear of a general strike which may tie up the whole industry and cause delay in shipments. The first of May is always dreaded in Belgium as it is so often the occasion of troublesome strikes. We again quote: First break, 50 feet, $1.70; second break, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

Business in window glass throughout the country is slow compared with what was expected. A momentary impetus to the plate glass market has been given by the rush demands for large panes broken by the fire here this week. It is expected, moreover, that rebuilding operations will cause a busy season in this line. We quote window glass as follows: Star, first break at $3.30 per 100 feet and Double Diamond first break, at $5.10. Discount 15 and 20 per cent.

The Oil Industry of Japan.

THE development of the oil industry in Japan has been attended with pronounced success, there having been a rapid increase in the amount and value of the native product, says an exchange. The amount of kerosene used in the country has increased even more rapidly than has the development of the industry during the past 30 years, and larger importations have steadily accompanied the growing native production until the first six months of this year, during which the importation was only about two-thirds that of the same period in 1902. Whether this falling off marks a turn in the tide, or is only a temporary backward movement, is uncertain. Prior to 1900 there were no less than 40 native oil companies in the country, and during the two years following 28 new companies entered the field, but many have since been crushed out of existence by the International Oil Company, which is a branch of the Standard Oil Trust of America, and has a large refinery at Naoeutsu. The International is now working to secure a monopoly of the oil fields in districts where rich deposits are believed to exist.

STOVES AND TINWARE.

New Designs for Next Season.

MANY of their designs for next season now being ready the Western Foundry Co., Limited, Wingham, Ont., have issued several booklets which will be found of general interest to the trade. One of these is descriptive of the "Huron Manitou" a medium-prices wood cook stove, the trimmings of which consist of base strips, nickel plated oven and front door, medallions and side shelf, making it in every respect a handsome stove. This stove has a roomy firebox, heavy grates and linings, large roomy ovens, large copper reservoir and smooth castings, and is well mounted and well made. Another circular describes the "Huron Fame" box stove, a high-grade stove with extra large feed door opening, draw-out hearth slide, commodious swinging top with covers and centre, is mounted without the use of rods, thus allowing expansion and contraction of the castings and so preventing the liability of cracking. The entire body as well as the top is ornamented. A third circular refers to the "Premier Todd" box stove, the features of which are an extra large feed door with large turnbuckle; quick action screw draft, automatic rolling damper, opens and shuts with door; reversible pipe collar, and full revertible flues; nickel crown pieces, foot rails, screw draft, turnbuckles and automatic damper handle. The most important of this series of booklets is that devoted to the "Huron" steel range for hard or soft coal or wood. The points of excellence in regard to this stove are given as follows: The body is made of heavy cold rolled close annealed steel of a refined quality. All parts that are exposed to the direct action of the fire are of double thickness, with an asbestos mill-board between, all securely riveted together in a workmanlike manner. This construction cannot be excelled. The ovens are made of heavy wrought steel, and are extra large and high. Over the top oven plate is placed a removable cast iron plate, affording full protection from the action of the fire. The bottom oven plate is supplied with cast iron braces to prevent warping. The fire box is of good capacity. The end linings being of heavy cast iron and the front and back linings of brick. This has proved to be the most desirable fire box for coal burning that is known. The grates are of the duplex pattern and can be removed without disturbing the fire box linings. The duplex grate for burning coal is of good weight and perfect construction. By reversing it it can be used for ordinary wood burning. The wood grate is especially constructed with a view to greater economy in wood burning. It can be adjusted to meet the exact requirements of the operator. The openings can be regulated so as to increase or lessen the consumption of fuel. A wood extension is also provided, the use of which permits the burning of twenty-four inch wood. The top frames are cut in four sections to prevent cracking or warping. They are bolted together and made to receive panel sections which are interchangeable. An extra heavy post, which is held in position with a bolt, adds to the support of the panels. The size of the top permits the range to be carried through an ordinary door. The balanced oven door is provided with a gravity handle. An oil tempered steel spring in each lower corner gives it a perfect balance and causes it to drop gradually.

The fire door is hinged to swing away from the oven and has a heavy cast iron lining, and gives a large opening for burning wood. The end register is inverted with a view to protection from breakage in shipping. The ash pan is bailed and of generous capacity. Ventilafed base—The space between the oven and the floor is thoroughly ventilated permitting the free circulation of air therein. This feature removes any possibility of overheating the floor. High shelf or closet—Is extra large and well proportioned, and permits of the use of seven-inch pipe.

Guelph Council was Unkind.

The Guelph Foundry Company petitioned the council at their last meeting to grant them the privilege of extending a portion of their proposed new warehouse for nine feet on Paisley street. The matter was referred to the Board of Works and this committee in their report did not express approval so the proposition was not accepted, owing to opposition from some ratepayers.

HEATING AND PLUMBING

BUILDING SITUATION IN MONTREAL.

THERE is little change this week in conditions in the building trades of Montreal. The Stone Cutters' Union are still on strike and the atmosphere is surcharged with rumors of further strikes in the building trades. In another column reference is made to the strike of the House Painters' Union.

For the moment interest centres principally in the demands of the Carpenters' and Joiners' Union. Some little time ago this union formulated a new schedule of wages which was distributed among employes for their signature. This schedule raised the maximum rate from 22½ to 25 cents per hour. The officials of the Builders' Exchange delayed answering this demand and consequently no action was taken on the first of April, when the old agreement expired. A joint meeting of all the local unions in affiliation with the Brotherhood of Carpenters and Joiners was held in Charbonneau's Hall on Tuesday night. No definite action was taken; it was decided not to strike without official sanction from headquarters. The meeting was by no means harmonious and while some "hot heads" were anxious to strike the majority of the six hundred members present were anxious for an amicable agreement.

The master builders are opposed to the new agreement proposed by the men principally on account of the clause demanding recognition of the union. The agreement calls for the employment of union men only and the right of the business agent of the union to visit shops. The employers state that an "open shop" policy is to be carried out.

Stratford Plumbing By-Law.

THE draft of the plumbing by-law has been completed and it will be submitted to the Stratford City Council this evening. It is an exhaustive document, comprising twenty typewritten pages, says the Beacon. The Board of Works have had the matter in hand for some time and they have gone into it thoroughly. The by-law provides, in short, that plumbers shall be licensed, that their work shall be subject to inspection, that pipes of a specified size and weight shall be used for different purposes, connections shall be made in a certain way, the best of ventilation shall be provided, and that all new plumbing shall be properly tested. An important clause, also, is that which will compel manufactories to clarify their waste before turning it into the city sewers.

"There shall be a board of examiners of plumbers, consisting of five members, the mayor, chairman of the Board of Works, chairman of the Board of Health, the medical health officer and the city engineer.

"Every person desiring to engage in, carry on or conduct the business of plumber in this city shall file with the city clerk a petition in writing asking to be licensed as a plumber.

"Every applicant for a license shall satisfy the board that he has attained the age of 21 years, and shall furnish the board of examiners with satisfactory evidence of his reponsibility, and that he is himself a practical plumber, or that he will employ practical and experienced plumbers to do all work, and will not permit any work to be done except by competent workmen.

"The board of examiners shall examine all applicants for license as to their practical knowledge of plumbing, house drainage, ventilation and any other matters as they may deem necessary connected with the trade of plumber.

"The license fee shall be $2.

"No person shall engage in, carry on or conduct the business of plumber except as the employe of a licensed plumber unless he or the partnership firm of which he is a member is the holder of a license.

"The licenses shall expire on December 31 each year.

"The council may from time to time appoint an inspector of plumbing, whose duty it shall be to enforce the terms of the by-law. Until an inspector is appointed this work shall fall to the city engineer.

"The inspector, city engineer, medical health officer, sanitary inspector or any other person appointed for that purpose, shall have the right to enter any premises for the purpose of enforcing compliance with the provisions of the by-law.

"Before proceeding to construct, reconstruct or alter any portion of the drainage, ventilation or water system of any hotel, warehouse, dwelling house or other building, the owner or his agent shall file an application for a permit to do the same, such to be accompanied by a specification or abstract stating the nature of the work to be done, the size, kind and weight of all pipes, etc., and also a plan which shall show the street, street numbers and the drainage system underground.

"No plumber shall perform work until he has satisfied himself that the owner has complied with the above regulation.

"A permit shall be granted or refused within two days after the filing of application and shall be valid for six months.

"All materials used shall be inspected and passed upon by the inspector before work is commenced.

"Each soil pipe or drain shall be so placed as to be always readily inspected without excavation or destruction to walls or floors and the plumber shall be responsible for the connection of his work with the house sewer connection.

"All work shall be done by skilled mechanics, and the inspector shall be the sole judge of it.

"Every water cock, bibb, tap, hydrant attached to any water service or pipe connected with and supplied from the water works system of the city shall bear the name of the maker and shall be tested both as to strength and weight.

"All water pipes shall be laid with due regard to danger from freezing and shall be properly laid and graded with a fall to a stop and waste cock placed in the cellar or other convenient point, where they can be entirely drained off. Each consumer in a tenement building shall be supplied with a separate stop and waste cock on the service pipe inside the building, unless the same is metered.

"The walls or floors where urinals are placed shall be of marble, slate or other non-absorbent materials.

"In no classes of buildings will water closets or urinals be permitted in cellars or basements, without special means of lighting and ventilating being provided and approved by the inspector and medical health officer.

"The liquid wastes from manufactories shall be so clarified or filtered in

When you talk, you want it to go for some good once for all, don't you?

You don't want to be obliged to talk, and argue, and force your goods continually, do you?

You want your goods to do some of the talking themselves, don't you?

RAMSAY'S PAINTS

will do some of the talking themselves, and save you time and worry.

People will pay a fair price for a good thing, and a good thing talks always to the user and to his neighbors.

Ramsay's show cards, newspaper "ads." and posters talk also, because they are attractive, they impress. They don't bluster, they talk confidently.

That helps you!

suitable tanks that all substances injurious to the sewers, or that tend to cause stoppages in the sewers, or that will produce a nuisance, will be completely removed before discharging such wastes into the sewer system. All such sedimentary tanks shall be arranged so that they may be readily examined by the sanitary inspector. This section shall apply to establishments already existing, as well as to any coming hereafter.

"All faulty plumbing work shall be made perfect to the satisfaction of the inspector.

"The entire plumbing system within the buildings must be tested by the plumber in the presence of the inspector.

"In all cases the woodwork shall be permanently removed from the front of each water closet, and the woodwork in front of wash bowls and sinks shall be placed on hinges.

"If a water closet, urinal, sink or other fixture be found in an unclean condition the tenant or owner will be notified and on a recurrence of this state either one will be prosecuted for creating a nuisance."

Building Permits.

TORONTO.

R. Liddell, four attached two-storey brick dwellings on Ulster street, to cost $5,000.

C. W. Coleman, a two-storey brick dwelling on Charles street, to cost $2,500.

POINTERS ON SELLING LOCKS.

"THE clerk who sets out to sell a lock," said a man who has spent his business life in selling these articles to the Hardware Dealers' Magazine, "should first find out just what the lock is to be used for, so that he may understandingly discuss the matter with his customer.

"He should also be in a position to tell his man all about locks, and if he wants to do that he must study them up.

"There are all kinds to choose from. The poor ones are, of course, the cheapest, but lack both in security and durability.

"There are usually three grades of lock in each style. In the cabinet cheaper grade is found the common lock, such as is used on bureau drawers. It has no tumblers, is not warded, and any key will fit it that will enter the keyhole. There are usually four of these on a bureau, and one key is used for unlocking or locking all of them.

"A little better grade of this class is a lock having wards, whereby a number of changes are secured, but these add very little to the security.

"The next class is composed of those having one or two tumblers. They have a greater number of changes, and some security—that is, a little more than the first class, of which I have spoken.

"The better grades are those having a gang of tumblers or levers, and also in this class are the pin tumbler locks. These are the most secure, and of necessity are the more expensive."

"So much for cabinet locks," said the representative, "now how about the other class?"

"The same rules," was the response, "apply practically to locks used in buildings. As an illustration, a four-inch mortise lock that is made and used, in which there are no tumblers.

"A better grade will have wards and one tumbler. In the finer locks such as are used in better class of buildings, the locks are supplied with a gang of tumblers or a pinlock cylinder.

"Much of the greater quantity of locks sold is of course in the cheaper grades. They are made with scarcely any hand labor, the parts fitting loosely, and are assembled by cheap help. In the better grades, when tumblers are used, the labor of mechanics is required and the addition of levers, the putting of the bolts and other handwork makes this class of lock more expensive, although much better, and far more secure."

"How about finishes?"

"The common grades of locks are made of iron, with a lacquer finish. In the better grades of tumbler locks the fronts are made of brass or bronze, which is finished in different styles to match the trimmings used in the building which they are to adorn and secure. In the very fine grades oxidized silver, or in some cases gold plating, are resorted to.

Advertising is the nails and spikes that hold together the structure of a man's business.

"In buying a lock," the speaker continued, "a great many people make mistakes. The burglar or picklock seems to be the only man they think of, and not the man with the bunch of keys A man places a cheap lock on his desk. He says, 'What's the use of a good one? The desk is of wood, and if a man wants to breay into it he can do so with no trouble.' He forgets that a cheap lock will yield to almost any key, that to break in is a risky job, and can be done but once, while the fellow who wants to pry into his secrets can unlock and lock his desk and examine his papers day in or day out, and he be none the wiser.

"I would say to a clerk: 'Sell a man a good lock instead of a cheap one every time you get a chance. He is safer and feels better in the long run.'"

COMPLIMENTS FOR CONCRETE.

It is but a few years ago that the use of cement, or concrete, in the building of foundations, vaults and structural works of a primary character was considered a great advance in building methods, yet within the past two years so wonderful has been the progress made that we have witnessed phenomenal achievements in the application of concrete, causing almost a revolution in many leading departments of structural work, embracing high office buildings, dwellings, public works, municipal improvements, industrial plants, railroads, submarine, mining, ornamental and recreation ground construction.

As a matter of fact, when we see M. E. Ingalls, president of the Big Four railroad, constructing in Cincinnati, Ohio, a fifteen-storey office building entirely of reinforced concrete, and without the use of any structural steel whatever, it is evident that there has been inaugurated a new era in construction. In fact, concrete reinforced by imbedded steel rods, bars or wire rings, has become indispensable to modern building methods, for it does not rust or corrode, like steel, grows stronger with age, and is absolutely fireproof.—The New York Commercial Chronicle.

NOTES OF THE TRADE.

Geo. Robertson, formerly general merchant in Vegreville, N.W.T. has erected a very nice and commodious hardware store in that place. In appearance, with its showroom filled up with machinery, etc., it is quite attractive.

Spence & Fleming, of the Vermilion Trading Co., in Vegreville, are putting up a fine large store in addition to the one they now have at that place. It is understood that Mr. E. L. Poulin is also going to erect another large store in front of the one he now has.

D. D. McPhee, Sr., of D. D. McPhee & Son, general merchants, Alexandria, Ont., has sold out to D. C. Sinclair, late of the Glengarry Mills Co. Donald McPhee, Jr., will remain in the firm, which will be known as McPhee & Sinclair.

John H. M. Robertson, Charles U. Robertson, Alex. A. McMichael, James Robertson and Alex. Robertson, all of Montreal, are applying for incorporation as the James Robertson Co., Limited, with head office in St. John, N.B.

A. E. Coleman has moved his stock of hardware from Manitou, Man., to Darlington, where he has entered into partnership with his brother.

THE British American Fish Corporation, Limited, have been incorporated to engage in fishing operations in a large way, with a capital stock of $500,000. They have sought power to catch fish, own and operate vessels, lumber mills, machinery, elevators, cold storage plants, etc. W. H. E. Jackson, London, Eng., F. H. Markey, Geo. H. Montgomery and K. G. Robertson, Montreal, are provisional directors.

The Berliner Gramophone Co., of Canada, Limited, have been incorporated with a capital of $10,000, to acquire and carry on the business of Emile Berliner, gramophone manufacturer, Montreal, and to do general machinist work.

* * *

The Speight Wagon Co., Limited, Markham, Ont., have been incorporated to manufacture and deal in wagons, sleighs, farm and railroad carts, carriages and vehicles of all descriptions; capital $200,000; directors, T. H. Speight and G. A. Speight, Markham; Thos. Heys and C. H. Heys, Toronto, and C. Kloepfer, Guelph.

* * *

The Canada Wheel Works, Limited, Merritton, Ont., have been incorporated with $100,000 capital to manufacture and deal in shafts, poles, rims, spokes, and other parts of carriages, wagons, sleighs and other vehicles, or any of the parts of carriages, buggies, wagons, sleighs or other vehicles. The provisional directors are F. N. and J. S. Hara, Merritton, and H. H. Collier, St. Catharines.

* * *

A Sydney, N. S., despatch says: "The organization of a company to be known as the Cape Breton Iron and Steel Company, Limited, with capital of $250,000, has been completed for the purpose of manufacturing various iron and steel products from raw materials, which materials are to be supplied by the Dominion Iron and Steel Company. A large portion of the capital is already subscribed and it is proposed to proceed shortly with the construction of the necessary buildings. The first department to be put into operation will be for the manufacture of iron, steel and brass castings of every description and also marine work. About 30 men will be employed. Those connected with the new company are mostly all local men."

Amherst, N. S., has a new industry to be known as the Decoration, Marble and Tiling Co., capital $100,000. The officers are C. A. Lusby, president; E. M. Hutt, manager; H. W. Rogers, secretary-treasurer, pro tem. The company will operate in Amherst, and have already sufficient orders to employ a number of men.

* * *

The bill incorporating the Cascapedia Manufacturing and Trading Company has been reported in the Dominion House. Angus and Hugh McLean, of Buffalo; F. J. H. Eckardt, of Toronto; Senator Edwards and John A. Cameron, Rockland, and Gordon C. Edwards, of Ottawa, are the incorporators. The capital stock is $2,500,000. The company will go into the lumber business in the Gaspe Peninsula.

* * *

The Galt Art Metal Co., Limited, have been incorporated with $100,000 capital, to manufacture, sell and deal in all kinds of sheet metal material for the interior or exterior of buildings, including roofing, siding, ceilings and cornices, with incidental and subsidiary powers; capital $100,000; directors, David Spiers, Frederick Hedley Hayhurst, Hugh McCulloch, William Lutz and Joseph Stauffer, all of Galt.

* * *

The Northern Elevator Company have had plans prepared for the erection of a flour mill in Winnipeg. The materials used in the construction will be concrete, stone and brick, and no money will be spared on either building or equipment in order that everything may be up-to-date. The mill is to have a capacity of 2,500 barrels a day and is to be completed in time to grind this year's crop.

* * *

According to the Winnipeg Free Press the Northern Elevator Company, Winnipeg, have issued a writ against the Lake Huron-Manitoba Milling Company, Goderich, claiming $10,000 damages for the wrongful conversion of 10,000 bushels of wheat, which they say was consigned to the defendants, to be held to the order of plaintiffs, but was conveyed to the defendants' own use.

* * *

NOTES.

A three storey factory will be erected at Louise Bridge, Man., by a new machinery company, work to be started at once.

The Dominion Canning Co., Limited, Toronto, have been incorporated with $100,000 capital to carry on a canning business.

The Elliott, Marr & Co., Limited, London, Ont., have been incorporated to carry on a wholesale grocery business; capital $100,000.

The Toronto Wringer Co. are asking a bonus of $5,000 from Brantford, in consideration of which they would build a factory and plant in Brantford.

The Laidlaw Lumber Co., Limited, Toronto, have been incorporated with $300,000 capital to carry on a general lumbering business in succession to the R. Laidlaw Lumber Co., Sarnia, Ont.

Alsip Bros., builders, Winnipeg, are adding two new brick machines to their yard at Louise Bridge. They expect to turn out over 15,000,000 bricks this season.

The John A. Lang Leather Co., Limited, Ottawa, have been incorporated to carry on a general tannery business; capital $200,000; directors, John A. Lang, Berlin; John A. McGrail, Acton; Denis Murphy, G. S. May and W. C. May, Ottawa.

The Alvinston Flax Co., Limited, have been incorporated to grow and manufacture flax and its products; capital $25,000; directors, T. A. G. Gordon, A. S. Harkness, A. B. Connor, D. C. Munro, Alvinston, Ont., and W. H. Murray, Stratford.

The Queen City Concrete Paving Co., Limited, Toronto, have been incorporated to undertake contracts in paving and road construction and to erect buildings. W. L. Purvis, R. J. Moyes, T. Cosburn, Wm. Brimblecombe and John Preston are the directors; the capital, $40,000.

The Jackson Wagon Co., Limited, St. George, Ont., have been incorporated to manufacture and sell wagons, carts, sleighs, buggies and similar vehicles; capital $100,000; directors, S. G. Kitchen, D. Jackson, J. M. Kitchen, J. R. Hutchison and H. J. Freeman, St. George.

The Hamilton Steel and Iron Company is suing Sayer & Co., Liverpool, England, through Staunton & O'Heir, for $1,669.56 damages for alleged breach of contract in supplying scrap iron that is alleged not to have been up to the specifications.

The Ogilvie Milling Company have purchased additional property at the corner of Dock street and North Wharf, St. John, N.B., which they intend transforming into a modern office building.

The Empire Elevator Company are reported to have closed a contract with a Minneapolis firm for the erection this season of a terminal elevator at Fort William with a capacity of one and three-quarter million bushels.

The Frost Fence Company have taken the sole selling rights for the famous Art Garland stoves and ranges for Canada. This will make a considerable increase in the company's business and will mean an extensive increase in the office and shipping staff.—Welland, Ont., Telegraph.

CURRENT MARKET QUOTATIONS.

April 22. 1904.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Paterson's Wire Edged Ready Roofing

has successfully stood the test of Canada's variable climate for over twenty years, and is the only popular substitute for shingles.

We are advertising the above Roofing extensively in the "Farmers' Magazines" and in all cases we ask prospective customers to order our goods from their local Hardware Merchants.

There will be a very large quantity of our Ready Roofing sold in the future, and you can't blame us if you don't get your share of that trade.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

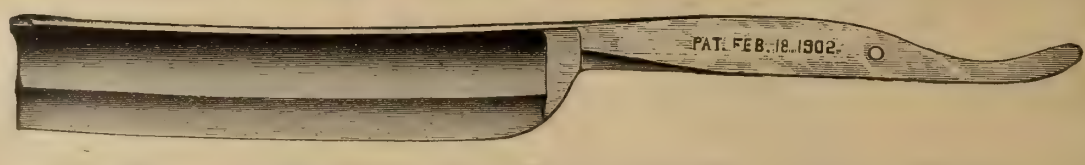
EVOLUTION IN RAZOR GRINDING.

English full hollow ground.



German full concaved.

THE AMERICAN DOUBLE HOLLOW.

Have you ever seen a razor too good to be used on your face?

The old-fashioned way to grind a razor was the English full hollow, but it was found that, if ground thick, it was harsh on the face, if very thin it would vibrate or would not shave clean.

About 30 years ago a new style of grinding was invented, the German full concaved; this was found better; it had only one fault, being thick above the edge it cannot easily be kept sharp on a strop, you have to hone it very often. We are making a newly Patented Razor, the American Double Hollow, which has two distinct hollows. This razor, if properly used on a strop, practically never needs honing, because it is so thin above the edge. Try it and you will be more than pleased.

We Know a Good Hide

AND

You Know a Good Belt

This is the reason why our sales are increasing so fast. We know that the belt can't be right unless the hide is. So we start right. Our buyers are experts who accept only the best hides. Then in the tanning and manufacture we employ our own processes, which are the result of years of experiment. That's why we welcome comparison with any other make of leather belting.

ONEIDA COMMUNITY

(Established 1848)

Largest manufacturers in the world of steel, weldless chain in a variety of links.

As a halter chain they are without an equal, as they possess the exclusive feature of a patented lock ring, which enables the animal to be instantly tied "short" or "long."

Unexcelled for Cow Ties, Dog Leads and Fancy Chains.

In use by all the leading railroads in the U.S. as Pin Chains and for other purposes.

A favorite with the manufacturers of all agricultural implements and makers of windmills. A list of these users would include all the best known firms of the U.S.

Also well adapted to use for padlocks, sewing machines and every purpose for which chains are wanted.

Exported in large and increasing quantities.

None so Blind As Those Who Won't See.

HARDWARE AND METAL can prove of valuable assistance to the selling end of any business which seeks trade among the hardwaremen and general storekeepers of Canada.

We advance many plain, indisputable arguments to this effect.

And still there are some folks who can't see it.

Some who can't see how it's going to pay them.

And won't even invest a few dollars to find out.

Very few folks like this, but we would like to convince even them.

If we only could, we'd get a good deal of satisfaction out of it—and we know they would, too.

Don't you think they're blind to their own interests?

Here's a paper that finds a welcome in every worth-while hardware store from Halifax to Vancouver once every week—so can't you see that an announcement of any interest must surely command some attention?

The advertising columns of HARDWARE AND METAL provide about the best way we know of keeping in close touch with all the hardwaremen of Canada all the time.

You can see value in a paper like this—

Can't you?

BINDER TWINE

IN CANADA

ROYAL BRAND.

There are many Brands of Binder Twine, but "Royal" is the

BEST.

MANY Manufacturers of Binder Twine give names to their various Twines, but we have but one Brand, the "Royal," and we sell our Twine according to Length. If you want 500-foot Twine, ask for "Royal 500"; if you want 550-foot ask for "Royal 550"; also for "Royal 600" and "Royal 650." You thus see that we sell you exactly what you pay for and not a high-sounding, meaningless name.

Every Ball of our Twine is Guaranteed to be of Superior Quality, and

We Stand Right Back of our Guarantee.

GET OUR PRICES BEFORE PLACING ORDERS.

Fact, Fact, Fact, Fact, Fact, ——A String of Facts.

Think on these things—things relating to Lawn Mowers.

1. Foreign Made Lawn Mowers sold in Canada are, as a general thing, inferior Mowers, and soon get out of order.

This is a fact.

2. To get repairs for Foreign Made Mowers is troublesome and costly.

This is a fact.

3. 95 per cent. of the jobbing trade of the Dominion sell Taylor-Forbes Lawn Mowers.

This is a fact.

4. Taylor-Forbes Mowers are guaranteed, and repairs are quickly and cheaply obtainable.

This is a fact.

5. Orders placed with your jobber are filled the same day as orders are received.

This is a fact.

Don't delay the sending of the order, though. Send for Catalogue "B."

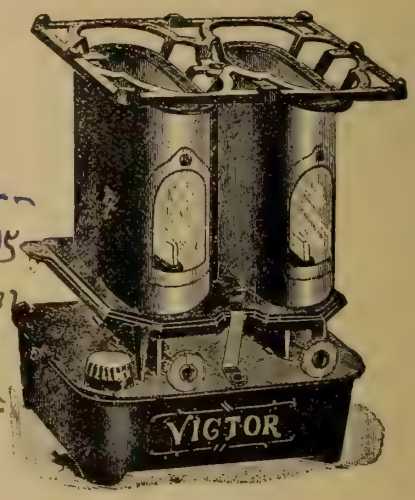
GUELPH, CANADA.

The largest manufacturers of Hardware in Canada.

A FEW COLD FACTS

about our

"Victor" Oil Stoves



They are the result of years of practical experience.
They give perfect satisfaction.
No leakage. No smoke. No smell.
Large wick 4½-in. wide.
Large cast-iron bottoms nicely japanned.

All the points which help to make a perfect stove are embodied in them, consequently our trade is rapidly increasing. You will increase your sales by handling this line.

Made in one, two, and three burners.

We can also supply the "DAISY" OIL STOVE, which is made exactly similar to the "VICTOR," except that it is supplied with a tin oil reservoir in place of cast iron.

We will be pleased to quote you.

The Competition of Catalogue Houses

By The Norvell-Shapleigh Hardware Co., St. Louis.

IN the following article a feature of retailing which has revolutionized trade in the United States in a large degree and which is bound to have a powerful influence on trading in Canada in the years to come is discussed. It is worthy of the careful attention of every reader of Hardware and Metal, manufacturer, jobber and retailer.—Editor Hardware and Metal.

A catalogue house in Chicago selling direct to consumers has recently issued a decidedly interesting catalogue. It is offered for sale at 50 cents per copy—it is well worth the price. Every hardware, cutlery and sporting goods manufacturer, every jobber and every retailer should secure a copy of this catalogue and carefully study its contents. This house do not seek the business of dealers; their business is derived directly from consumers. They do a strictly retail business—cash in advance. They break boxes. They will sell a single item of anything in their line.

We suggest you mark up this book with your cost and selling price opposite each item where it is possible to make comparisons. On many lines the manufacturers' names are plainly stated; the proper numbers and description of the goods are entered. Among them are some of the best known in the country. Some of these manufacturers are represented by only a few of their most staple goods; in other cases almost their entire line is catalogued. There is an effort on some lines to disguise the goods by using fictitious names. Where no names at all are given many goods are to be recognized by their numbers, description or by the cuts used. Almost everything in the hardware line is offered for sale from axes to zinc.

A careful study of the prices entered on standard goods leads to the conclusion that if a jobber adds a fair profit on these goods in selling the retailer and if the retailer adds a reasonable profit in selling the consumer it is impossible for the retailer to profitably compete with this catalogue house. In making these statements please bear in mind we are referring to those goods that are sold openly under manufacturers' names; they do not refer to other goods disguised by fictitious names. It is evident that these well-known manufacturers' lines are used as drawing cards. The consumer who studies the catalogue is expected to judge all the prices in the line by those quoted on these old established brands.

The question of catalogue house competition some may think is an old story, but we wish to ask the hardware jobbers and retailers who read this article—especially the larger jobbers and more especially the heads of these larger jobbing houses—How thoroughly have you yourself studied these catalogues? How much serious thought have you given this subject? This letter is written not with the idea of presenting anything new, but in the hope of more forcibly emphasizing the questions involved with the men who control the affairs of the leading jobbers and retailers of the country.

We have before us to-day three systems of distributing merchandise:

1. The old and established system of manufacturers supplying jobbers, jobbers supplying retailers, and retailers supplying consumers.

2. The system that has developed in recen years of manufacturers supplying catalogue houses and catalogue houses supplying consumers.

3. The still more recent system, which so fas is limited to a few lines, of manufacturers supplying consumers direct.

In the first system the manufacturer, the jobber and the retailer each derives a profit. In the second system the jobber and the retailer are eliminated, the catalogue house taking the place of both jobber and retailer. In the third system all parties to the transaction are eliminated except the manufacturer and the consumer.

Speaking broadly, we believe we are safe in claiming that the manufactures of this country have been built up on the business of the jobbers; the jobbers in turn have derived their support from the patronage of the retail dealers; the retail dealers in turn have lived upon the business of the consumers of the community. Granting these facts as being generally true, the whole matter simmers down to a question as to which system of distribution must obtain in the future. If the jobber and the retailer are finally eliminated, the next question to arise will naturally be the elimination of the catalogue house by the manufacturers selling direct to the consumer; but that is too far in the future to concern us at present.

The system of distribution by the catalogue house and the distribution by jobbers and retailers are antagonistic and at war with each other. Either one or the other must survive; the two systems cannot flourish side by side in the sale of the same lines of goods. It is not a question of right or wrong. The catalogue house has just as much right to buy goods and sell them as the jobber or the retailer. Their business is just as honorable as ours, and we think all questions of their right, of their honesty, etc., etc., should be entirely eliminated from a fair and impartial discussion of the principles at issue.

It seems to us in this case the jobbers and retailers are in the same position as a nation whose territory has been invaded by an enemy. Shall they quietly and cheerfully allow this enemy not only to absorb their territory, but complacently look on while he grows stronger from has already acquired? It strikes us it is high time for the jobbers and the retailers to devise some plan to drive these invaders from within the borders of their country. This is a question where the interests of the jobber and the retailer are identical; it is common ground on which they can and should work in harmony.

If many of the leading manufacturers of the country have decided to continue their present policy of selling to and encouraging the development of catalogue houses this system of selling goods will, of course, increase. Unless these manufacturers can be convinced that it is not to their interest to sell such houses, those already in the business will not only increase in power, but other houses of the same nature will be established in all the larger trade centres of the United States. Then when the number of these houses largely increases naturally competition between

them will be greater, and as a result goods will be sold on still closer margins. When they are sufficiently powerful the parcel post will follow. We already have the rural free delivery. Now imagine the condition of the retail dealer when every farmer and mechanic in the land will be liberally supplied with these catalogues and can order what he wants and can have it delivered at his door by the Post Office Department in lots of 25 or 50 pounds at a time! It would seem to the most casual observer that such a system would mean not only the elimination of the retail dealer, but the practical depopulation of our present flourishing small cities and towns and the building up of great congested trade centres.

The jobber, of course, could escape the fate of the retail dealer by discharging his salesmen and turning his organization into a catalogue house, going direct to the consumer for his business.

These catalogue houses in their infancy bought goods from the jobbers; the jobbers were short-sighted in selling them. Just as soon, however, as their purchases reached respectable proportions they went to the manufacturers. To-day the quantity of goods sold by the jobbers to these catalogue houses cuts very little figure in the volume of a jobber's business. The jobber cannot sell them, because the manufacturers have placed such houses on the same basis and in some cases upon a lower basis than the jobbers themselves. In the beginning these houses used the jobbers as a convenience; the jobbers were satisfied with the present, not considering the future. It is a matter of record that such houses now control the output of manufacturers or even own these factories themselves. Therefore, the manufacturers have in a number of instances suffered the fate of the jobbers.

A study of this catalogue brings to our minds a number of interesting questions. One of the most prominent of them is suggested by the prices entered on certain well-known brands of edge tools. These prices are about the same as the jobber is bound by this manufacturer to sell the same tool to the retail dealer. Please note this carefully. This manufacturer's tools are entered in the catalogue under his own name, and the price opposite the tool is practically the same as this manufacturer insists upon the jobber maintaining in selling the retailer. Truly a remarkable state of affairs! We are told that 98 per cent. of the output of this line of goods is controlled by one selling arrangement. Therefore, the usual excuse that if they did not sell these goods to the catalogue house some other manufacturer would hardly holds good. It is also to be noted that while the jobber on this line is positively prohibited from warranting them this catalogue house come out in great headlines selling these goods under a warrant. They sell the goods to the consumer at exactly the same price the jobber is permitted to sell them to the retailer; they sell them under the manufacturer's own brands; they sell them on a warrant, while the jobber is not allowed to do so. Ye gods and little fishes!

There are other lines in this catalogue, not only in hardware but also in sporting goods, on which the difference between the prices the manufacturers have established for the jobber to sell the retailer and the prices entered in the catalogue is so slight that it would not pay the freight on the goods.

All of us must admit that the jobber is under some obligation to his retail customer. His success and prosperity depend upon him. Now any manufacturer who permits his goods to be entered in this catalogue at such prices evidently has forgotten all about the interests of the retail dealer. The jobber has been taken care of, but no one seems to have considered the interests of the retail dealer. The jobber is between two fires: On one side the manufacturer asks him to maintain certain fixed selling prices to the retail trade. If the jobber maintains these prices, then he cannot sell the retail dealer at prices which will permit his customer—the retailer—to compete with the catalogue house. Therefore it follows as a natural result that the retailer will lose the business and it will be taken by the catalogue house. The question I wish to propound is, Where does the jobber's greatest obligation lie? Is it to the manufacturer from whom he buys his goods or to the retail dealer from whom he derives his support?

When a manufacturer sells a catalogue house his own brands of goods under his own name he does not increase the consumption of these goods. If a demand is established on these lines the goods will be called for, and if the catalogue house did not get the business it would be secured by the retailer, and the goods would be supplied by the jobber. Catalogue houses do not create a demand for goods; the demand has been created by others, and they take the business by underselling the retailer. The manufacturer in selling the catalogue house simply changes the channel of trade. Many of the articles shown in the catalogue under review are patented; they can only be obtained from one manufacturer. All the business this manufacturer obtains from the catalogue house is not new business, it is not created business, but simply business which has been diverted from the retail dealer and the jobber. Why should the manufacturer prefer to sell these goods to the catalogue house instead of to the jobber? Why should it be his preference to divert a certain amount of this business from the usual channels? How can such a manufacturer claim to be friendly to the jobber and to the retail dealer and to have their interests at heart when he deliberately, by his example and influence, encourages a system that menaces the very existence of the jobbing and retail interests? How can he in reason and in fairness expect jobbers and retailers to feel friendly toward him and his goods when he follows this course?

We have read in the trade papers of the proceedings of the National Jobbers' Association. We have read of the numerous meetings of the retail hardware dealers' associations. Nevertheless, immediately following all these meetings we have before us this catalogue in which the line of goods shown is more varied and extensive than ever before, and in which the prices, we believe, are more radical. The jobbers' and retailers' associations up to this time, judging from this catalogue, have not made any deep impression upon the minds of a number of manufacturers whose names and goods appear so prominently in this catalogue. It seems to the writer they have lost force and strength by scattering their efforts among too many issues.

The question should be, What is the greatest issue to-day before the jobbers and retailers? In our opinion it is "catalogue house competition." Then,

WIRE NAILS
TACKS
WIRE
Prompt Shipment
The ONTARIO TACK CO.
Limited
HAMILTON, ONT.

if this is the greatest question. why cannot the jobbers and retailers, in defense of their mutual interests, come together on this one issue? Jobbers and retailers may differ among themselves in regard to many matters, but we believe this is one issue upon which we can all unite.

This article is written under the name of this company. There may be answers. There are two sides to every question. It is only fair that any answers should be properly signed so we will know their authors. We remember some time ago a discussion in these columns in regard to special brands, where one house wrote all its articles over its own name, while all the answers were anonymous, which, of course, was hardly a square deal.

CATALOGUES, BOOKLETS, ETC.

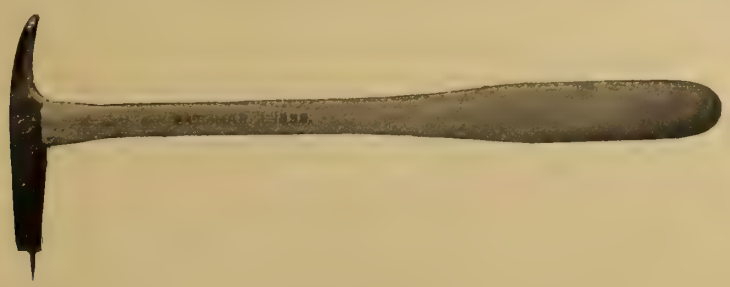
For the convenience of its readers HARDWARE AND METAL has opened its columns for the review of catalogues, booklets or other such publications issued by manufacturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. It is requested that when any of the trade write for any booklet mentioned in these columns that they credit HARDWARE AND METAL as the source of their information.

Screen Cloth Measurements.

THE B. Greening Wire Co., having had frequent enquiries by the retail trade for a table showing the number of square feet in a given length of screen cloth, have prepared a table showing at a glance the number of square feet in any length from 1 ft. to 100 ft., of all the widths of cloth that they manufacture, i. e., every 2 in. from 18 in. to 42 in., and then to 48 in., in either green or black, 50 or 100 lineal ft. rolls. Screen cloth is sold by the square foot and such a variety of widths is kept by all retail merchants. As the selling is invariably marked by the lineal yard or foot it entails considerable figuring, which is a source of annoyance when the clerk has two or three customers waiting for his attention, so the table should be of exceptional convenience. The firm state they will be pleased to send one of these tables to any retail merchant who takes sufficient interest in it to ask for same.

Magnetic Tack Hammer.

The Savage Arms Co., Utica, N. Y., are offering the trade a tack hammer which should win some attention. A



horse-shoe magnet made of the finest steel forms a solid head, while at the upper end is a powerful tack puller. The retail price is 25c, and a liberal discount is allowed the trade.

Mantels, Tiles, Fireplaces.

The Batty Stove and Hardware Co., Toronto, have in their advertising in Hardware and Metal paid a great deal of attention to wood mantels, tiles and fireplaces. This firm have learned that the hardwareman, after he had made sufficient study of the subject, is the best agent for the sale of mantels that could be secured. In order to assist in the most practical manner the retailer desiring to study this line and at the same time to furnish him with the necessary data for making sales, the Batty Co. have prepared an exhaustive catalogue giving beautiful half-tone engravings of the many types of mantels, grates, tiles, fireplaces and supplies, such as andirons, fenders, fire sets, etc. Any hardware dealer who has not a copy of this catalogue should get one and see if he could not secure through this line a profitable connection.

The New Marlin Repeaters.

The Marlin Arms Co., New Haven, Conn., have completed arrangements for placing on the market a line of repeaters to be known among the trade as "Great B." These rifles will be in every respect similar to the regular model, 1903, except that the barrels will be made of soft gun-barrel steel instead of their quoted special smokeless steel. The intention is to meet the large demand for a high class, carefully made arm on the part of the many shooters who are not sufficiently interested in the smokeless steel barrels to pay for the extra cost. The new line is, of course, not intended for high power smokeless ammunition, and its use in this grade is not advised by the makers; only black powder ammunition and equivalent loads such as low power smokeless should be used

MACHINERY

THE MACHINERV MARKETS.

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, April 29, 1904.

THERE is a slight improvement in general machinery business this week as compared with last, but the increase is by no means marked. The backward season has affected the machinery market more, perhaps, than any other, and dealers and manufacturers are still waiting anxiously for a general improvement. A few orders, small individually, but large enough in the aggregate, have been actually closed this week, and the trade are tendering for some contracts of considerable magnitude. Prospects seem a little better this week than last and there is a slightly better feeling among the trade.

As for so many weeks, the demand has been principally for engines and boilers. There have been no very large sales this week, but the demand has continued steady with no particular features of interest to note. Sawmill supplies are still being called for. The machine tool market is quiet and featureless.

Ontario.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, April 29, 1904

AN improvement is noted in all lines this week. Several buyers have been in the city from various points and their purchases, together with salesmen's orders, run up to a satisfactory figure.

The fire has caused some buying, too. One machinery house reports a good order for iron-working machinery from the Henderson Ball Bearing Co., one of the sufferers.

Business is well divided, boilers, engines, iron-working and wood-working machinery all being in demand. Prices are being well maintained as a better feeling seems to be prevailing in the United States market.

W. H. Petrie's Warehouse.

ONE of the most unusual yet one of the most practical and effective machinery warehouses in Canada is that of H. W. Petrie, Toronto. The building was formerly known as "The Cyclorama Building," and was designed for displaying pictures. From the accompanying view it will be seen, however, that such a spacious building lends itself in an exceptionally happy manner as a machinery warehouse.

The building is but a few steaps from the Union Station, and as it runs all the way from Station street to Front street, and is always open, it is ever a busy thoroughfare. From the platform at the north end a splendid view of the engines, pumps, iron-working and wood-working machinery on display can be had.

Proof of the advantage of such a warehouse is given in the fact that H. W. Petrie's sales have more than trebled since he moved into these premises.

W. H. Petrie's Warehouse.

A Big Wire Contract.

The Standard Construction Company of Montreal are developing water power in the Murray River, above the Village of Murray Bay, for the purpose of generating and supplying electric light and power to a number of villages on the north shore of the St. Lawrence. These include Murray Bay, Cap-a-l'aigle, Pointe-a-Pic and St. Irenee. In connection therewith this company will erect a transmission line to connect the above villages with the power house. Over 16 miles of copper wire, or about 50 tons, are required for this purpose, and the contract for supplying same has been secured by the Dominion Wire Company. This wire and electrical machinery will be taken down by special steamer from Quebec before the regular river boats commence to run. A number of workmen are going with the shipment and the work will be completed early in June before the opening of the tourist season.

MACHINERY AND ELECTRICAL NOTES.

St. Thomas, Ont., is considering taking over either the local electric or gas plants, or both.

Levy, Weston & McLean have sold a complete planing mill outfit to G. E. Mickleboro, Regina, N. W. T.

Mitchell, Ont., has passed a by-law to raise $10,000 for electric light and waterworks improvements.

The Petrie Machine Co., Guelph, Ont. have not yet decided where they will establish their new works.

The Mansfield Glass Works, of New York, with a capital of $200,000, and employing about 150 men, have decided to establish a Canadian branch in Hamilton.

The Dominion Government have bought a site from the city of Toronto upon which will be erected a $25,000 pneumatic tube postal delivery power plant.

C. H. Carter has issued a writ at Osgoode Hall against William Wythe to bring about a dissolution of partnership in the business on George street, known as the Toronto Machine Tool Co.

The employes of James Warnock & Co., axe manufacturers, Galt, Ont., presented F. H. Hayhurst with a gold-headed cane on the occasion of his departure from that company to enter the Galt Art Metal Co.

The Alberta Electrical Supply and Construction Co. have been organized in Edmonton, N.W.T., with E. S. Harrison as president, and W. J. Richardson as secretary-treasurer. The company is capitalized at $50,000 and will erect a suitable building for the purpose of dealing in electric fixtures, etc.

A contract has recently been given for the construction of a plant for the London, St. Thomas and Port Stanley Railway in the hands of the Canadian Electric Traction Company. It was given to the Bruce Peeble Co., of Edinburgh, against a host of American contractors. The total cost of the contract is about £42,250.

The Chief Commissioner of Public Works, Fredericton, N.B., is calling for tenders for the following road plant, now owned by the Government: One rock crusher and steam roller, one Canadian steam hand drill, one engine and locomotive and two wagons. The steam roller is there, and it is understood the city authorities will put in a tender.

The new shops of the Goldie & McCulloch Co., Galt, Ont., will be over 300 feet long, will be built largely of structural steel and other material, and will be equipped with the most modern machinery in the world for boiler manufacture. The shops will be at Hunter's Corners, between the lines of the Grand Trunk and the Galt, Preston and Hespeler Street Railway.

H. W. Petrie, Toronto, has sold a 300 h. p. Corliss automatic engine to the Toronto Electric Light Co.; a 22 ft. engine lathe to A. Knowles, London; two wood planes, a saw-table and a heavy power mortising and boring machine to the Toronto Street Railway Co.; two engines to the Economical Gas Co., Toronto and Hamilton; a Lane sawmill and a 50 h. p. engine and boiler to Wagar & Fenwick, Enterprise, Ont.

The Niagara Falls Council passed the following resolution last week: "Whereas, it has ben learned that there is a petition being circulated asking the Dominion Government to place an export duty on the exportation of electrical power from this country, be it resolved that this council do not endorse such petition, as we believe it to be not in the best interest of this city and province."

The Ontario Wind Engine and Pump Co. made a shipment of two of their well known airmotor outfits recently to Paris, France, and this is only part shipment of order received from their representative in that city. This is the result of exhibit at the Paris Exhibition in 1900, where they were awarded a medal for their goods. Also from Labrador this company have received an enquiry for their goods.

W. B. Russell, C.E., resident engineer of the Tamiskaming Railway, states that 30 miles of the proposed extension of the line from New Liskeard to Lake Abittibi have been surveyed and the remainder of the 90 miles to where the new Grand Trunk Pacific will cross, near the Abittibi, will be located, and everything ready, so that the commissioners may, if they so decide, call for tenders for the extension some time next month. Mr. Russell says that after reaching the height of land north of New Liskeard and near to the source of the Blanche River the grade is very easy, less even that the Grand Trunk Pacific engineers find in their western extension.

Opening for Steel Works.

IN speaking of the probability of the erection of iron and steel works at Port Townsend, Washington Territory, U.S., the Victoria Times says: With the development of railway building in the Canadian West at the present time, it is pointed out that there is a constantly increasing demand for iron and steel on this side of the international boundary line. There is held to be a good market in the Orient for the product. The manufacture of the iron in the United States from Vancouver Island ores is handicapped also by an import duty of 40 cents a ton on all imported. In addition to this the Dominion Government gives a bounty on all iron and steel made in Canada which varies from $2 to $3 a ton.

If the ores of the Island are to be held in this province for manufacture it is essential that something be done to interest capital in the matter before works are established on the other side of the line which will consume the raw material produced from the mines of British Columbia.

——

A Merger of Mining Concerns.

The Montreal and Boston Consolidated Mining and Smelting Co. is seeking incorporation in Ontario with a capital of seven million five hundred thousand dollars for the purpose of developing and operating copper and gold mines and smelters in British Columbia. The company will continue the old Montreal and Boston Co. which included the Dominion Copper Co., the Morrison Mines, the Athelston and Jackpot Gold Mining Co., and three-quarter interest in the Emma Mine, all of which companies have been operating producing properties.

After the organization is completed important additions will be made to the smelter plant operated by the companies including an additional furnace and a converter plant that will give a capacity of 1,500 tons per day. All the smelting operations will be performed at Boundary Falls. An effort will be made to secure a British Columbia coal mining property to use in conjunction with the smelter plant.

Among the men interested in the deal are H. H. Melville, Boston, vice-president of the Great Northern Railway of Canada; J. W. Allison, New York, president of the National Leather Company; John F. Plummer, New York; J. N. Greenshields, Montreal, president of the Shawinigan Water and Power Com-

An authoritative report of patents granted by the Canadian Patent Office for recipes and devises of interest to HARDWARE AND METAL readers.

Smoke Consumer.

GRANTED Orme Dobbin, Waterloo. Claims—1. In a furnace for steam boilers, a grate, means for delivering a blast of heated air onto the grate, and a superheater in rear of the grate to receive heated air from an independent source, and comprising smoke flues, said superheater being arranged to direct the heated air into the smoke flues.

2. In a furnace for steam boilers, a fire box, a grate therein depressed at its rear end to form a fire back at rear of grate, a superheater built of fire brick in rear of the grate, an air chamber receiving heated air through channels in the walls of the fire box and delivering same to the superheater, said chamber being located in rear of the fire back to receive heat therefrom.

3. In combination with a steam boiler furnace and a fire box therein, of a superheater in rear of the fire box, and a channel formed in the side wall of the fire box, to supply air to the superheater, said channel being arranged in Z-form to compel the in-going air to travel back and forth in the walls of the fire box for initial heating.

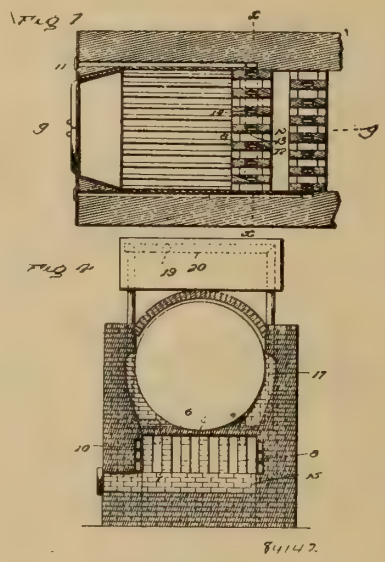
4. In a furnace for steam boilers, a superheater built in the bridge wall thereof, said superheater comprising layers of the fire brick, centrally cut out and arranged with a space between the adjacent edges of the contiguous brick of each layer.

5. In a furnace for steam boilers, a superheater built in the bridge wall, said superheater comprising an air chamber, and vertical hollow piers arranged above the chamber, the piers being built of layers of two bricks each, each brick of a layer being cut out for a portion of its depth and arranged with said cut out portions contiguous and with a space between the contiguous faces.

6. In a furnace for steam boilers, means for delivering two individual blasts of hot air to the fuel, and a superheater arranged to receive a separate supply of heated air and deliver same to the smoke flues, and a combustion chamber in rear of the superheater.

8. In a furnace for steam boilers, a grate, means for delivering a blast of heated air onto the grate, and a superheater in rear of the grate to receive heated air from an independent source, said superheater being arranged to direct the heated air into the smoke flues, in a thin unbroken stream co-extensive with the height of the smoke flues.

9. In a furnace for steam boilers, a fire box, a grate therein depressed at its rear end to form a fire back at rear of the grate, a superheater built of fire brick in rear of the grate, an air chamber receiving heated air through channels in the walls of the fire box and delivering same to the superheater, said chamber being located in rear of the fire back to receive heat therefrom, and a channel from the superheater to the



smoke flues formed by spacing the contiguous bricks of the superheater.

10. In a furnace for steam boilers, a fire box, a grate therein depressed at its rear end to form a fire back at the rear of the grate, a superheater built of fire brick in rear of the grate, an air chamber receiving heated air through channels in the walls of the fire box and delivering same to the superheater, said chamber being located in rear of the fire back to receive the heat therefrom, and a channel lengthwise of the superheater and co-extensive with the height of the smoke flues, said channel being formed by spacing the contiguous faces of the brick in setting the superheater.

11. In a steam boiler furnace, the combination, the fire box, a smoke passage therefrom, a cross pipe in said passage having an air inlet opening, air heating pipes arranged longitudinally in said smoke passage and receiving the air from said cross pipe, and means delivering the heated air from said longitudinal pipes into the fire box above the burning fuel therein.

12. In a steam boiler furnace, in combination, the fire box, a smoke passage therefrom comprising a horizontal smoke flue above the boiler, a boiler, air heating pipes arranged longitudinally in said flue, means delivering air to the rear or coolest ends of said pipes and means delivering the heated air from the front or hottest ends of said pipes down onto the burning fuel in said fire box.

13. In a steam boiler furnace, in combination, a fire box, smoke a passage therefrom comprising a horizontal smoke flue, air heating pipes arranged in said flue, an air chamber into which said pipes discharge, said chamber having a downwardly directed air discharge at the front of the fire box and above the burning fuel.

14. In a steam boiler furnace, in combination, the fire box, and a fire door having air openings therethrough and an inner lining forming an air heating chamber at the inner side of the door with a narrow bottom discharge into the fire box.

15. In a steam boiler furnace, in combination, a fire box, a pair of air superheaters immediately in rear of the fire box and having the smoke flues therethrough, a combustion chamber between said superheaters and into which said flues open, and means discharging air into the superheaters and distributing the same into said flues.

16. In a steam boiler furnace, in combination, a fire box, a boiler, a pair of air superheaters in rear of the fire box and having smoke flues therethrough, abutments extending up along the boiler from the rear superheater, said superheaters formed with air passages opening into said flues, means supplying air to said passages, the front superheater forming the fire back.

17. In a steam boiler furnace, in combination, a fire box, a wall in rear thereof formed with a multiplicity of horizontal smoke flues, the walls thereof having elongated vertical narrow air discharge stilts, and means supplying air thereto.

pany, and Thomas Crockett, of Riviere du Loup. Mr. Greenshields is the attorney in the consolidation. The head office of the new company will be in New York, but a branch will be operated in Montreal.

Now Ready to Make Billets.

A Sydney, N. S., despatch says that the first of the small size billets was made at the continuous billet mill of the Dominion Iron and Steel Company, the product proving all that could be desired. The mill has just been completed by the Morgan Construction Company of Worcester, Mass., and is considered to be one of the finest and best plants on the continent. Several experts were present at the time the billet went through and it was pronounced by them to be one of the finest pieces of steel they had ever seen. The billet was elongated from four inches square to sixty feet. The machinery in use at the mill is of the most modern type. Five different sizes of billets can be made by simply alternating the rolls, five sets only of which are in use while most mills have eleven and twelve.

The rolling of the first billet marks another important forward movement in the operations at Sydney of the Dominion Iron and Steel Company. The matter of steel rail making is now only a question of the installation of the necessary machinery and appliances.

Toronto Fire Creates a Demand.

Several of the firms who suffered severe damage to their machinery by the fire in Toronto last week have not lost much time in getting busy on equipping their temporary plants. H. W. Petrie, Toronto, has received orders for iron working machinery from W. J. Gage & Co., and for a saw-table from the Carter-Crume Co. The big order, however, came from the Henderson Roller Bearing Co., who on the day after the fire bought a carload of lathes, and have since the fire bought in all $25,000 worth of machinery.

A RIFLE WITHOUT AMMUNITION.

A rifle requires ammunition to do execution, but it may now be used satisfactorily for target practice with neither bullet nor powder, owing to a recent skillful invention named the "sub-target gun machine." In using this device the rifleman holds the weapon and aims it at a distant target as usual, but when he pulls the trigger a miniature target beneath the rifle is thrust against a scoring-needle, making precisely the same record that would have been made by the bullet on the real target had the gun been actually discharged. The machine, which was used at the recent Fort Riley manoeuvres, is said to be satisfactory and valuable.—Success.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

AGENCY WANTED.

AN established Manufacturers' Agent in Montreal representing several large American houses, with representatives covering all Canadian territory, wishes to secure a good Canadian manufacturer's line in Hardware or Specialties. Address Box 102, HARDWARE AND METAL, Montreal. (20)

A PARTY at present acting as assistant manager for an old-established English hardware importing house, would like to obtain agencies for English, Canadian and American firms. Address "Agent," c/o. The H. R Ives Co., Limited, Montreal. (18)

CANADIAN manufacturers desirous of being well represented in B.C., the Yukon and Alberta and open to exploit the oriental markets are invited to communicate. We know the territory. Have you the goods? HARDWARE, Box 367, Vancouver. (21)

BUSINESS FOR SALE

HARDWARE BUSINESS—About $4,000, in largest mining town in New Ontario. For particulars address Horne & Hardy, Copper Cliff. (24)

PLUMBING, tinsmithing and hardware business, established 1892. Everything must be sold at once. J. D. Murdoch & Co., Simcoe, Ont. (20)

FOR SALE.

TWO HARDWARE STOCKS in Manitoba; important implement agencies in connection; reason for selling, attention required to other lines; both good opportunities for money making; one stock will invoice about $5,500, other $2,500; good trade established and will bear investigation; write now. Marshall-Wells Company, Wholesale Hardware, Winnipeg, Man. (19)

ARTICLES WANTED.

WANTED—Good second-hand cornice brake; send particulars and price to G. A. McMurtry, St. Thomas. (18)

SITUATION VACANT.

MOULDERS WANTED—A few good steady bench hands for fine light work; also apprentices and improvers; steady employment and highest wages; handy men can earn over $2.50 per day. Taylor-Forbes Co., Guelph. f

STENOGRAPHER WANTED—In Winnipeg whol sale house for correspondence, with experience in hardware invoicing; good opening for rapid operator; state experience and salary expected. Apply Box 125, HARDWARE AND METAL, Toronto. (18)

STOVE manufacturer wants young practical man with experience to assist superintendent. Address, Box 126, HARDWARE AND METAL, Toronto.

TINSMITH—To take charge of shop; prefer one who can attend to store; state wages and experience. Geo, M. Shepardson, Sombra, Ont. f

WANTED—A boy with two or three years experience at tinsmith trade; please state wages and reference to C. B. Miner, Cobden, Ont. (19)

WANTED—A gauge lathe hand; one with some experience on a shaper preferred. Apply, stating wages, Coombe & Watson Kincardine. f

SITUATIONS WANTED.

HARDWARE clerk wishes to obtain situation at once, either in Manitoba or the Territories; ten years' general experience, with best references. Address S. C. Wright, Milestone, Assa. (19)

YOUNG MAN with experience in builders' and general hardware, desires position for improvement. Box 128, HARDWARE AND METAL, Toronto. (18)

MACHINERY FOR SALE.

Special rates will be quoted for notices under this heading for periods of three months or longer.

THE MacGREGOR, GOURLAY COMPANY, Limited, Galt, have in stock for prompt shipment the following machine tools:—Drills—20" —20" power feed—25" upright. Shapers—24" x 30", 16" x 20", 10" x 15". Lathes—16" x 10", 18' x 10". Planer—24" x 24" x 6'. Also the following second-hand refitted machine tools:—Planer—36" x 36" x 9' Sellar's drive. Milling machine—17" travel to table. Lathes—14" x 6' —15" x 6'—15" x 7'.

THE FAIRBANKS CO.—Temporary warehouse, 124 Bay—standard scales, valves, trucks, letter presses, shafting, hangers, pulleys belting, mill supplies, machine tools; "Fairbanks" gas and gasoline engines; write for price list.

DODGE MANUFACTURING COMPANY, of Toronto, Limited, manufacturers of all kinds of power transmission machinery, and appliances for mills, factories and power plants; all kinds castings and machine work; send for our complete catalogue. Dodge Manufacturing Co., temporary premises, 116 Bay street, Toronto.

THE A. R. WILLIAMS MACHINERY CO., Limited, Toronto, 35 h.-p engine and boiler on wheels, new; 15" x 34" Wheelock engine, in good order; 10" x 10" New Bell automatic engine; 7" x 10" double cyl. hoisting engine, new; 72" x 16' new stationary boiler.

MACHINERY WANTED.

Notices under this heading inserted free for subscribers to HARDWARE AND METAL.

BOILER—Thirty to 35 horse power, hundred and fifty pounds cold water pressure. Myers Co., Saulter street, Toronto.

COFFEE MACHINERY—A manufacturing concern wants coffee roasting and grinding machinery. Address Box 129, HARDWARE AND METAL, Toronto.

GASOLINE ENGINE — Second-hand, four-horse. T. Riddolls, Drayton, Ont.

LATHE WANTED—About 10 in. swing and 30 in. between centres; screw cutting, back-geared, cross feed, countershaft and chucks; must be in good condition. Mr. Archer, Gale Manufacturing Co., 142 Front street west, Toronto.

SECOND-HAND power shears wanted for light work. Send price and particulars to Dennis Wire and Iron Co., London, Ont.

SECOND-HAND swing shingle machine; state price. Box 50, Fordwich.

WHEN YOU BUILD A NEW BARN

Roof it with Corrugated Galvanized Steel Sheets, in 8 ft. lengths. They are applied over sheeting or direct to rafters, making a light strong covering. Very lasting; lightning and fire proof.

AN UNWARRANTED ADVANCE.

The action of the Toronto Board of Fire Underwriters in making an advance of from 25 to 100 per cent. in their rates as a sequence of the Toronto fire, was as unjust as it was unnecessary.

The action of the Canadian Manufacturers' Association, in determining to oppose to the last step this advance, was as reasonable as it was right.

It is to be hoped that the Canadian Manufacturers' Association will have the unanimous determined support of all classes of business men in the matter.

SYMPATHY IN BUSINESS ADVERSITY.

IT is in the moment of danger or disaster that the better side of human nature is brought into action. It is the same in business as in private life.

When the weather is fair rivalry is keen and the efforts of the thoughtful business man are concentrated upon the purpose to outstrip his competitor.

The disastrous fire which visited Toronto a couple of weeks ago showed that among the business men there "Friendship, peculiar boon of heaven," is not an "obsolete sentiment," as Carlyle declared it to be.

Every general wholesale dry goods house but one, every wholesale furrier and hatter, every wholesale stationery and paper house, two of the leading wholesale metal and hardware firms, to say nothing of many others, were reduced to ashes.

But those who under cold business conditions might have benefitted by the calamity which had befallen their business competitors were indisposed to do so. The promptness with which they come forward with offers of assistance was astonishing.

Merchandise was loaned to fill urgent orders, parts of offices, warehouses and factories were shared with firms who had hitherto been keen rivals. In the hour of necessity the spirit of competition was forgotten.

The breach which competition digs between business men is not, after all, as deep or as broad as it sometimes appears to be. At any rate it is not so broad that it cannot be bridged by sympathy.

NEW SYSTEM IN CUSTOMS.

AN important change is being made by the customs authorities in the office departments in which imports are checked at the chief ports of entry. The change is being made on account of the allegation that in some instances the clerks whose duty it is to check over these imports have been in collusion with importers and have allowed entries to go through without being properly examined.

In order to overcome this, it has been decided to adopt the system in vogue in the United States; that is, some responsible official will be placed at each of the ports at which the new system is to go into operation. He will pass the documents to different clerks to examine. In the past instead of going to such an official the documents have been taken direct by the importers to any particular clerk they may choose in the department, whose duty it was to do the necessary checking. It was this which gave importers, who desired to partially evade the customs, the opportunity to do so. The new system is in operation in Montreal and arrangements are being made to put it into operation in Toronto also.

AID TO SAULT INDUSTRIES.

THE action of the Onatrio Government in coming to the financial aid of the Sault Ste. Marie iron industries is not altogether without parallel in the history of Ontario.

Forty years or more ago the Government of the day came to the aid of a certain wholesale dry goods house in Toronto, which was financially embarrassed. Trade matters at the time were in a precarious condition. The firm concerned was a large one and it was felt that, if it was allowed to go to the "wall," the result would be serious to the commercial interests of the province. Money was accordingly advanced by the Government for the purpose of tiding the firm over its period of difficulty. Fortunately the action had the desired effect, and not only was a benefit to the firm but helped to steady trade in general in that part of Canada. This was, of course, before confederation.

The case of the Sault Ste. Marie industries is in some respects similar. In fact, if forty years ago the Government of the day were warranted in aiding a particular business firm for the sake, not only of the firm itself, but of the province as a whole, in the present instance the reason is all the greater. It is very doubtful, indeed, if a new company under the present condition of the money market could have successfully floated sufficient capital to start up the industries owned by the Lake Superior Co., unless the Government quaranteed the interest on the bonds. Such a failure would be a calamity which would be felt to a more or less extent in nearly every part of Canada and would seriously impair one of the staple industries of the country. It is only in exceptional cases that the Government comes to the aid financially of a private interest. This is one of the instances when it seems such aid is warranted.

CANADA'S UNDERPAID JUDICIARY.

So many persons are indifferent to public questions, no matter how directly they may affect one's business or one's liberty, that it is proof of the importance and the timeliness of a subject when two references to it arouse such widespread discussion as has been caused by the two editorials dealing with the salaries of the Canadian Supreme Court judges in the last two issues of this paper. Business men have in various ways manifested their approval of the stand taken in Hardware and Metal that the salaries of the judges on the Supreme Court bench are altogether inadequate in comparison with the dignity and influence of the office, that some of the best, the most desirable, men could not accept an appointment even to the Supreme Court for the simple reason that they could not afford to at the present salaries attaching.

* * *

D. McNicoll, acting president of the Canadian Pacific Railway, when the matter was brought to his attention last week, expressed his convictions with great force. "I have long thought," said he, "that the meagre salaries paid to our Canadian Superior Court judges are a disgrace to the country. It is a well-known fact that the members of the bar in our great centres of population (these being the men who should be available for high judicial positions) are in receipt of incomes from three to four times as great as those paid our judges. How, therefore, can it be expected that the best material from the bar can be obtained for judicial positions?

"I do not wish to be understood as casting any reflection upon the ability of those who accept positions as judges. We all know it is impossible to secure men to take the management of banks and other large financial or industrial institutions at anything like the salaries paid even to the highest chief justice in the land. Does this not show that the present system is wrong? I think so."

The Globe, Toronto, endorses the views expressed by Hardware and Metal almost verbatim. In the issue of Thursday, April 28, it says: "It is a cause of satisfaction to note occasional expressions of opinion favorable to the more adequate remuneration of judges of the Superior Courts of both the Dominion and the provinces. As to the desirability of having on the bench men of ability, learning and experience there is no room for doubt. The duties they have to discharge cannot be performed by those who have not such qualifications. Sometimes it is heard, as an objection to proposed increases of salaries, that there are plenty of applicants willing to take judicial positions at the present rates of remuneration; but the first consideration should always be fitness, and whatever salaries are necessary to secure the right sort of men should be cheerfully paid. The policy of entrusting inferior men with high judicial functions would soon hopelessly imperil the reputation of the country for civilization.

"Two comparisons may be cited as helping to a clear understanding of the importance of this question. (The comparisons quoted are those given in Hardware and Metal of April 16.) It is not necessary in considering the salaries of the Supreme Court judges to take into view those of the provincial Superior Court judges, but to do so would only strengthen the case for the payment of reasonable remuneration where qualifications so high are exacted."

* * *

In its comment on the subject the Ottawa Citizen, April 19, misses a vital point in the discussion. It says: "Hardware and Metal has deflected its attention from trade subjects to the question of Canada's underpaid judiciary and quotes some interesting figures in support of the statement that the Supreme Court judges of the Dominion are the worst paid in the Empire." (The figures quoted are the same as were reproduced in the Globe.) The Citizen is wrong in saying that this paper has "deflected from trade subjects" in introducing this discussion. The matter is one of vital importance to readers of Hardware and Metal. The judgments of the Supreme Court affect the business man much more vitally than they do the lawyers, for the former has to foot the bills and it is he who will gain or lose by the decisions. When this thought is fully grasped by the business men in Parliament and by the business men in Canada generally there will be an end to the dilatory treatment of this matter.

* * *

The first article on the subject was placed before Sir Wilfrid Laurier and his colleagues in the Dominion Cabinet. While declining to express any opinion on a matter on which the council as a whole has not passed, general recognition of the gravity of the question is evidenced.

Sir Richard Cartwright, Minister of Trade and Commerce, says: "The matter is doubtless one which deserves the very serious consideration of the Government and also of Parliament."

Hon. Wm. Mulock, Postmaster-General, says: "The question is one of very considerable importance and has for many years engaged the consideration of the various Governments. Up to the present it has not been satisfactorily solved."

This last sentence is worthy of attention. It is to be hoped a "satisfactory solution" will be reached during the present session.

* * *

Senator W. C. Edwards, one of the business men in the Upper House, expresses himself in a manner which manifests the progressiveness which has characterized his business career. He says: "If this matter should be up in Parliament for discussion, I will not hesitate for a moment to express my opinion on it, but outside of Parliament I would not like to go further than to say that all salaries to which you refer were arranged at a time when Canada was far from being in the position in

which it is to-day. In due time, no doubt, a revision will take place, not only in the salaries of chief justices, but those of all the courts and Ministers of the Crown and perhaps others as well.''

* * *

Robert Munro, managing director of the Canada Paint Company, and a former president of the Canadian Manufacturers' Association, when asked by a representatives of Hardware and Metal for a statement of his opinion on the subject said: ''I am in full sympathy with all you have said respecting the salaries of the judges in the Supreme Court. My observation leads me to believe that our brightest lawyers, speaking as a rule, find it less laborious and much more profitable to practise at the bar and that elevation to the bench would be to them quite a sacrifice. I feel sure that the business community will heartily support the Government in raising the emoluments of our judges to such figures as would attract the best men in the profession.''

MACHINERY IN THE WEST.

T. A. HOLLINRAKE, vice-president of the A. R. Williams Machinery Co., returned on Monday from a trip through Manitoba, the Northwest Territories and British Columbia. Mr. Hollinrake, who is recognized as a keen, conservative observer, was optimistic as to the conditions prevailing in the West.

''All the appearances indicate a good season in Manitoba and the Northwest,'' said he. '' There are a lot of people going into that section, thus increasing the consuming as well as the producing force there. It is the general experience, too, that a hard Winter like the past one is followed by a good year for wheat growing. Winnipeg is booming. On every side one could see evidences of building activity, of expansion of all kinds.''

''How did you find the machinery market there?''

''Winnipeg is, like the West generally, a limited market for machinery. Yet there is steady progress in the right direction. Each year sees a larger requirement, boilers and engines being in chief demand, though sales of saw-mill machinery are increasing. For iron-working machinery there is not a big demand.''

''How is mining in British Columbia?''

''The action of the Dominion Government in placing a bounty on lead has undoubtedly tended to encourage development on a sounder, more permanent basis. There is now good reason for prospecting and development work in a large way, for there is an assurance that if the mines are opened the product will have its market.''

''How has this affected mining machinery?''

''To some extent, but not yet as much as it is likely to as the business becomes settled and reduction works are installed as they will be needed.''

''I suppose you brought back some good orders?''

Mr. Hollinrake smiled quietly, as he is not inclined to give information of this nature. ''Well, I will say,'' he said at length, ''that we generally count on getting our share.''

NOTES FROM FIRE SUFFERERS.

M. & L. SAMUEL, BENJAMIN & CO. are comfortably settled in their temporary offices, Temple Building, Toronto, and are rapidly getting their stock into shape again. They expect to have a full line in their warehouse in a short time, as all the incoming steamships to Montreal have large shipments for them. They can take care of all orders sent them.

* * *

H. S. Howland, Sons & Co. are turning one of the Toronto rinks into a veritable bee-hive of industry. They have ordered a fresh stock of all lines handled by them and expect to shortly be in a position to take care of their customers' wants as efficiently and promptly as ever. Many orders of goods ordered prior to the fire were on their way at the time. These and many orders of both American and Canadian lines since placed have been accepted into stock and are now ready for shipment. In this they have been greatly assisted by the promptness and courtesy of many manufacturers, for all of which they express appreciation. This firm had, prior to the fire, an exceptionally comprehensive library of catalogues. They now invite manufacturers who have not yet done so, to send them their catalogues as soon as possible. It is expected that in a short time all booked orders will be filled. As their travellers are still out on the road, it is manifest they are ready to take care of general orders. In the meantime they are in a particularly strong position in the nail trade. Their new nail factory, the Graham Nail Works, was far from the scene of the fire. Large stocks are held here and can be forwarded at short notice.

* * *

The cut shown herewith gives an excellent view of the thoroughness of the devastation wrought south of Front street. The view shows a clear sweep of ruins from the Custom House window to almost opposite the Queen's Hotel, about 300 yards. The debris which marks the premises of H. S. Howland, Sons & Co., the Dodge Mfg. Co., P. D. Dods & Co., the Fairbanks Co., W. B. Stewart, and T. H. Mortimer, the Gutta Percha and Rubber Co., the McClary Mfg. Co., and the International Stock Food Co. is shown below the crosses in the engraving. Back of the two crosses to the left were the works of the Henderson Roller Bearing Co. and the Dominion Fence Co., which were also completely destroyed. The view shows less than a quarter of the burned area.

A Portion of the Toronto Fire Ruins.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL.
232 McGill Street.
Montreal, April 29, 1904.

Hardware.

THE St. Lawrence is now open from Montreal to Sorel, the first boat from the latter town arriving here early in the week. Although the ice is still jammed at Cap Rouge the river boats are already accepting freight for Quebec and intermediate points in the expectation of the speedy opening of river navigation. The canals will be opened early next week. The effect is already seen in a marked improvement in wholesale trade. The opinion is now freely expressed that the big rush coming in May will compensate to some extent for the dull trade of the first four months of 1904. There is no disguising the fact, however, that trade this Winter and Spring does not compare at all favorably with the volume of business done in 1903. Collections have been slow and the retail trade have not been disposed to stock very heavily while money was so scarce. With milder weather there has come, however, the usual Spring rush and all the indications point to a greatly increased business. Wholesalers report some improvement in United States shipments, but still complain of their inability to get supplies promptly.

Prices throughout are steady this week and the market is healthy and featureless. There is a steadily increasing demand for building hardware and for screws. Unfortunately there is a very decided shortage in screws and it seems idle to hope for any improvement this season in face of an increasing demand. The shortage applies to practically all sizes. Bolts and nuts, some sizes of which were so hard to obtain last season, are in good supply this Spring, and there should be no trouble in filling orders. Building paper is selling well.

Lawn Mowers—Warmer weather has caused a much better demand this week and orders have come in from a wide area. Wholesale houses are shipping now and filling orders as promptly as possible. Prices are steady. We quote as follows: With 8-inch wheel, sizes 12, 14 and 16 inch, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18 $4.75; 20, $5.25 each.

Garden Hose—An active demand has been experienced this week, probably due to warmer weather. Prices are steady. Discounts continue: Trade, 75 per cent.; Western, 65 and 10 per cent.; White, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; cotton, 60 per cent.

Hose Reels—These are also selling well. As noted before, prices are from 15 to 25 per cent. higher than last year.

Ice Cream Freezers—An improvement in business is noted this week, orders for this line being general. We quote the following range of prices for the leading brands: One quart, $1.50 to $1.60 each; 2 quart, $1.70 to $1.80 each; 3 quart, $1.95 to $2.25 each; 4 quart, $2.35 to $2.60 each; 6 quart, $2.95 to $3.25 each; 8 quart, $3.70 to $4.10 each; 10 quart, $4.75 to $5.50 each; 12 quart, $5.75 to $6.50 each; 14 quart, $6.75 to $7.50 each.

Agricultural Wrenches—The discount is 25 per cent. The demand is brisk.

Harvest Tools—The discount continues 60 per cent.

Spring Hinges—There is an active trade. We quote: No. 5, $17.25 per gross; No. 10 $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Heavy Screw Hooks and Hinges—Prices are unchanged and business is brisk. Sizes 12 inches and upwards are selling at $3.25 per 100 lbs; the price of the 6, 8 and 10-inch sizes is $4.25.

Wire Hat and Coat Hooks—As noted last week, wire hat and coat hooks have been reduced about 10 per cent. The price of the 3-inch size is now 75 cents per gross.

Churns—There is an average business but the market is featureless. The discounts are 40 and 15 per cent. f.o.b. Montreal and 30 and 30 per cent. f.o.b. factory.

Sap Spouts—The season is almost over but a stray order is still coming in. The price is still $6 per 1,000. Cook's sugar bits are selling at 50 per cent. off list.

Poultry Netting—The demand is better this week. Discounts for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-gauge, the discounts are 55 and 5 per cent.

Galvanized Poultry Netting Staples—In steady request at former prices which were as follows: Sizes 5-8, 3-4, 1, 1 1-8, 10-lb boxes, $12.50 list; 25 and 50-lb boxes, $12.25 list; 100-lb boxes, $12 list. Less 57 1-2 per cent.

Bed Staples—The discount on the Montreal Rolling Mills Company's and the B. Greening Wire Company's lists is 57 1-2 per cent. The discounts on the Dominion Wire Company's list are 25 and 2 1-2 per cent.

Blind Staples—The discount is 40 per cent.

Boxwood Rules—Discounts range from 52 1-2 to 50 per cent. off list.

Shot Guns—American manufacturers are still competing for trade and prices are down to a no-profit basis.

Wire Nails—Prices are still steady although there were rumors of an "open market" in jobbing circles early in the week. It is believed that the agreed price will be maintained. American competition is not bothering our manufacturers and jobbers now and indications point to a firm market. Trade is showing a big improvement this week. We quote the following prices: $2.40 per keg carlots and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford and St. John.

Cut Nails—There is only an average trade. The price is still $2.30 per keg f.o.b. Montreal, Toronto, Hamilton, and St. John.

Fence Staples—Prices continue as follows: $3 per 100-lb keg for galvanized, and $2.80 for bright; 25 to 50-lb packages, 25c extra.

Pressed Spikes—The discount is 25 per cent.

Horseshoes—There is not much doing at present. We quote: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c per keg extra f.o.b. Montreal only.

Horsenails—Trade is of average volume. We quote: C brand, 40, 10 and 7 1-2 per cent. off list; other brands 55 to 57 1-2 per cent. off.

Screen Wire Cloth—The price is $1.50 per 100 square feet.

Galvanized Coil Spring Wire—Business is fairly active this week. One large order is reported from the Northwest. Our quotations are as follows: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Carlots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in carlots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—A quiet but steady market. We quote No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11 $2.20; No. 12, $2.25; No. 13,

$2.35; No. 14, $2.45. In less than carlots 12 1-2c extra per 100 lbs will be charged.

Barb Wire—Jobbers report a few "rush" orders this week from retailers who hesitated earlier in the season. We quote: $2.75 per 100 lbs f.o.b. Montreal, and $2.50 f.o.b. Cleveland. Carlots of 15 tons $2.40 f.o.b. Cleveland.

Smooth Steel Wire—There is a fair trade passing at unchanged prices: Bright and annealed, $2.50 per 100 lb f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extra Coppered wire, 60c; tinned wire. $2; tras per 100 lb are now as follows: oiling, 10c; spring wire, $1.25; best steel wire, 75c; bright soft-drawn, 15c; hay-baling wire, 20 to 25c.

Annealed Hay Wire—Annealed hay wire and annealed and oiled wire are now sold at list prices plus the usual extras.

Fine Steel Wire—There is a quiet trade doing at steady prices. The discount is 25 per cent. with net extras as follows: 1 and 2-lb hanks, 25c per 100-lbs; 1-2-lb hanks, 37 1-2c; 1-4-lb hanks, 50c.

Brass Wire—The market is quiet. The discount is 60 per cent.

Copper Wire—At least one large sale of over 50 tons has been made this week. The discount is 60 per cent.

Rivets and Burrs—There is a brisk demand. Discounts are: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—There is a very active demand, but supplies are reported ample. We quote discounts as follows: Carriage bolts common, ($1.00) list 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes 4c per lb off; nuts, hexagon, all sizes, 4 1-4c per lb off.

Washers, 45 per cent. off.

Screws—As noted above, there is a shortage in almost all sizes and in face of an increasing demand there is little hope of an improvement. We quote discounts as follows: Round head, bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Cordage—Prices are firm and trade is active. We quote as follows: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; Russian tarred spunyarn, 13 1-2c; jute rope, 3-8-in in diameter and upwards, 9c; cotto nrope, 21c; cotton twine, 24c for 3 and 4 ply. Cotton bedcord, 90c to $1.70, according to length. Sash cord 30 to 31 1-2c; cotton candle wick, 22 to 24c.

Building Paper—There is an active trade doing . We again quote: Tarred felt, $1.85 per 100 lb; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry sheathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c per roll.

Cement—Trade is now commencing to be quite active and the opening of lake and river natigation will see some large shipments. Prices are steady at former quotations, which were: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel, ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—Trade is very active and supplies are none too large. English sell at $16 to $22 per 1,000; Scotch $17 to $22.

PLUMBING GOODS.

Though river navigation is still being awaited the ice is clear between Montreal and Sorel, and a few good shipments have been made to the latter port. A few days at most will suffice to clear the river to Quebec. It is said that only seven times in the past 50 years has the season been so late at this. Orders are coming in fairly well even for shipping by rail, merchants having been forced to wait so long that stocks must be replenished immediately at all costs. There has been no quotable change in plumbing goods during the week. Soil pipe has strengthened somewhat since last report.

Lead Pipe—The demand continues active. The price is 8c for composition and 7c for ordinary. Discount 35 per cent.

Soil Pipe and Fittings—There is an active enquiry and soil pipe is quite firmly held this week. We quote as follows: Light soil pipe, 3 to 6-in, 50 and 10 per cent.; medium and extra heavy soil pipe, 2 to 6-in. 60 per cent.; extra heavy soil pipe, 8-in, 45 per cent. Light fittings, 2 to 6-in, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in, 60 and 5 per cent.; extra heavy fittings 8-in, 45 per cent.

Iron Pipe—There is nothing new of importance to notice in regard to this. Prices are unchanged, and we quote: Standard pipe, per 100 feet, in length under 19 feet—black, 1-8-in, $2.30; 1-4-in, $2.30; 3-8-in, $2.55; 1-2-in, $2.85; 3-4-in, $3.65; 1-in, $5.20; 1 1-4-in, $7.35; 1 1-2-in, $8.95; 2-in, $12.55. Galvanized—1-4-in. $3.20; 3-8-in, $3.45; 1-2-in, $3.90; 3-4-in, $5; 1-in. $7.20; 1 1-4in, $10.05; 1 1-2-in. $12.20; 2-in, $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.; and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in, $4.20; 3-4-in, $5.25; 1-in, $7.55; 1 1-4-in, $10.55; 1 1-2-in, $12.75; 2-in, $17.60. Galvanized—1-2-in, $5.25; 3-4-in, $6.65; 1-in, $9.55; 1 1-4-in, $13.25; 1 1-2-in, $16; 2-in, $21.90. The discount on all sizes of extra heavy pipe is 12-12 per cent.

Solder—Trade is as usual. We quote 18c for bar and 18 1-2c for wire solder.

METALS.

The demand for metals continues quite satisfactory, though orders for delivery by boat are accumulating rapidly, and it is apparent that when the waterway is at last clear there will be an almost unprecedented rush. Both wholesalers and retailers are naturally looking forward with some degree of impatience to the disappearance of the ice. There are no changes to quote this week whatever. It appears that the rumors circulated in regard to withdrawals of prices on Canada plates, black sheets, tinplates, etc., which we reported last week seem as yet to have been unfounded, though prices in general in these lines in the Old Country are reported firm.

Pig Iron—Orders for import are fairly good, and Canadian iron is also in demand. The first deliveries of Londonderry iron were made toward the end of last week, and further shipments were made this week, the points of delivery being in the Maritime Provinces and to Montreal. We quote: Summerlee, $20.25 to $20.75; Glengarnoch, $20.25 to $20.75; Gartsherrie, $20; Londonderry, $18.50 to $19; Carnbroe, $18.50; No. 1 Middlesboro, $16.50; No. 2, $15.50. Ferrona iron delivered in Montreal in car lots is quoted as follows: No. 1, $18; No. 2, $17.50; No. 3, $16.50; No. 4, $16.

Bar Iron—Trade is quiet and prices unchanged from $1.75 for merchants' bar; horseshoe iron, $2; forged iron, $1.95.

Black Sheets—There has been no change in this market. Prices are firm both locally and in England. We again quote: 28-gauge, $2.35; 26-gauge, $2.30; 22 to 24-gauge, $2.25; 19 to 20-gauge, $2.30, and 8 to 10-gauge, $2.40.

Steel—There have been no quotable changes. Trade is quiet, at the following prices: Sleighshoe, $1.90; tire, $1.95 to $2.10; spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—The market is steady and unchanged. Quotations are as follows: Black Diamond, 8 to 9c; Sanderson's, 8 to 9c, according to the grade; Jessop's, 13c; Jonas & Colver's, 10 to 20c; "Air Hardening," 65c per lb; Conqueror, 7 1-4c.

Sheet Zinc—The market is quiet and prices remain at $6.15 to $6.25 in cask lots, and $6.50 in smaller quantities.

Galvanized Iron—The demand for galvanized iron is active and heavy shipments will be made on the opening of

navigation. Our quotations are: 28-gauge, Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz, $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c extra.

Tinplates—There have been no arrivals yet, but the feeling is firm in sympathy with the primary market. Cokes are worth $3.75 and charcoals are quoted at $4.

Terne Plates—The market is quiet at $6.75.

Canada Plates—Reports as to withdrawal of quotations on the part of English firms appear to be unfounded, though there is undoubtedly a strong English market. Prices here rule firm as follows: 52s, $2.30; 60s, $2.30; 75s, $2.40; full polished, $3.60 and galvanized $4 to $4.10; galvanized 60s, $4.25 to $4.35.

Ingot Tin—Tin fluctuated somewhat during the week, but our quotation of 32 to 32 1-2 is still good.

Ingot Copper—Copper is still firm, with but slight daily variations; 13 3-4 to 14c per lb can still be quoted, though the former price would only be considered in the case of large quantities.

Pig Lead—The market weakened since our last report but has since almost recovered, and we can still quote $3.40 to $3.50. Lead still shows a good deal of strength, though the tone of the market is not as firm as it was a week ago.

Antimony—There is nothing new to report this week. Cookson's sells at 7 3-4 to 8c.

Coil Chain—There is a fair demand for chain. Prices are steady as follows: No. 6, 10c; No. 5, 9c; No. 4, 8 1-2c; No. 3, 7c; 1-4-in, $6.10; 5-16-in, $4.70; 3-8-in, $4; 7-16-in, $3.80; 1-2-in, $3.70; 9-16-in, $3.55; 5-8-in, $3.35; 3-4-in, $3.30; 7-8-in, $3.25; and 1-in, $3.20 with 10c allowance on carlots.

Zinc Spelter—Trade is steady. We quote 6c.

Scrap Metals—Metals have not changed in price, but rubbers have weakened greatly and are quoted about 1-2c lower. Iron is still firm. The demand for copper and brass is, if anything, better than last week, but prices are steady and unchanged. The market in general is quiet, a good deal of stock doubtless being held until the opening of navigation. We quote: Heavy copper and wire, 11 to 11 1-2c per lb; light copper, 10 1-2c; heavy red brass, 10 to 10 1-4c; heavy yellow brass, 8 1-2c; light brass, 5 1-2c; lead, 2 3-4c; zinc, 2 3-4 to 3c; iron, No. 1 wrought, $10 to $12; machinery scrap, $15 to $16; stove plate, $12; mixed country rags, 65 to 75c per 100 lbs; old rubbers, 5 1-2 to 6c per lb.

HIDES.

There has been no change in hides. We quote:

No. 1 beef hides	0 08 0 08½
No. 2 "	0 07 0 07½
No. 3 "	0 06 0 06½
Lambskins	0 75
No. 1 calfskins	0 11

ONTARIO MARKETS.

Office of HARDWARE AND METAL,
10 Front Street E.
Toronto, April 29, 1904

A BETTER feeling is evidenced this week despite the fact that there is general recognition that business up to the present this season has been short of the volume turned over last year. It is not expected that what has been lost by the late Spring will be regained but there is hope that the Summer will prove an active one and that its demands will exceed, in some measure at least, the needs of last year. Prices show no change throughout, though there is belief in some quarters that an advance in bolts and nuts will be made within a few weeks.

Oil Stove Wick—Prices are steady since the advance of about 10 per cent. last week.

Steel Track Door Hangers—Prices are steady since the reduction, with a fair trade doing. We quote as follows: Steel track, 1x3-16 inches, $3.75; 1 1-4x3-16 inches, $4.75. At least one house is, however, quoting as low as $3.50 for 1-inch hangers.

Chain—There is a good trade at steady prices. Prices are still as follows: 1-4-inch, $5.60; 5-16-inch, $4.45; 3-8-inch, $3.85; 7-16-inch, $3.70; 1-2-inch, $3.55; 9-16-inch, $3.45; 5-8-inch, $3.35; 3-4-inch, $3.25.

Step Ladders—There is a good demand for pine ladders on this market at 10c per foot for 3 to 6 feet, and 11c per foot for 7 to 10 feet ladders.

Lawn Mowers—Business in this line continues to improve. Prices keep as follows: Woodyatt, 10 1-2 inch wheel, $8.50; Star, 9 inch, $7; Daisy, 8 inch, $5.75; Philadelphia, 7 1-2 inch, $7; Ontario, 7 1-2 inch, $15.80; King Edward, 12 inch, $9.50 (14-inch cut in aboce). D. Maxwell & Sons, 10 1-2 inch, $7.50 to $10; 9 inch, $5.50 to $6.25; 8 inch, $4.90 to $5.50. Discount 50 per cent.

Screen Doors—The demand continues to expand. There is no change in prices which are as follows: Common, two or three panel, walnut, 4 inch, $6.50; yellow and green stained, $6.75; in natural colors oil finish, $8.75, with 20c less for 3-inch style.

Screen Wire Cloth—Prices are steady at $1.50.

Spring Hinges—An improved trade is reported with prices steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—Business continues brisk. Prices are steady. We quote: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c per 100 lbs extra charged.

Barb Wire—A fairly good business is doing. Our quotations are steady as follows: $2.75 per 100 lbs f.o.b. Toronto and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—An excellent demand continues. The market is steady Our quotations are as follows: No. 9, $2.70 per 100 lbs, freights equalized with factory points at Montreal, Hamilton, London, Welland or Walkerville and allowance to other points up to 25c; carlots, $2.65, freight allowance to 20c.

Wire Nails—Better demand reported. Prices are unchanged at $2.45 per keg f.o.b. Toronto, with carlots $2.40.

Cut Nails—There is a fair trade, with prices steady at $2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—A moderate trade is reported. Prices show no change. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c less.

Horsenails—Business continues fairly active. We still quote discounts as follows: "C" brand, 40, 10 and 7 1-2 per cent.; other brands 55 and 57 1-2 per cent.

Screws—A good movement in this line is recorded. Prices are steady. We quote: Flat head bright, 87 1-2 per cent. discount; round head bright, 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—A good trade keeps up in this line. Prices are firm. We again quote as follows: Iron rivets, 60 and 10 per cent. discounts; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—Prices are stiff and an advance is looked for by some. A good business is reported. We again quote: Carriage bolts, common ($1 list), 3-16 and 1-4-inch, 60 per cent.; 5-16 and 3-8-inch, 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—Business in binder twine shows some improvement. Prices are firm. Our quotations are as follows: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; double shingle-yarn, 11c; single shingleyarn, 10 1-2c; sashcord 'Hercules,' 32 to 35c; 'Star,' 36 to 38c; cotton rope, 3-16-inch and up, 20 1-2 to 22c; 5 32-inch, 25 to 27c; 1-8-inch, 25 to 28c; cotton twine, 3-ply 25

"LONDON" HIGH-GRADE COILED SPRING WIRE

Has a perfect coil or spiral' not a kink. It is made from a special wire containing a high percentage of carbon, which we get from the American Steel and Wire Co.'s Mills at Cleveland. This wire is not equalled by the product of any other concern either in tensile strength or in the galvanizing.

London Coiled Wire in No. 12 Gauge is at least 25 per cent. stronger than that sold by our competitors. A test will prove the correctness of our assertion.

We have hundreds of tons in all sizes and kinds in stock, and can ship you 500 lbs. or five cars within 24 hours after receiving order.

If you want prompt shipment send us your orders for Coiled, Plain, Barb or Staples; also Steel Gates in all sizes.

LONDON BALLED WEAVING WIRE (in small balls)

Works like a charm. Just suits the farmers.

The London Fence Machine Co.,

LONDON, ONTARIO. CLEVELAND, OHIO.

to 28c; 4-ply 32 to 34c; calking cotton, 16 1-2 to 17c; cotton waste, colored, 6 3-4c; white, 11 to 13c.

Building Paper—The market is brisk and firm. Our quotations are as follows: Tarred felt, $1.85 per 100 lbs; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry seathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c per roll.

Firebricks—Business is good but prices are unchanged. We quote English and Scotch at 28 to 35c.

Cement—Dealers are receiving a great many inquiries for cement just now and predict an advance in price in the near future. A large quantity of it will be used this season owing to the necessary replacing of the buildings destroyed by the great fire of last week. We quote: Canadian Portland, $1.90 to $2.25; American Portland, $2 to $2.10 f.o.b. Toronto.

PLUMBING GOODS.

Business has improved materially during the past week or so, particularly in brass goods, both for waterworks and steamfitters. Soil pipe is not as active as a week ago but in iron pipe, enamelled goods, etc., an active trade is doing.

Lead Pipe—Prices are steady. We quote: Lead, 7c; lead waste pipe, 8c; discount 35 per cent.

Soil Pipe and Fittings—No change in prices. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-inch pipe 40 and 5 per cent.

Iron Pipe Fittings—Business is larger than last week. We quote: Malleable fittings, 20 per cent.; cast iron (standard), 57 1-2 per cent.; headers, 52 1-2 per cent.; flanged unions, 60 per cent.; malleable bushings and plugs, 57 1-2 per cent.; nipples up to 6-inch inclusive, 67 1-2 per cent.

Copper Range Boilers—A fair trade has been done since the new prices were issued. Discounts at 15 per cent. continue.

Iron Pipe—Prices are firm at unchanged figures. We quote f.o.b. Toronto: Black pipe 1-8-inch, $3.25; 1-4-inch, $2.07; 3-8-inch, $2.25; 1-2-inch, $2.50; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.85; 2-inch, $11.05; 2 1-2-inch, $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25. Galvanized pipe, 1-4-inch, $2.88; 3-8-inch, $3.11; 1-2-inch, $3.42; 3-4-inch, $4.40; 1-inch, $6.35; 1 1-4-inch, $8.80; 1 1-2-inch, $10.75; 2-inch, $14.80.

Enameled Ware—There is a brisk movement at steady prices. We quote: "Standard" 5 1-2 feet rolled rim, first quality, at $21.60; second quality, $17.85. There is no change in closet quotations.

METALS.

The metal market shows every sign of increasing activity, and the outlook is quite satisfactory. Large quantities of galvanized sheets and copper sheets will, it is anticipated, be needed for rebuilding operations in Toronto. Stocks here are fairly large and as practically all the incoming ships have metal for this market there is little danger of a scarcity.

Pig Iron—There is a fairly large movement of iron in this market. Canadian, United States and British grades are all offering and competition is decidedly keen. Prices are nominally unchanged. We quote:

Middlesboro, f.o.b.,	Toronto		$19 50
Hamilton, No. 1	"	$18 50 to	19 00
" No. 2	"	18 00 to	18 50
Midland, No. 1	"	18 50 to	19 00
" No. 2	"	18 00 to	18 50
" No. 1 f.o.b.	Midland	17 00 to	17 50

Bar Iron—Prices are decidedly firm. Some of the large producers in the United States have withdrawn their quotations on this market. There is an active trade. Prices are as follows: $1.80 f.o.b. Toronto. For extras as cut to length while rolling, 2 feet and over, 10c per 100 lb; 1 foot and under 2 feet, 15c; under 1 foot, 20c; over 20 feet by special agreement according to length and size.

Steel—It is still stated that steel is being dumped on this market at lower prices than those now prevailing at Pittsburg. There is a good demand. Our quotations are as follows: Jessop's high speed, 60c; Jessop's "Standard" tool, 14c; "Chas. Leonard," 8 to 9c; Jessop's best crucible sheet steel, 14c; Crucible Steel Co.'s "Black Diamond," 10 to 11c; "Silver," 13c; "Special," 17c; "Rex" high speed, 65 to 75c; "Self Hardening," 45 to 50c; Morton's tool steel, 14c.

Black Sheets—In considerable demand both for import and from stock. Prices are unchanged.

Canada Plates—A fair demand from stock. The import trade shows some improvement. Prices are unchanged. though firm. We quote as below: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—There is an easier outside market. Quotations locally are firm but unchanged at 30 to 30 1-2c.

Galvanized Sheets—There is a good demand. Our quotations are as follows: Queen's Head, $4.25 for 28 gauge; Aemrican, $4 for 28 gauge; Bell brand, $4.25 for 28 guage; Gordon Crown, $4.25 for 28 gauge.

Tinplates—More active. The British market is quite stiff. We quote: Coke plates, bright, 14x20, $3.50; charcoal plates, $4.25.

Copper—A fair business in both ingot and sheet. Prices are steady. We quote; Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—There is no change. We quote $3.30 per 100 lbs for pig lead and $3.65 for bar lead.

Zinc Spelter—A fair demand at 6 to 6 1-2c per lb.

Zinc Sheets—Stocks light. We quote: Cask lots, $6.70 to $7, and part casks $7 to $7.25.

Solder—Good trade doing. Prices are unchanged. We quote: Guaranteed half-and-half at 18c, and wiping 17c.

Antimony—8c per lb.

Old Material—The iron market is practically at a standstill but other lines are active. Prices are firm. We quote: Heavy copper and wire, 10 1-4c per pound; light copper, 9 1-4c per pound; heavy red brass, 9 1-4c per lb; heavy yellow brass, 8 to 9c per lb; light brass 5 to 5 1-2c per lb; lead, $2.50 per cwt; scrap zinc, 3c per lb; iron, No. 1 wrought, $10; No. 2 wrought, $3; machinery cast scrap, $14; stoveplate, $10; malleable and steel, $4; old rubbers, 5 1-2 to 6c per lb; country mixed rags, 50c per 100 pounds.

PETROLEUM.

There is yet no change in the petroleum market. Business is quiet and prices firm as below: Canadian prime white, 19c; Canadian water white, 20 1-2c; American prime white, 19 1-2c; American water white, 31 1-2c; ex-warehouse.

Hides, Skins and Wool.

The market is active and prices firm. Veal skins have advanced 1c per lb. on all grades. No other changes are noted this week. We quote the following prices:

HIDES.

No. 1 green, per lb	0 07
" 2 " "	0 06
" 1 " steers, per lb	0 07½
2 " " "	0 06½
Cured, per lb	0 08

CALFSKINS.

Veal skins, No. 1, 6 to 14 lb. inclusive	0 10
" " " 2 " " " "	0 08
" " " 1 15 to 20 lb "	0 09
" " " 2 " "	0 07
Deacons (dairies), each	0 65
Sheep skins	1 00 1 15
Lamb skins	0 20

WOOL.

Unwashed wool, per lb	0 09 0 10
Fleece wool, new clip, per lb	0 15 0 16
Pulled wools, super, per lb	0 18 0 20
" " extra "	0 20 0 22

MACHINERY WANT ADS.

Hardware and Metal institutes this week another feature for the convenience of its readers. In the "Condensed Advertisements," page 26, will be found a column devoted to "Machinery Wanted." Any reader of this paper desiring any new or second-hand machinery, boilers, engines, shafting, pulleys, belting or any plant or equipment for a mill, factory, foundry or machine shop, can have a condensed notice to that effect inserted free in this column. A charge will be made by firms desiring to announce machinery or equipment for sale.

On the 9th of May next will take place at Three Rivers, Province of Quebec, the marriage of Mr. Ernest Bureau, representative and director of the Canada Hardware Co. of Montreal, to Miss Evelyn Hart of that city. Hardware and Metal offers congratulations in advance.

TRADE CONDITIONS IN MARITIME PROVINCES.

Halifax, April 25, 1904.

BUSINESS has started at a more lively pace this week, the better weather being quite a stimulus to trade. Halifax harbor at present is crowded with shipping. Many fishing schooners are in port en route for the fishing grounds. These require more or less supplies of one kind or another. A large number of coasting vessels are also here taking cargo for the smaller outports, which have been closed to navigation for the past five months.

* * *

The local markets are steady; in fact there has been no change in prices to record during the week under review. The trade looks for a reduction in the price of turpentine, but so far jobbers are using the March quotations.

* * *

The new continuous steel billet mill at Sydney was started up on the 22nd, and the plant is now working satisfactorily. Several experts were present when the first billet went through and was elongated to 60 feet. They pronounced it one of the best pieces of steel they had ever seen. Five different sizes are made by a change of the rolls.

* * *

The Portland Rolling Mills at St. John have received their new plant for the manufacture of belts, etc. The works ought to be in operation by the middle of May.

* * *

The foundry business of James Hillis & Son has been taken over by a limited liability company under the name of Hillis & Sons, with a capital of one hundred thousand dollars. The business includes the foundry at Richmond, the salesroom and warehouse in Halifax, and the branch at Sydney. The business has been uniformly successful.

BUSINESS CONDITIONS IN BRITISH COLUMBIA.

Vancouver, B. C., April 22, 1904.

ACTIVE steps are being taken by the Great Northern Railway Co., or as it is known in this province, the Vancouver, Westminster & Yukon Railway, to secure location and establish central terminal facilities. A large portion of the central part of the city, just off Hastings street, at the junction with Carrall street, has been bought up for station grounds. This is known at present as Chinatown, and the Orientals who have been dispossed by the sales of land will have to find some other location for their quarter, with its odd business houses and queer stocks of goods.

The V., W. & Y. will have a splendid location, close to the centre of the city, near the inter-urban tram line and but three blocks from the Burrard Inlet waterfront, where it is said the railway now owns the Hastings mill site, one of the best pieces of frontage on the harbor, and at present occupied by the biggest saw mill plant in the city. Work will begin at once for clearing the Chinatown site of all buildings, as the railway aims to be ready to run its trains direct into the city by the time the bridge across the Fraser River at New Westminster is complete, which will be some time in June or July. Before the V., W. & Y. can reach its proposed terminal, it will have to build a bridge across False Creek, but this is to be nearly all piling and trestle work, with an 80 ft. draw in the centre. The plans for it were approved by the Railway Committee of the Privy Council last year. The V., W. & Y. line between Vancouver and New Westminster is complete and trains are now running into Vancouver from the Royal City. At present the terminus is at Westminster avenue, south of False Creek.

The Great Northern, which owns this line, is also moving to build that section of the V., V. & E. Railway up the Fraser River Valley this season. If it is carried right through to the Boundary country, it will cross the Hope Mountains and tap the rich Similkameen Valley, which is virtually the only section of Southern B. C. still without railway connection.

* * *

There are some very large cargoes of general hardware and metals now en route from the old country by the steamers of the China Mutual and Blue Funnel lines. One of these, the Hyson, will be in port next month, with 1,800 tons of general merchandise from Liverpool and other shipping centres in England for Vancouver wholesalers. Much of this is metal manufactures, steel plates, tinplates, bar iron, pig iron and lead, wire cables, corrugated steel, ship chandlery and other similar lines, as well as firebrick, fireclay and cement.

Another steamer of the same line, the Ning Chow, which arrives next week, has nearly 1,000 tons of similar cargo for local delivery. These are the largest consignments yet delivered or to be delivered to Vancouver importers, since the institution of direct service some 16 months ago. It is also evident from the trend of shipments that these steamers will in time do a large proportion of the lumber carrying to the ports which they touch on the return voyage to England. The carrying of salmon has practically been conceded to them, as their rate is 32s 6d per ton, while this year sailing ships are asking 30s per ton for salmon charters.

* * *

The sale of the Britannia mine in Howe Sound, a few miles from Vancouver, has indications this time that there will be active steps taken for its development. There has been a sum of $250,000 in cash arranged for by the new transfer, which will be expended in active work. There is a contract now let for the building of a large wharf at the waterfront just below the big mine, and it is the intention to go ahead and put up a concentrator this Summer. Ore will be raised as soon as all the other preliminaries are arranged. New York, Salt Lake and Spokane capital is interested in the new deal, and as Jas. Bellinger of the Crofton smelter is the Spokane representative, it is likely the Britannia ore will be treated at the Crofton smelter. It is expected that 400 men will be given employment before a year is over.

Some large contracts for supplying material for civic improvement have been let this year by Vancouver City Council. Recently a tender for the supply of vitrified sewer pipe for several miles of new sewers, which are to be constructed this year, was let, the successful tenderers, Messrs. Evans, Coleman & Evans, getting the contract at $19,101.36. The vitrified pipe used here is imported from England direct.

* * *

For making wood-stave water pipe, there are two new plants now completed, one of which, that of the Canada Pipe Co., is turning out stock. The pipe is tested to 190 lbs. pressure and is said to last indefinitely. It is made from selected fir, cut with a tongue and groove on the joints, and, after being put together, it is wrapped in a special machine with steel wire, varying in size with the size of the pipe. Tension is put on the wire, in wrapping it, so that a very strong pipe is the result. All sizes from two inches to 54 inches are made, and any size wanted can be made by laying the pipe in the trench with strap iron bands which are drawn up with a bolt instead of the spirally wrapped wire. There is a big market for this pipe in the Northwest, where many of the towns are being supplied with waterworks this year.

* * *

Importations of hardwood from Australia are beginning to increase. Recently the City Council of Vancouver gave an order for 10,000 feet of tallow wood planking for the deck of one of the bridges. This is to cost, laid down in Vancouver, $49.30 per M. It is claimed for it that its durability is much greater than that of ordinary fir even when it is treated with tar or other preservatives. The wearing qualities of the tallow wood are also infinitely greater. Other lines of Australian hard woods are also being largely imported, and the next steamer to arrive will have some heavy consignments, which have been ordered by the C. P. R., the B. C. Electric Railway, and other large concerns.

* * *

Because they have no relief from conditions which they consider oppressive in freight rates, the citizens of Nelson engaged in mercantile business have taken the matter up with the Railway Commission. Five weeks ago, when Mr. F. W. Peters, assistant western freight manager of the C. P. R., was in Nelson, the difficulties complained of were brought to his attention, but no reply has been received. The wholesalers of the city at a largely attended meeting adopted the following resolution:

"That the secretary wire the secretary of the Railway Commissioners asking on what date they will meet in Winnipeg, and if they will receive a delegation from the Nelson wholesalers and the Nelson Board of Trade, to present their grievances re freight rate discrimination."

* * *

Local business with the hardwaremen has been much hampered lately because of the delay in transportation. Expected consignments of freight did not arrive and orders were held here because the line was not clear. Fortunately the

snowslides have ceased for the time and the road has been able to resume ordinary traffic, so that goods are coming in and orders being sent out again.

Up-coast business is active on account of cannery operations beginning in that section of the province earlier than on the Fraser River. At Victoria there is a good deal of activity on account of the anticipated permission to use fish traps. Some holders of trap sites have already begun to build, to be in readiness for the present season.

Building operations in the city and in Victoria are very active now, fine weather being favorable for extensive operations. Building materials are rapidly moving out from stocks and it is with difficulty that some lines are kept up.

Prices of staples show but little change since last quotations. Steel rails are slightly lower, partly through local competition. Bar iron is also somewhat lower but not quotably so.

PITTSBURG METAL MARKET.

From The Iron Trade Review, April 28, 1904.

THE tone of the iron market is less confident and in some lines there are signs of hesitancy and weakness. How much of this is due to the published reports that Lake Superior ores will be reduced $1 a ton from the basis of 1903 cannot be judged; but that has been without doubt an influential factor, following the recent decision of the Steel Corporation concerning options on pig iron, the importance of which seems to have been exaggerated in some quarters.

The ore men's meeting at New York made some progress, but the outcome was not that widely telegraphed. The representatives of merchant ore firms presented a resolution to the effect that if the steel companies could not enter an association purely as miners of ore and subject to restrictions as to output, it would not be possible to maintain an agreement on any higher basis than $3.50 for old range and $3.25 for Mesabi Bessemer, and $2.85 for old range and $2.65 for Mesabi non-Bessemer. While these figures were considered too low by the Steel Corporation, its representatives are understood to have given assurance that in case an association was formed on this basis, the corporation would not sell ore in the market either directly or through conversion deals.

Pig Iron—The demand for foundry iron in this district is not heavy, purchases being limited almost entirely to carload lots for prompt shipment, indicating that the foundries need the iron, but will not buy, expecting lower prices to follow a material reduction in ore. A settlement of the ore prices for this year will no doubt stimulate the local market and much interest is being manifested in the action that will be taken at the meeting in Cleveland next Tuesday. Recognized brands of No. 2 foundry command from $13.85 to $14 Pittsburg, but sales from furnaces not regularly operating on foundry iron have been made as low as $13.60. Bessemer iron for May, June and July delivery is now quoted at $13 at the furnace, but there is practically no demand. Basic is held at the same price. The large contract for forge iron closed by the leading cast iron pipe interests will take a large tonnage out of the market and will strengthen the forge market for several months. For early delivery forge is held at $13.25, Pittsburg. We revise quotations as follows:

Bessemer, Valley	$13 00 to 13 25
Bessemer, Pittsburg	13 85 to 14 10
No. 1 Foundry	14 25 to 14 50
No. 2 Foundry	13 85 to 14 00
Gray forge, Pitt burg	13 25
Chilled basic, Valley	13 00 to 13 25
Chilled basic, Pittsburg	13 85 to 14 10

Steel—While the leading steel interests are adhering to the agreed quotations, some independent manufacturers are again making lower prices on billets, the agreed quotations being shaded from 50 to 75 cents a ton in Ohio and Indiana. Nothing better than the agreed prices is done in this district, however. We quote these prices as follows: Bessemer and open-hearth billets, 4x4 inches, and slabs, up to and including 0.25 carbon, $23 Pittsburg, Wheeling, Valley, Johnstown, Ashland, Ky., Ironton, O., and Lorain, O.; 0.26 and including 0.60 carbon, $1 advance; and 0.61 to 1.00 carbon, $2 advance. Billets smaller than 3 7-8 inches and sheet and tin bars are $1 per ton extra. Bessemer and open-hearth rods are still quoted at $30 to $31 Pittsburg.

Bars—Specifications on old contracts for iron and steel bars are heavy and the mills are operating at their limit. New business is light, however, and the iron bar market in this district is extremely quiet. Quotations are unchanged: Bar iron, 1.40c to 1.45c Pittsburg, for local delivery, while for Western shipment quotations are based on 1.35c Pittsburg. Hoops are held at 1.40c base, and bands at 1.35c taking bar extras.

Structural Material — Demand for structural material is improving, and while no very large orders are placed, there is a steady run of small business and all of the mills continue to operate in full. We make the following quotations: Beams and channels, 3 to 15 inches, 1.60c; 18 to 24 inches, 1.70c; tees, 1.65c; zees, 1.60c; angles, from 3 to 16 inches, 1.60c; universal mill plates, 1.60c.

Sheets—There is considerable cutting on black sheets, especially on desirable orders, and as low as 2.20c is being done on 28 gauge in carload lots. There is more buying, however, than for some time, but the competition is extremely keen.

Wire and Wire Nails—Most of the mills are from two to three months behind on deliveries of wire nails and wire products. The volume of new business is not heavy, however, but as most of the mills are booked up to July, the market continues very firm, as follows: Wire nails, carload lots to jobbers, f.o.b. cars Pittsburg, are quoted $1.90 base; plain wire, carload lots, $1.80 base; barb wire, carload lots, $2.20 base; staples, carload lots, $2.05 keg. Galvanized, 30 cents extra. Carload lots to retailers are held at 5 cents advance in all lines, and on less than carload lots a further advance of 10 cents is charged. Steel and iron cut nails, carload lots, $1.75, and less than carload lots, $1.80, f.o.b. Pittsburg, plus freight to points of destination. Terms, 60 days, less 2 per cent. off in 10 days.

Merchant Steel—Demand continues quite heavy and nearly all the mills are operating full. The implement manufacturers are figuring as heavy buyers closing for their requirements until the end of the year. We make the following quotations: Toe calk, 1.90c; carriage spring steel, 1.75c; tire steel, 1.65c; plow steel, 6 inches and under, 1.40c for Bessemer and 1.45c for open-hearth; plow slabs, 1-4 inch and heavier, 1.65c. The demand for shafting on the part of the machinery manufacturers is not heavy, and tonnage has therefore been considerably affected. Drawn, ground and cold rolled shafting is held at 52 per cent. off in carload lots and 47 off in less than carloads.

Pipes and Tubes—The demand for line pipe for carrying oil from the fields in Indian Territory, Kansas and Texas will be unusually large this year, while the requirements of the natural gas operators also promise to be heavier than anticipated.

Coke—Owing to the excellent shipments now being made from the Connellsville region, somewhat lower prices are reported on coke. Sales of foundry coke have been made at $1.95 to $2 for strictly Connellsville, although the ruling quotations that are being made by the majority of the producers range from $2 to $2.25. On furnace coke $1.55 to $1.60 is being quoted, although sales of furnace coke in transit have been made as low as $1.50. Idle capacity in both the upper and lower regions is gradually being placed in operation, and at present out of a total of 23,041 ovens in the upper region, 18,381 are in operation, while in the lower region out of a total of 5,645 ovens only 985 are idle. The total production amounted to a little over 262,000 tons during the week ending April 16, the upper region having produced 207,093 tons and the lower 55,258.

LONDON METAL QUOTATIONS.

From the Metal Market Report.
New York, April 28, 1904

Tin—Spot tin opened steady at £127 7s 6d, futures £126 7s 6d, and after sales of 110 tons of spot and 230 tons of futures closed firm at £127 12s 6d for spot and £126 15s for futures, making price as compared with yesterday 7s 6d higher on spot and 7s 6d higher on futures. Singapore quotation for tin to-day was equal to £127 London, unchanged from yesterday's closing.

Copper—Spot copper opened firm at £58 12s 6d, futures £58 10s, and after sales of 200 tons of spot and 300 tons of futures, closed easy at £58 7s 6d for spot and £58 5s for futures, making price as compared with yesterday unchanged on spot and 1s 3d higher on futures.

Lead—The market closed at £12 2s 6d, making price as compared with yesterday 2s 6d lower.

BUSINESS IN CAPE BRETON.

IN the Port Hood, C.B., Siftings of recent date the business outlook in that section of Canada was sized up thus:

After a comparatively severe Winter, an early Spring would be a welcome visitor. As this is a matter which rests with Providence people must submit and take these dispensations as they come.

No one that we are aware of suffered for the necessities of life; we are cognizant of the fact, however, that the steady Winter weather has caused a scarcity of cattle feed in many sections of the country. Owing to the heavy snowstorms lumbermen were prevented from prosecuting their industry as vigorously as during the preceding three years. Railway transportation facilities were also hampered, causing a general stagnation in the coal trade so far as the County of Inverness is concerned. A dulness in trade of every description has been the inevitable consequence.

Almost every person one meets asks "What kind of Summer are we going to have?" Without taking a gloomy aspect of the future, we are inclined to put a conservative estimate on the success of the different undertakings for the remainder of the year. There will of course be considerable activity at the mining centres; but there is nothing in sight to warrant the belief that there will be a boom. If the prosperity which has been enjoyed for some years can be maintained at its normal condition. people will have reason to be thankful. The indications, however, point rather to a shrinkage than an overplus. Whether due to the war in the East or "a corner in wheat" breadstuff has advanced about 25 per cent. which will increase the cost of living without any corresponding increase in wages or better prices for commodities which farmers may wish to dispose of for cash or in exchange for manufactured goods.

As "after a storm there is always a calm," so it is that after a boom there is always a reaction. While there is nothing discouraging in sight we think it is better to realize that there is more or less stringency in every industry, and the only way of successfully combatink these conditions is by exercising the strictest economy. "Earn more and spend less" should be the motto.

HARDWARE CONDITIONS IN MANITOBA.

Office of HARDWARE AND METAL
Room 308 McIntyre Block.
Winnipeg, April 27, 1904.

FOR the past week business has beeh a little quiet and trade throughout Manitoba and the Northwest has been dull owing to the fact that the farmers are practically stalled up on account of the large stretches of water that cover the prairies for miles. The market remains unchanged. We quote:

WILL BUILD TURBINES IN CANADA

S. B. Polson and J. B. Miller, of the Polson Iron Works, of Toronto, during their trip have visited many shipbuilding yards, English and continental, and were shown every attention. Mr. Polson, speaking to the Canadian Press representative, expressed himself as greatly satisfied with the results of the trip. They had closely studied everything new in the way of shipbuilding, and hoped that the turbine steamer launched recently on the Tyne would be the last built in that country for Canada. In future Canada will build her own turbines, says Mr. Polson.

Ross & Matthews, hardware and stove dealers, Dundas, Ont., have just installed a complete tinsmithing outfit and have secured a practical tinsmith to look after that part of the firm's business.

INCREASING THEIR STOCK.

Baines & Peckover, Toronto, are gradually extending their stock. They now carry, in addition to their regular lines, bolts up to 30 inches long and 7-8-inch thick; bolts with hex. nuts, 7-8-inch thick; coach screws, to 12x3-4-inch; wood screws in great range.

PAINT, OIL AND BRUSH TRADES

Ochre in France.

THE production and preparation of ochre is an industry which has been existing in France for almost two centuries, says the Oil and Colourman's Journal. The product possesses a good reputation, since it is rich in ferric oxide, and its production is conducted with the utmost care. Ochre is chiefly found in five "departments," viz.: Ardennes, Isere, Lot et Garonne, Vaucluse, and Yonne. The three first-named districts produce only comparatively slight quantities, the important mines and factories being in Vaucluse and Yonne. In the latter department the ochre veins are not very thick—70 centimetre to 1 metre—but contain considerable quantities of ferric oxide, and give comparatively large yield of ochre. Some is obtained there almost exclusively in underground galleries diverging from a centre shaft, which sometimes goes down to a depth of 33 metres. The ochre is brought up there from open pits, as well as from underground mines and galleries, the process being still a rather primitive one. The clay is brought down a long distance in carts to the valley, where the washing is conducted. The material consists of fine sand and ochre, and is free from gravel and stones. It is only dug for in Winter, since only then water is present in sufficient quantity. In Summer the waterways dry up. The separation of the ochre from sand is accomplished in a very simple manner. The crude ochre is flooded with water, and the cleaned product is caught in tubs, in which it settles. Three different grades are obtained in this manner. When the clay comes from the mine it is spread on the ground for a space of about half-hecter, and ditches are dug between, which lead to a series of basins, each one lower than the next. A mild stream of water is conducted into the ditches, so that it runs over the layers of clay. This softens the ochre and washes it gradually down. On the way to the first basin, the sand, being heavier, remains in the ditches, so that the water, when it enters the first basin contains only ochre. The largest and heaviest ochre particles remain in the first basin, the second basin will receive a somewhat finer grade, and so on. In this manner the clay is washed, and the process is manipulated during the whole Winter, so that, when the Spring comes, the basins are filled with fine ochre in the shape of heavy mud. In the dry season, the water is stopped off and the basin freed from it entirely. As soon as the ochre is dry enough to be shaped, bricks of equal size are formed of it and exposed to the sun, so as to dry them entirely. A portion of the ochre is then shipped, but a much larger part is crushed into powder—not ground. The greatest difficulty is for the manufacturer to obtain a uniform shade, since ochre shows all sorts of hues from dark red to the well-known gold color. A good result is really only furnished by the mines which yield yellow ochre; when the reddish cast appears the product loses in value. In the vicinity of Apt, in the department of Vaucluse, there are ochre beds of entirely red color, but same cannot be compared to the so-called Venetian red, the color being less strong and brilliant. There are many mines around Apt, which have been worked for many years already, but are not exhausted by any means. One of them is notable in that it has furnished a uniform quality for the whole time it has been worked, while that of the others varies from year to year. Many mines are abandoned when the earth is no longer yellow, and changes into red, but it occurs only seldom that the working is discontinued because they are exhausted.

White Lead Prices.

"It is absolutely ridiculous that white lead prices should be at their present level in Canada," said a Toronto jobber this week. "Do you know that prices are more than 2c. higher in Detroit than they are in Windsor? Why? Just because the United States manufacturers have sense enough to maintain their prices at a basis suitable to them all.

What Should a Good Paint Be?

One season handling Hollywood brand will convince you that it is what it should be—

GOOD PAINT TO COVER
GOOD PAINT TO WEAR
GOOD PAINT TO SELL

What more do you want? Hollywood Paste, Ready-Mixed and Floor Paints wear on the job, not off it.

"ARK BRAND" WEATHER & WATER PROOF PREPARED PAINT

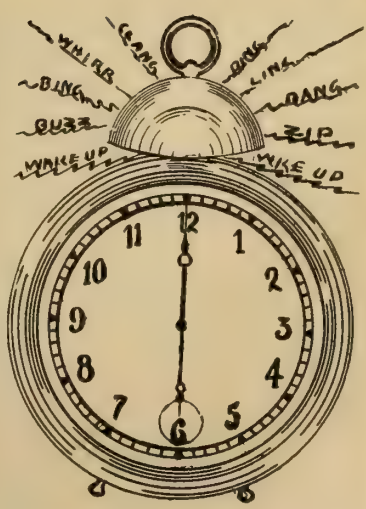
The hour has come

when men and women buy paint for the Spring renewing.

Many have already learned to demand "ARK" Brand—the paint that never fails them. Many dealers who have experimented with this and that brand, have concluded that "ARK" Brand above all others serves them best. Here is proof:

Messrs. The Francis-Frost Co., Limited, Toronto. Knowlton, Que., Feb. 4th

Gentlemen,—We have been handling "ARK" Brand Paint for the past seven or eight years and as long as it is kept up to its present standard and as long as we continue dealing in that line we will handle "ARK" Brand if we can get it. We have had more satisfaction in selling it than any other paint we have handled, and we have handled a number of different brands. Yours truly, GEO. ROBB & SON.



We help our agents sell our paints. Write us concerning the agency for your section.

Paint and Oil Markets

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, April 29, 1904.

THE linseed oil market is weak, but until the opening of navigation no low priced supplies can arrive. In the meantime the local market is somewhat unsettled and while some houses have held to quotations of last week others have made concessions of 1 cent per gallon. The range of prices will be found below. New supplies will soon be arriving freely and naturally prices are a little more elastic. Although concessions have also been made in turpentine, supplies are none too abundant and the dealers are waiting for the new crop in the sunny south in hopes that prices will recede still more. In general business the week has seen a marked improvement. Although the river is still blocked at Cap Rouge boats are already accepting freight for Quebec and there is more life in Montreal manufacturing centres than at any previous time this season. Milder weather is having a very stimulating effect on the demand. The city trade is still demoralized by the strike of the house painters, but all indications seem to point to a speedy settlement. We quote:

Ground White Lead—Best brands, Government standard, $4.50; No. 1 $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead—$4.25 in casks, and in kegs $4.50.

Dry White Zinc—Pure dry, in casks, 6 1-4c; in 100-lb kegs, 6 3-4c; No. 1, zinc, in casks, 5 1-4c; in 100-lb kegs, 5 3-4c.

White Zinc—(ground in oil)—Pure, 25-lb irons, 8c; No. 1, 7c; No. 2, 6c.

Putty—Bulk, in barrels, $1.50; in 25-lb tins and irons, $1.80; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7c; 100-lb kegs, 7 1-4c; smaller quantities, 8 1-4c.

Red Leads—Genuine red lead, in casks, $4.25; in 100-lb kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks, $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge—Ground, casks, 5c; in less quantities, 5 1-2c; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Turpentine—Single barrels, 84 1-2c to 85c per gallon; 2 to 4 barrels, 83 1-2 to 84c per gallon. Standard gallon of 8.6 pounds. The difference in quotations is due to different terms of payment.

Linseed Oil—Raw, 1 to 4 barrels, 45 to 46c; 5 to 9 barrels, 44 to 45c; boiled, 1 to 4 barrels, 48 to 49c; 5 to 9 barrels, 47 to 48c. Delivered in Ontario between Montreal and Oshawa at 2c per gallon advance.

Shellac Varnish—Pure white, $2.85 to $3.50; pure orange, $2.75 to $3.40; No. 1 orange shellac, $2.45 to $2.60.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil—8 3-4 to 9 1-4c in wholesale lots, and 1-2c additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c; 25-lb drums, 15 1-4c; 1-lb packages, 16c; 1-2-lb packages, 18c; 1-lb tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c per lb; 25 lb drums, 15 1-2c; 1-lb paper boxes, 16c; 1-lb tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

Ontario.

Office of HARDWARE AND METAL,
10 Front Street E.
Toronto, April 29, 1904

TURPENTINE and linseed oil continue to receive the chief attention of the trade. Turpentine is quoted 4c lower by the majority of the trade. Linseed is 1c lower. There is a disposition on the part of some dealers to quote putty 25c lower than last week. Whiting is unchanged but lower prices are expected as soon as St. Lawrence navigation is open. Other materials are unchanged.

White Lead—Ex-Toronto, pure white lead, $4.65; No. 1, $4.20; No. 2, $3.90; No. 3, $3.50; No. 4, $3.25 in packages of 25 lb and upwards; 1-2c per lb extra will be charged for 12 1-2-lb packages; genuine dry white lead, in casks, $4.50.

Red Lead—Genuine in casks of 560 lb, $4.25; ditto, in kegs of 100 lb, $4.50; No. 1, in casks of 560 lb, $3.75 to $4; ditto, in kegs of 100 lb, $4.25.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c per gallon.

Paris White—90c to $1 per 100 lb.

Whiting—60 to 65c per 100 lb; Gilders' whiting, 75c.

Shellac—Pure orange, in barrels, $2.50 to $3; white, $2.50 per gallon; No. 1, $2.37 1-2, including price of can.

Linseed Oil—Raw, 1 to 2 bbls, 48c; boiled, 51c; 3 to 5 bbls, raw, 47c; boil-

St. John.

Burning oil is a quiet line at this season but the dealers are busy attending to shipments of lubricating and paint oils. There is very keen competition in lubricating oils. Prices are firmly held. In linseeds the low prices are still quoted. Turpentine is high.

Window Glass.

MONTREAL.

To the remarks made last week there is nothing to add as the situation remains unchanged. Import prices from Belgium have been advanced owing to the fear of a serious strike. Locally the market is very firm but no advances have yet been made and if May Day passes without any outbreak of labor troubles in Belgium prices here will probably be unchanged for the present. Everything depends upon the course of the Belgian market. We quote: First break, 50 feet, $1.70; second break, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

Business is of considerably smaller volume than usual at this season. Prices are unchanged but not strong. We quote window glass as follows: Star, first break at $3.30 per 100 fet and Double Diamond first break, at $5.10. Discount 15 and 20 per cent.

Turpentine From Mill Waste.

A company has been incorporated at Lake Charles, La., with a paid in capital of $50,000. The object is to extract turpentine and other essential oils and valuable products from the mill waste. To utilize this waste, the slabs, sawdust and other refuse from the big mills,

THE CANADA PAINT COMPANY LT'D

MONTREAL

TORONTO

hundreds of tons of which are now burned nightly in that district, has been the dream of practical lumbermen for years. The projectors of the enterprise believe that this hope is about to be realized, and they are willing to back their judgment with the money. The plant will be constructed and operated under the supervision of the company's chemist, whose services were secured several months ago, and he has spent the intervening time in experimenting with the waste and devising a practical method of handling it. Situated in the heart of the milling district, the company can procure the raw material at the smallest possible expense for transportation.

Petroleum in the Northwest.

H. H. Jones, manager of the Rosella Hydraulic Mining Co., of Victoria, B. C., has received advices from the company's representative in the far northeastern section of the province, next the Yukon boundary, that the Indians have disclosed the existence, in the mountains, of a lake of petroleum.

The Indians say that out from the edge of the bank there are places where the stuff wells up continually; it has done so day and night for as long as the oldest man can remember. It is supposed that those are free natural springs of oil, and that the whole lake is one huge sheet of crude petroleum. The depth in many places is considerable. Rocks from around the margin of the lake impregnated with the oil will burn readily.

The news has caused a good deal of excitement at Victoria, and it has not been allayed by the further information that men are staking out the lands as fast as they can measure them off. One man in Victoria has a partner who has already laid off 15 claims in the choicest locations around the copper and oil region.

TRANSPORTATION NOTES

It is understood that Hon. H. R. Emmerson, Minister of Railways and Canals, is in the Maritime Provinces to acquire the Canada Eastern Railway, which would be absorbed with the Intercolonial. It is further believed that other railways in the Maritime Provinces will thus be absorbed by the Government line.

* * *

The Richelieu & Ontario Navigatioo Co. have started their season. The Corsican left on Thursday evening at 7.30 p. m., and will be followed by the steamer Spartan Monday, May 2. These two steamers will form the service for May, leaving Toronto Mondays and Thursdays at 7:30 p. m. On and after June 2 the steamer Hamilton will go in commission, thus giving three steamers out of Toronto via the Bay of Quinte, leaving Tuesdays, Thursdays and Saturdays. Beginning June 1 the steamer Kingston will leave Toronto Mondays, Wednesdays and Saturdays, until June 15, after which date the steamer Toronto will go in commission, thus giving a daily service via Charlotte. There is a change in the time of the steamers leaving Toronto. This season they will leave at 3 p. m. instead of 4 p. m., as in the past three seasons.

The C. P. R. is now accepting freight via Owen Sound, though it is not expected navigation will be open before next week. Hereafter during the Summer season all C. P. R. freight for Fort William and western points will be sent by the water route unless otherwise directed.

* * *

The first sailing from Montreal was to have taken place on Monday this week, but ice has so prevented navigation that it is not likely any ocean vessels will come or go before next week. The Thompson line steamers Ionia and Fremona, the Donaldson line Savacia, the Canadian Pacific Atlantic Steamship Company's steamer Lake Champlain, and the Dominion line steamship Dominion, are all due by the end of the week, but it is now regarded as almost certain that all the steamers will be forced to remain in Quebec for a couple of days. If necessary the steamers will unload at Quebec, and then if the ice has moved out come up to Montreal for their outward cargo.

* * *

The G. T. R. have their new freight sheds at Toronto about ready for occupation. A parallel shed is to be added to the one now being completed.

* * *

The experiment of hauling heavy freight by electricity is being made in the northern anthracite coal region of Pennsylvania. The railroad as described by Mr. Francis in the Railroad Gazette, extends from Wilkes-Barre to Scranton, twenty miles. It is a standard gauge, double-track, rock ballasted road, laid with 90 pound rails. Everything is constructed up to the standard of a first-class steam railroad.

* * *

J. H. G. Hagarty, of the St. Lawrence & Chicago Navigation Co., predicts a dull season in lake freight this year, owing to smaller demand for iron ore and grain transportation. He did not expect Canadian freighters would move much before May 15, as ice is still prevalent at Fort William.

* * *

The Great Lakes & Northwest Transportation Co. have applied for power to construct canals and to improve the navigation between Lake Superior and the Red River at Winnipeg, and thence by Lake Winnipeg or other channels of the Saskatchewan River, and on to the Northwest, to improve the navigation of the Saskatchewan and its branches, to provide a transportation route from the head waters of the Saskatchewan down to Lake Superior, with the right to charge tolls and to do a general manufacturing and merchandising business. They ask the proposed undertaking to be declared "for the general advantage of Canada," which would give it expropriation and other rights. The promoters of this enterprise are John Arbuthnot and Douglas C. Cameron of Winnipeg, William Chaplin of St. Catharines, Walter M. McGee of Plainfield, N. J., Theodore D. Dale of Montclair, N. J., Walter H. Dodd, Chas. D. Pullen and W. W. Jackson of New York, Chas. E. Loomis of Attica, Jas. S. Williams of Glastonbury, Conn., Thomas W. Gleason of Buffalo, Thomas Conlon of Thorold, and Welland D. Woodruff of St. Catharines.

STOVES AND TINWARE.

Storing Stoves.

"WHAT in the world to do with the stoves," is a question that is now bothering many a woman, says the Stoves and Hardware Reporter. If an appeal to the man of the house is made he will generally say, "Oh, leave 'em up; you'll find them there all right in the fall." But that doesn't suit at house cleaning time and the stove dealer who caters to this business can, with a little push, obtain considerable of it to do. An advantage to the dealer is that he generally gets the job of putting the stoves up again, furnishing repairs, new pipe, etc., and often a new stove. He gains an entrance to the houses of customers, has an opportunity to make friends with the women folks, and if he is wide awake and alert to his business this will lead to many sales. By all means, store all the stoves you can and make the charges reasonable, depending on future business.

New Form of Radiator.

A new form of sheet metal radiator has been perfected by W. R. Kinnear, formerly of the Kinnear-Gager Company, of Columbus, Ohio, but now of New York. It is made of either brass, bronze, steel or copper and is to take the place of the old cast iron radiator. It is pronounced by engineers and architects to be far superior to anything now on the market.—Stoves and Hardware Reporter.

Stove Founders' Association.

At the annual meeting of the Maritime Stove Founders' Association in Halifax, the following officers were elected:

Alfred E. Peters, of the Record Foundry Co., president.

H. S. Crowell, of the new Burrell-Johnson Iron Co., vice-president.

W. S. Fisher. of the Enterprise Foundry Co., secretary.

It was decided to make no change in prices for the ensuing year, although it is understood that a number of the western manufacturers have recently been compelled to advance prices.

"ART GARLAND" STOVES.

In last week's issue of HARDWARE AND METAL an item was inserted to the effect that The Frost Wire Fence Co., Limited, Welland, Ont., had taken "the sole selling rights for 'Art Garland' stoves and ranges in Canada." The item was credited to the Welland Telegraph, from which it was taken.

On Monday the following letter regarding the item was received from Hamilton:

Editor HARDWARE AND METAL,—We notice in your issue of April 23, that The Frost Wire Fence Co. have taken over the selling rights for the "Garland" stoves and ranges for Canada. We wish to notify you that we are the sole manufacturers of the above line of stoves in Canada, and have not made any arrangement with the above, nor any other firm, for the sale of our goods. We wish you would kindly have this correction published in your next issue.

BOWES, JAMIESON & CO.

Hamilton, April 25, 1904.

In reply to a request for an explanation of the misunderstanding the following was received from Welland:

Editor HARDWARE AND METAL,—Yours of the 26th received and noted. The only mistake is that paragraph in which we were quoted as having taken up the sole selling rights for the "Art Garland" stoves. The line that we have taken up is the "Garland," made by The Michigan Stove Co., of Detroit, the largest stove manufacturers in the world, and these goods have been sold in the Canadian market for a long period of years, and, therefore, they cannot conflict with Bowes, Jamieson & Co.'s line in any way. Trusting that this information will be sufficient, we remain.

THE FROST WIRE FENCE CO., LIMITED.

Welland, April 27, 1904.

NETTING MADE IN CANADA.

The B. Greening Wire Co., Hamilton, have had a large share of success this year in the manufacture and sale of netting. They have paid much attention to this line and have maintained such a particularly high standard of quality that it has in several cases been taken in preference to lines fully 20 per cent. lower in price.

DO NOT WANT RECIPROCITY.

Despite the agitation for reciprocity with Canada by the chief commercial bodies in several of the New England States, the movement is far from effectual, as may be judged from the report this week that the Massachusetts Republican State Convention at Boston, Mass., after a lively discussion on reciprocity with Canada, adopted a platform maintaining the principle of protection. It is the politicians, not the commercial organizations, which decide these matters in the United States.

HEATING AND PLUMBING

TORONTO WILL BE REBUILT.

IT is safe to say that, with decidedly few exceptions, all of the many large warehouses destroyed by fire in Toronto last week will be rebuilt as soon as men and material can be secured for the work. Already several of the stronger concerns have decided to rebuild, each decision calling for a warehouse much larger in every way than the one it will succeed. In fact, so far as can be learned the intention of property holders in the burned area is to build premises which will be more in keeping with the size of Toronto and of the commerce of that city.

It is generally recognized that for some time Toronto has been in need of warehouse and factory accommodation. Many firms were seriously cramped in the buildings they were occupying, but were deterred from moving by the simple fact that they were unable to secure more satisfactory premises.

Consequently instead of four or five storey premises, which have been the rule, it seems likely that the warehouses which will replace them will be from five to seven storeys.

There is unquestionably, too, a widespread disposition to pay more attention to fire-proof materials and equipment. The saving of the factory of Kilgour Bros., a building equipped with fire protection appliances, while buildings adjacent were totally destroyed, has been recognized as a great tribute to the value of these appliances and has done much to popularize them.

A careful estimate, made by a contractor of standing, is that fully 1,500 laborers, 300 bricklayers and stonecutters, 700 carpenters, 100 plasterers, not to mention plumbers, painters, steamfitters, etc., will be needed during the next three seasons to replace the destroyed buildings by larger and more modern ones.

It is understood that there will not be serious difficulty in securing the men necessary, but the question has been raised whether the material will be forthcoming or not. At first it was thought that there would be difficulty in procuring the bricks necessary, but the brick yards in and about Toronto have declared their ability to supply the market. Lumber, however, is now the doubtful quantity. There will probably be difficulty in getting supplies of hard in the quantities desired. But there is small likelihood that the scarcity will in any way interfere with rebuilding operations.

Another feature of the situation is the effect that the fire will have on the construction of dwelling houses in the city. There is a distinct need for more houses in Toronto, at all prices from $1,000 to $6,000.

It has been maintained by some that the effect of the fire will be to reduce the building of these dwellings; yet this has to be proven and the number of permits taken out during the past week does not in any way go towards providing such proof. There will probably be considerable activity in the construction of residences, despite the pressing need of warehouses and factories.

To Improve Building By-Law.

CITY ARCHITECT McCALLUM has prepared some amendments to the Toronto building by-law which will be submitted to the Fire and Light Committee of the Council at its next meeting.

For all buildings designated as dwelling houses, apartment houses, tenement houses, or lodging houses, reaching from one to ten storeys high, the thickness of the foundation both for brick and stone and every additional storey will be specified, ranging from 16 inches for stone and 14 inches for brick foundations for one-storey buildings, and 36 inches for stone and 31 inches for brick foundations in ten-storey buildings.

For all buildings designated as hotels, office buildings, warehouses, factory buildings, and public buildings the thickness of the walls will be as follows: For one-storey, 18-inch stone and 14-inch brick foundations, and for ten-storey buildings a 40-inch stone and 36-inch brick foundation. The higher the building the thicker the wall will have to be, ranging to four and one-half inch increases. If basement or cellar walls exceed twelve feet in height they shall, if built of stone, be increased six inches in thickness, and if brick four and one-half inches in thickness for every additional ten feet or part thereof in excess of twelve feet.

An increase of four and one-half inches in thickness of walls shall be made in all cases where walls are over 100 feet long without cross walls of equal height.

When any horizontal section of wall shows more than twenty-five per cent. reduction of area on account of flues, openings, or recesses, one-half brick shall be added for every succeeding interval of ten per cent. or part thereof reduction, provided that in walls of uniform thickness such reduction does not exceed fifty-five per cent. of the whole, or the masonry pier construction not more than seventy per cent. of each bay.

Whenever walls less than eighteen inches in thickness are utilized for the support of ordinary joists in buildings used for the sale, storage or manufacture of merchandise, or public livery, boarding or sale stables, ledges four inches wide shall be corbelled out in not less than four courses of brick for the support of such joists, and in buildings of all classes where furring strips, whether combustible or noncombustible, are used on brick walls, there shall be ledges equal to the thickness of such furring strips upon such walls, and in all cases where such ledges are built they are to be commenced at the bottom of the joists and are to be carried up to and levelled off at a line at least one inch above the top of the joists.

No recess or chase for water, soil, steam or other pipes shall be made in any exterior or in any other bearing wall to more than one-third of its thickness, and the recesses around said pipe or pipes shall be filled up with solid masonry or plastic non-combustible material after the pipes are in place for the space of one foot at the top and bottom of each storey. In all buildings all openings larger than four inches square, or chases deeper than four inches shall be located on the plans and left in the walls as they are carried up. No horizontal chases or recesses shall be cut in any wall.

When you talk, you want it to go for some good once for all, don't you?

You don't want to be obliged to talk, and argue, and force your goods continually, do you?

You want your goods to do some of the talking themselves, don't you?

RAMSAY'S PAINTS

will do some of the talking themselves, and save you time and worry.

People will pay a fair price for a good thing, and a good thing talks always to the user and to his neighbors.

Ramsay's show cards, newspaper "ads." and posters talk also, because they are attractive, they impress. They don't bluster, they talk confidently.

That helps you!

Pedlar People, Oshawa, Can., or 767 Craig St., Montreal, Que.

seat about 2,000 people, at a cost of about $60,000.

A new railway station will be erected by C.N.R. at Portage la Prairie. The new structure will have all the modern improvements.

Fire destroyed the Midland Railway Company's elevator, which had a capacity of 500,000 bushels. It will probably be rebuilt.

The Mount Royal Club, Montreal, will spend $160,000 on a modern fire-proof club house. New York architects will be asked for plans.

Western contractors have received the blank applications for tenders on the erection of the new C. P. R. hotel and station at Winnipeg.

Listowel, Ont., has passed a by-law to borrow $10,000 to complete the waterworks system, on which over $20,000 has now been spent.

Geo. Persechini is to erect a $60,000 tenement building in Winnipeg. Douglas Bros. & Co. and Walker & Howell have the contracts.

Building operations are brisk at Estevan, N.W.T. It is expected that $100,000 will be spent on them before the end of the season.

M. A. Fonseca proposes to erect a solid brick hotel on Higgins avenue, Winnipeg. H. S. Griffieth is calling for tenders for this building.

The Lariviere, Man., Pressed Brick and Tile Co. expect to have their works completed and to be offering their product for sale within a few days.

E. G. Laverdure, Ottawa, has bought a block of land on St. Patrick street, and will erect two rows of dwelling houses thereon. Sewers will also be installed.

James G. Taylor calls for tenders for a new office building for the Canadian Bank of Commerce at St. John, N.B., plans prepared by Darling & Pearson, St. John.

E. B. Ellingson, of Ashby, Minn., is erecting a store 24x60 feet at Fort Frances, Ont., which will be occupied as a general store by Mr. Carter, of Winnipeg.

The Builders' Exchange, Winnipeg, have elected E. Cass as president and W. W. Daly as secretary. The office of the exchange will be 482 1-2 Main street, Winnipeg.

There is some talk of a strike of iron workers in Winnipeg. If this occurs the construction of several premises, including the new Union Bank building will be interfered with.

The Montreal Harbor Commissioners will, on May 5, open tenders for four two-storey steel sheds, to average in cost about $200,000 each, for the harbor. Fifteen of these sheds are to be built.

Weichel & Sons' warehouse at Elmira, Ont., have been damaged to the extent of $6,000 by fire. The loss was principally in iron, wire, etc., in the warehouse and the tinshop equipment.

Stewart & Stewart, architects, Hamilton, have dissolved partnership and will be succeeded by Stewart, Witton & Taylor, Hamilton. This firm have plans for buildings to the value of $250,000.

J. N. Purcell is promoting a $220,000 hotel with 103 living rooms for Halifax, to be known as the Imperial. The plans and specifications call for a fire-proof structure, six storeys in height, containing 103 living rooms, 48 of which are to be provided with baths, and hot and cold water in all the rooms. Ten public baths, two on each floor, are also provided for. The dining room and kitchen are shown in the plan on the sixth floor.

Miller, Morris & Co. will have a brick and stone warehouse on McDermot street, Winnipeg. J. H. Cadham is the architect.

——

THE GALT ART METAL CO.

AT a meeting of the shareholders of the Art Metal Co., of Galt, the company was reorganized. The following officers were elected :

President—D. Spiers.
Vice-President—Hugh McCulloch, jr.
Sec.-Treas. and Managing Director — F. H. Hayhurst.

Mr. Hayhurst, the manager, is a young man of good business instinct and a wide knowledge of the metal trades. The energy and push for which he is noted should make him a valuable man to the company.

This company, which is capitalized at $100,000, will build a factory 150x60 feet, with power plant, offices, etc., in separate buildings. The construction of the premises will be rushed from the start as it is hoped to have machinery installed and operations started early in June. The company propose to manufacture all kinds of sheet material for the interior or exterior of buildings, including roofing, sidings and ceilings, and also all kinds of forged, stamped, pressed or cast goods accessory to the hardware trade. The highest possible grades will be produced in these several lines. It is the intention to begin on the manufacture of sidings, roofings, ceilings, etc., and later the various hardware branches will be added.

——

STEEL STRUCTURES ADVISABLE.

MR. A. GIBSON, of Boston, is in Winnipeg on a visit to his brother, Ald. J. C. Gibson, Fort Rouge. Mr. Gibson is incidentally looking over the prospect Winnipeg offers for work along his particular line. He has been associated with the erection of some of the largest steel frame structures in the States. On the big flat iron building in New York, a structure of 30 stoyers, he was foreman.

Speaking of our buildings generally, he thinks we should have adopted the steel frame earlier. "You have some good buildings," he said, "but you will find that the steel and fireproof structures will be a big improvement on those you already have." Asked as to whether the municipalities supplied water and light to such large buildings as the flat-iron in New York, Mr. Gibson said that all such buildings were self-contained as to both water and light. In some cases, where practicable, they had their own springs or water supply, and if not these they connected with the public supply and pumped it themselves. By this means the city was not required to maintain a high pressure to acommodate a few large buildings.

"Have you seen our steel bridges, Mr. Gibson?"

"Yes, I noticed one or two of them, and while they answer your present purposes, they will very soon be sadly inadequate to the requirements of your traffic. The truss bridge such as you have is not very popular. The bridge that is now in greatest favor is the Camber bridge. It is strong and more durable. Its most striking advantage, however, for street purposes is that it has no unsightly overhead obstruction."—Winnipeg Free Press.

——

CEMENT MEN ARE ANNOYED.

A strong delegation of representatives of the various cement companies interviewed the Minister of Railways and Canals, on the subject of the quality of cement which has been accepted by the Government for the Lachine canal, in spite of the clause in the contract which calls for a higher and more expensive grade. Considerable indignation is being manifested over the matter in many quarters; and this delegation, it is said, will ask for a definite statement of the Government's position in this matter.

——

MARLIN ARMS EXTENDING.

The Marlin Fire Arms Company have acquired the plant of the American Cartridge and Ammunition Company of Hartford, Conn., and have begun the removal of the machinery of that company to their own works at New Haven. The Marlin company by acquiring the Hartford company will soon be in a position to begin the manufacture of cartridges. The American Cartridge and Ammunition Company was organized in Hartford on August 15, 1901. It has a large plant on Pearl street in that city and was capitalized at $100,000. The amount of machinery which is of a specially patented design is quite large. All of it will be moved to New Haven.

ALABASTINE

ANNOUNCEMENT EXTRAORDINARY!

It has come to our notice that would-be competitors are telling the trade that The ALABASTINE CO. are burned out, and going out of business. Those whose names we were fortunate enough to have on our ledger know what the facts are, but the ledger we were using and had in the safe at the time the fire occured, is a new one Old books were destroyed, hence **all the trade** may not have been notified, as there were many names on the old books that had not as yet appeared on the new.

On the supposition that most, if not all, dealers are subscribers to and readers of "HARDWARE AND METAL," and because of the unscrupulous methods above referred to, we deem it proper to make the announcement that already building operations have commenced, and our factory will be running again in the shortest time possible, with improved conditions for making goods in our line. In the meantime, through the assistance of our jobbers, the most of whom are well stocked, and the co-operation of the trade generally, we expect to keep all supplied. Dealers are requested to send in orders for any goods wanted, and they will have the prompt consideration that has characterized our dealings in the past.

The ALABASTINE CO., Limited, PARIS, ONT.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

A PROJECT is on foot to erect cement works at Tod Creek on Saanich Inlet, B.C. R. P. Butchart, promoter of the proposed works, has asked for exemption from taxation for a term of years and it is expected that this request will be complied with. Mr. Butchart is connected with the Shallow Lake works, manufacturers of the Sampson brand of cement, in Ontario.

* * *

The Cape Breton Iron and Steel Co. have been incorporated with $250,000 capital. The officers of the new company are:

President and Genera Manager—K. J. Morrison.
Vice-President—P. R. Bentley.
Secretary-Treasurer—F. A. Hatfield.
Directors—R. M. Langille, J. W. Madden, H. C. V. Levatte, Reynolds Harrington.

* * *

The Dominion Concrete Company, Limited, have been incorporated with a capital of $40,000 to manufacture and deal in concrete building material, supplies, etc., manufactured from cement; directors to be William H. Anderson, Albert Langstaff and William Dillane, all of Kemptville in the County of Grenville.

* * *

Toronto Council have awarded the contract for a 6,000 foot steel conduit across Toronto Island to the James McNeill & Bros. Co., Pittsburg, Pa., at $14.48 per lineal foot, though the Board of Control had recommended that contract be awarded the Canada Foundry Co., Toronto, at $14.96. The total amount of the contract is about $80,000.

* * *

The Cement Block Machine Company, Limited, Toronto, have been incorporated with a capital of $40,000, to manufacture and deal in cement, artificial stone, brick, etc., and to enter into and carry on contracts for the erection of buildings, etc.; directors, Philip William Stanhope, Chas E. B. Adams and John Lavelle, all of Toronto.

* * *

The Vancouver Plating and Galvanizing Works have been organized by A. F. Barber, Vancouver. The company will occupy a building 52x25 in front of the Badminton Hotel and a modern plating plant has been installed. the company will plate goods with gold, silver, nickel, copper, brass or aluminum, besides galvanizing in all its latest features.

The Nasmith Baking Company, Toronto, will erect a large brick factory at the corner of Sherborne street and Moss Park place. The building will be three storeys at present, but the foundations will be laid to permit of three additional storeys being added. The cost is estimated at $90,000, but the extra storeys will increase the cost to about $160,000.

* * *

The Roblin Milling Company, Limited, Roblin's Mills, Ont., have been incorporated with a capital of $25,000 to acquire the grist mill of the late Edward Roblin, to operate the mill, to carry on a general flouring and milling business, buy and sell grain, flour, feed and farm produce; to acquire or erect wharves, warehouses, storehouses, etc., for storing and shipping grain, feed, flour and farm produce, etc.; directors, William H. C. Roblin, Ellen Roblin and Huldah N. Roblin, of the township of Ameliasburg; Donald E. Roblin, of Portland, Oregon; Richard O. Roblin, of Rochester, N.Y.; Mary Ann Cotter and Donald Roblin, both of Belleville, Ont.

Notes.

Robert Steele will build a planing mill at Treherne, N.W.T.

Hall & McNab intend erecting a 100-barrel mill at Melfort, Man.

The Ontario Pipe Line Co. have increased their capital from $40,000 to $500,000.

The Stratford Clothing Co. have increased their capital from $40,000 to $100,000.

The McLachlan Gasoline Engine Co., Toronto, have increased their capital from $39,000 to $100,000.

The St. Thomas Gas Company, St. Thomas, have increased their capital from $100,000 to $180,000.

McLean, Holt & Co., iron founders, St. John, contemplate the manufacture of stoves and ranges this Fall.

The Ottawa Furnace and Foundry Company, Limited, Ottawa, have increased their capital from $40,000 to $250,000.

The Niagara Falls Machine and Foundry Company, Limited, Niagara Falls, have increased their capital from $10,000 to $50,000.

J. E. Ward, Galt, has organized a company to be known as the Ontario Hair Works Co., and is equipping his plant with machinery.

Walsh Bros., Halifax, have established a plant with all modern machinery necessary for the manufacture of ornamental glass of all kinds.

The lumber mills of Ottawa have started operations for the Summer. Full forces will be put on by all the mills and some of them will be run day and night.

The Inglewood Pulp Co. intend manufacturing a large lot of lumber this year and to that end will put up two sawmills this year. One of them will be at Musquash, N.B.

Moose Jaw, N.W.T., has decided to install a waterworks and electric light plant. W. Ashbridge has been appointed engineer under W. A. Shipman for the construction of the plant.

Hamilton foundrymen are having trouble with the Iron Moulders Union. The foundrymen decided to reduce wages 5 per cent. but the union insist that the conditions do not warrant a reduction.

T. A. Lytle, of T. A. Lytle & Company, manufacturers of pickles and vinegar, Toronto, has purchased a large tract of land on Dundas street, on which the firm will erect a factory to cost about $20,000.

The Electric Development and Securities Company, of New York have been incorporated with a capital to be used in Ontario of not more than $100,000. Frederick K. Foster, of Toronto, is to be its attorney.

Walter B. Steeves, of Hillsboro', N.B., proposes the erection of a woodworking factory and was in St. John last week securing machinery for sash and door work. In addition to this a rotary equipment will be installed.

The Toronto City Council had under consideration this week a proposal to submit the question to the ratepayers of that city whether the municipality should buy the stock of the Consumers' Gas Co. It was decided not to do so.

The Smokeless Fuel Saving System, Limited, Toronto, have been incorporated with $100,000 capital to manufacture and sell smoke consumers, etc.; directors, Duncan Donald, M. P. Vandervoort, C. H. McArthur, T. B. Robertson and William Dawson, Toronto.

S. F. Bowser & Company have been incorporated to manufacture and sell self-measuring oil tanks, washboards, etc., provided that the company in so doing shall not use in Ontario a capital of more than $40,000. S. H. Rogers, of Toronto, is to be the company's attorney.

The Whitten-Drummond Co., have been incorporated to carry on the hardware business of the late W. J. Whitten, Toronto. The directors of the company are Jessie H. Whitten, Wm. A. Drummond, John Drummond and Mary A. Whitten; capital $10,000.

The Purity Mfg. Co., Limited, Toronto, have been incorporated with a capital of $40,000 to manufacture and deal in soaps, washing powders, washing compounds, flavoring extracts, etc.; directors, Isaac Leonard Wilson, Hattie May Sullivan and Charles Edward Sullivan, of Toronto.

Paterson's Wire Edged Ready Roofing

has successfully stood the test of Canada's variable climate for over twenty years, and is the only popular substitute for shingles.

We are advertising the above Roofing extensively in the "Farmers' Magazines" and in all cases we ask prospective customers to order our goods from their local Hardware Merchants.

There will be a very large quantity of our Ready Roofing sold in the future, and you can't blame us if you don't get your share of that trade.

U. M. C. NEW PRODUCTS.

The .32 Automatic Colt Pistol Cartridge is loaded with a special high power smokeless powder, giving high velocity and operating fr eel hrough the mechanism of the Automatic Colt Pistol (pocket model). Those with the soft point bullet will be found desirable for sporting pur poses, and those with metal case for military and target use.

RIM FIRE CARTRIDGES

The U. M. C. .22 automatic rifle (Winchester model 1903) cartridge is now ready for the market. New .22 short ungreased, 22 long ungreased, and .22 Winchester inside lubricated are inexpensive rim fire cartridges loaded with the best grade of smokeless powder. Boys a r calling for these cartridges, as they can be carried loose in the pocket without the old inconvenience of the greased cartridge. They will not lead he gun. "U. M. C. Ammunition shoots well in any gun."

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

KEMP MANUFACTURING CO., TORONTO, CAN.

MAINLY ABOUT OURSELVES

By The Editor

A TRADE paper, like any enterprise dependent on the good-will of thousands, must, to maintain the highest effeciency, have the sympathy and co-operation of its readers. If it does not possess this sympathy it cannot keep fully alive to the developments in its field and is in danger of deterioration, and consequently of loss of prestige and power.

Hardware and Metal has rejoiced in an exceptional degree of co-operation on the part of both its readers and its advertisers. In fact, of recent years the interest taken in the development of the paper by some of its readers has literally compelled expansion along lines that a few years ago were not thought of even by its publishers or by its "business scouts," the advertising staff.

* * *

The development in Hardware and Metal which is arousing greatest interest at the moment is in the "Machinery" department. This paper was started, and for many years continued, as a strictly hardware merchant's newspaper. Its subscribers were chiefly the hardware dealers of the Dominion. gradually, however, its scope has extended. The greater proportion of manufacturers in the country make hardmare or metal goods such as are advertised in this paper. Other manufacturers are large buyers of metal or other materials. In order to keep in touch with what their competitors were doing and to read our market reports the great bulk of metal-working manufacturers of Canada have become subscribers to Hardware and Metal.

These subscribers have steadily exerted an influence on the editorial policy of this paper, until it has been found necessary to establish a department in the paper in which information of special interest to them could be supplied. The rearrangement of our metal market reports to include regularly the latest information regarding market conditions in Pittsburg and London, was one result of this expansion policy. Another result was the inauguration, somewhat over a year ago, of a "Machinery" department, in which information of particular interest to machinists, foundrymen and other manufacturers could be furnished. No effort has been spared to build up this department and to make it of greatest service to users of machinery, particularly iron-working.

* * *

The point of development has been reached which makes it possible to make this department of even more practical service that it has been in the past. To this end it has been necessary to add to the editorial staff of the paper a writer whose academic training had fitted him to be of special service to this department. We have been fortunate in this respect, having secured the services of Mr. Fraser S. Keith, E.E.

Mr. Keith is a practical hardwareman, having had several years' experience in a retail harware store. At the conclusion of his course in engineering at McGill University, Montreal, he graduated with such honors that he was appointed immediately to a position in that university as demonstrator in the faculty of engineering. Mr. Keith has already contributed several articles to Hardware and Metal which have attracted considerable attention. As he will take charge of the editorial work on our machinery department at Montreal there is every reason to expect that this department will be strengthened materially and in the most practical manner.

In announcing this addition to our staff, with the consequent increase in the attention paid to machinery, we feel confident of the appreciation of our readers and of their co-operation in our endeavors to make this department as bright, practical and valuable as any feature of the paper. This can be done in several ways.

For instance, has any problem in mechanics or engineering arisen for which you desire a solution? If so, send in a detailed inquiry and let us get an answer for you.

Have you made a new machine or turned out any new product? Write us an account of it. This may be free advertising for you, but we are quite willing to give you this if by so doing we can add to the value of our paper from the readers' standpoint.

Have you made a study of any particular subject relating to machinery? Send us an article containing your views. Others may be interested in the same subject and may add to what you say something of value to you.

Do you want machinery or supplies of any nature? Send us a statement of what you desire and we will help you to get it.

* * *

While, however, additional care will be given to the machinery department, the attention to the other features of the paper will be in no degree lessened during the coming months. Indeed, it is hoped that the rearrangement of the editorial staff will make possible the strengthening of each department in the paper.

The "Paint and Oil" section of Hardware and Metal has always had our serious thought. Our market reports on paints and oils being the only authoritative report published in Canada,

have long been recognized as standard, the quotations given as official. We intend to maintain this space and to make these pages as interesting as they now are valuable.

The "Plumbing" department of Hardware and Metal has, too, received much consideration. Hardware and Metal includes among its subscribers practically all hardware merchants who handle and install plumbing goods; also the great majority of the master plumbers throughout the Dominion. We have not, it is true, received support from Canadian advertisers of plumbing goods in proportion to either our attention to that department or to the number of buyers included among our subscribers. Yet, recognizing the right of our readers interested in plumbing to special information along this line, we are probably devoting more attention to plumbing than at any other time in the history of the paper.

So closely related to plumbing are building operations that we have recently devoted a great deal of space to "Builders' and Contractors' Supplies," a department which is appreciated by a great number of our readers and has enabled us to give them much valuable information and to increase the attention that many hardwaremen are paying to this line.

Our "Stoves and Tinware" department, we must confess, has not yet attained to the magnitude that we desire and we hope within two or three months to present our readers with technical articles dealing with tinsmithing practice which shall be of considerable value to them. In the meantime our columns are open to any discussion or to the insertion of any news relating to stoves, furnace work or tinsmithing.

Attention has been called quite recently to our department of "Catalogues, Booklets, etc.," so that we need only state now that this department is inserted with the intention of giving special attention to reviews of trade publications such as catalogues, booklets, etc. These notices are published gratis and it is expected that the trade will watch this page carefully and thus keep in touch with the new catalogues which they should have on file for reference.

POETRY IN SCALES.

A CONVENTION was held recently at St. Johnsbury, Vermont, of representatives from the various branches of The Fairbanks Co. The following poetical effusion was read at a dinner held in connection therewith :

If you go a fishing
And you catch a whale,
And you want to weigh it,
Use a Fairbanks scale

One moment, merry gentlemen,
Listen to my tale ;
Follow the procession and
Use a Fairbanks scale.

Though rough may be the weather,
The wind may blow a gale,
Be it rain or be it shine,
Use a Fairbanks scale.

Men who are up and doing
And don't intend to fail,
Men of energy and common sense,
Use a Fairbanks scale.

You may have it in a barrel,
Or have it in a pail,
But when you want to weigh correct,
Use a Fairbanks scale.

Men who travel on the railroad,
Or on the ships do sail,
When they weigh their merchandise
Use a Fairbanks scale.

You may receive it by the carload
Or receive it by the bale,
You very soon can weigh it
On a Fairbanks scale.

You may travel over mountain,
Valley, plain and dale,
You cannot find one better
Than a Fairbanks scale.

They use them in the gold mine,
They use them for the mail;
Anywhere o'er land and sea,
You see a Fairbanks scale.

You may travel by the ocean,
Or travel by the rail,
East and west, and north and south,
You see a Fairbanks scale.

So no matter what the weather,
Snow, cold, wind or hail,
Use the trusted and reliable
The famous Fairbanks scale.

From the Atlantic to Pacific,
Immense is now the sale;
Demand constantly increasing
For the Fairbanks scale.

CAVERHILL, LEARMONT & CO. BASEBALL CLUB.

At a meeting of the baseball enthusiasts among the staff of Caverhill, Learmont & Co., Montreal, the following officers were elected for 1904 : Hon. president, T. H. Newman, Esq.; president, J. W. Dowling; secretary, Jack Davidson. Caverhill, Learmont & Co.'s hockey team won the hardware championship last Winter, and the baseball club are looking forward to similar good fortune.

CATALOGUES, BOOKLETS, ETC.

For the convenience of its readers HARDWARE AND METAL has opened its columns for the review of catalogues, booklets or other such publications issued by manufacturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. It is requested that when any of the trade write for any booklet mentioned in these columns that they credit HARDWARE AND METAL as the source of their information.

SUPPLEMENTARY "GREEN BOOK."

THE Smith & Hemenway Co., and the Utica Drop Forge & Tool Co., have issued a supplement A. to their green book of hardware specialties. The "Green Book" issued by these firms is familiar to all hardwaremen, and our readers will want this supplement. Cast hammers, hatchets, plyers, can openers, tack claws, chisels, nail clippers, etc., are among the lines illustrated. Write for a copy to the Canadian sales agent A. C. Jenking, room 215, Coristine building, Montreal.

PACIFIC STEAM POWER PLANTS.

Chas. C. Moore & Co., engineers, San Francisco, California, have issued a very neatly bound book illustrating and describing in an attractive way some of the work they have done during the past few years on the Pacific Coast and the Hawaiian Islands. This firm is a designing and constructing engineering concern, making a specialty of high-grade work. Power plant construction has always been one of the specialties of this engineering firm, and they have won no mean reputation for such installations. The firm is prepared to make plans and estimates, or undertake the installation of any class of motive power work in all its branches, electric railways or lighting plants, mining and milling machinery, hydraulic work, etc., examples of which installations may be found by any of our readers who are interested in steam power plants of the Pacific Coast, which may be had by applying to the engineering firm.

THE THOMPSON DAMPER.

Richard Thompson & Co., 126 Liberty street, New York, have issued a catalogue announcing that they are now making the "Thompson" damper and

WIRE NAILS
TACKS
WIRE
Prompt Shipment
The ONTARIO TACK CO.
Limited
HAMILTON, ONT.

pressure regulator, and that they are no longer acting as general agents for the "Spencer," although they furnish them if called for, and they still make and carry in stock all repair parts. One or two claims for the Thompson damper regulator are that it has power to move the damper or dampers in both directions by water pressure, nor does it of necessity have them wide open or shut. It will close or open the damper or dampers on a variation of one pound of steam; or will make a partial stroke in either direction and stand at any intermediate point between the open and closed positions. On account of this positive power in both directions connections can be made with the dampers (if the situation is favorable) by rod direct to damper lever, bell crank or counter shaft, and thus dispensing with the chain, pulleys and counter weights.

——

THE LAURIE ENGINE CO.

The Laurie Engine Co., Montreal, have issued a circular describing their "Efficient Feed Water Heater and Purifier." They are issuing an engine catalogue containing valuable engine data at an early date, and will send both of these to anyone on application.

——

HARDWARE NOVELTIES.

The Novelty Mfg. Co., 237 King street east, Toronto, are manufacturing many specialties which the hardware trade might handle to advantage. Among these are a nickel-plated skirt and trousers hanger to sell at 50c each; a folding seat for churches, stores, etc.; a pocket hitching post, to sell at $1 each; an anti-friction shaft carrier and safety attachment in six different finishes, to sell at from $1.75 to $2.75; the spoke, felly and tire tightner, to sell at $2. Further information will be supplied any readers of Hardware and Metal on request.

——

"BLUE BOOK OF ARMS AND AMMUNITION."

Caverhill, Learmont & Co., of Montreal and Winnipeg, have just received from their printers the first copies of their "Blue Book of Arms and Ammunition." The name is a happy one. A "blue book" is at least supposed always to be crammed with information, and the hardware merchant who, attracted by the name, turns to this catalogue for information will not be disappointed. The book is full of illustrations and in every instance the description and particulars supplied are exactly what the busy merchant wants to find in such a book. "Blue books" are commonly supposed to be uninteresting, but politicians and others who are seeking a particular kind of information are apt to find them entertaining. Hardware merchants are as much interested in arms and ammunition as the politicians are in the revenue of the postoffice department, and they cannot fail to find this catalogue of interest.

The line of goods illustrated and described is an extensive one and interesting prices are quoted subject to the usual discounts, of course. The catalogue treats extensively of rifles and ammunition, but is not confined to these lines. Sportsmen's accessories of various kinds are illustrated and described. Cartridge belts, powder flasks, gun cases, hunting coats, mariners' compasses, sportsmen's knives, etc., in great variety are described and priced. Skates, sleighbells, and sewing machines are treated in the concluding pages.

For a sporting catalogue it is an ambitious effort, handsomely designed, and it is so complete that no up-to-date hardware merchant should be without one. The cover design is very handsomely executed in blue, red and white, and the grade of paper used is of the first quality. A book of this kind is scarcely intended for promiscuous circulation—it is too valuable. Caverhill, Learmont & Co. will, however, mail a copy to any hardware merchant who writes for one and mentions Hardware and Metal. Write for one either to Montreal or Winnipeg.

A Few Selling Arguments

We present for your consideration four strong arguments why it will pay you to sell *The Sherwin-Williams Special Interior Colors,* a line of soft, egg shell gloss, velvety, artistic colors for finishing inside walls and ceilings and woodwork.

1. They pay a good profit in money and in satisfaction.

2. They are in good demand in almost every section of the Dominion. They're liberally specified by leading architects everywhere. Used extensively in hospitals, government and public institutions, office buildings, homes, etc.

3. Through their good quality and their artistic finish they are trade winners and business builders—help your general paint sales.

4. They are backed by The S-W. Methods and Advertising—by the progress and push of the largest paint makers in the world.

There are many more sound reasons why you should sell *Special Interior Colors.* We'll be glad to place them before you if you'll write us for prices and full information.

MERCURY ARC LAMPS.

In a store window on St. Lawrence street, Montreal, two mercury arc lamps have been attracting considerable attention lately. They are the first to be used commercially in the city. The faces of the crowds that collect outside are illumined with ghastly shades, which seems to debar this form of light being universally adopted.

Business Changes

ONTARIO.

J. A. Tuckey, general merchant, Lobo, has assigned to A. M. Towe.

The Cyclone Woven Wire Fence Co., Toronto, have obtained charter.

J. Aubin, general merchant, Wallaceburg, is removing to Belle River.

R. R. Paul, general merchant, Poland, has been succeeded by R. B. Paul.

D. McBrien, harnessmaker, Goderich, has sold his business to D. Stoddart.

The W. J. Bradley Machine Co., Toronto, have assigned to E. R. C. Clarkson.

C. J. Lafebave, general merchant, Ruscom Station, has sold out to A. and D. Laporte.

The Weston Trading Co., general merchants, Weston, have been succeeded by D. Rountree & Sons.

M. T. Cathcart, general merchant, Barwick, has executed a trust deed in behalf of his creditors.

A meeting of the creditors of J. A. Tuckey, general merchant, Lobo, has been called for May 10th.

The plant, etc., of Taylor & Lount, manufacturers of brush handles, etc., Markham, is advertised for sale by assignee.

C. E. Steere, general merchant, Mount Brydges, has admitted C. W. Dingman to partnership; the style of the firm name now is C. E. Steere & Co.

QUEBEC.

R. Sullivan, paint dealer, Richmond, is dead.

J. A. Gordon, plumber, Montreal, has registered.

Bernier & Bernier, contractors, Levis, have registered.

J. Z. Gagne, general merchant, Howick, has compromised.

The Quebec Shoe Machinery Co., Quebec, have dissolved.

Rochon & Bousquet, contractors, Montreal, have registered.

S. Dore & Co., builders, Montreal, have dissolved partnership.

Alexis & Harbeau, roofers, Quebec, have dissolved partnership.

J. L. Sequin, general merchant, St. Simon, has assigned to H. Lamarre.

U. Phoenix, general merchant, Windsor Mills, is offering to compromise.

The stock of Dufour & Co., general merchants, Chicoutimi, has been sold.

MACHINERY

THE MACHINERY MARKETS.

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, May 6, 1904.

A FURTHER slight improvement is noted this week in the local machinery market, and although there is no exceptional activity in any one line the volume of business is fairly satisfactory. Two or three small sales of iron working machinery have been made to Montreal concerns this week, and the trade are figuring on some machine tool specifications of considerable importance.

In engines and boilers there is still a fair trade, and every week sees deliveries made and orders received for a few engines and boilers, generally for sawmill requirements. A planing outfit was sold by a Montreal house to a firm near Quebec this week.

Prices throughout are being well maintained. There is no disposition among the Canadian manufacturers to make any concessions of importance, and with a better feeling in the United States market there is no danger of a break in the market. Most buyers have already come to this conclusion and many who, a few months ago, were disposed to delay in the hope of better prices are now definitely on the market. The indications point to an increased business in May, but it is not expected to compensate entirely for the slack trade of the first four months of the year.

——

Ontario.

Office of HARDWARE AND METAL.
10 Front street east.
Toronto, May 7, 1904

THE situation on the machinery market this week is much the same as last. Local dealers report that the trade is opening up well for May, and on an average is somewhat better than at this time last year. The demand for machinery in consequence of the recent fire in Toronto has had to a certain extent made business good during the last two weeks. The demand for woodworking machinery in Western Ontario is good. A prominent lumber merchant told Hardware and Metal, that in a recent trip through that district he found that the demand for lumber was phenomenal, and that in very many places planing mills were adding new machinery to take the place of that which on account of its size or condition could not turn out the desired amount of lumber. In a great many instances small tools are being replaced by larger ones, without any floor space of the mill being extended, while in some cases the mills are being enlarged.

The improvement last week was noted in all lines, and this week that condition of affairs still continues. Boilers, engines, iron and wood working machinery all have a good demand.

Since the fire there has been a good demand in electric motors and generators. Local manufacturers report that all the machines they had on hand are gone, and their factories are very busy.

——

Smelting by Electricity.

THE return of the commission sent to Europe to investigate the smelting of iron ores and the making of steel by the electro-thermic processes, has aroused considerable interest. The commission consisting of Dr. Haanel, Mr. C. E. Brown, of Peterboro' electrical expert, and Mr. Thomas Cote, secretary, first went to England, and from there to Sweden, Germany, France and Italy. It was in Livet, Italy, that the most important observations were made by the commission. There 90 tons of iron ore were turned into pig iron for the benefit of the commission, and Dr. Haanel expressed himself as well pleased with his observations.

Samples were brought back, and Prof. Harbord will report on the quality of the steel and the cost of manufacture; Mr. Brown will report on the quantity of electric energy used in the process; after these statements have been given Dr. Haanel will be in a position to make definite statements regarding the commercial value of the processes.

A Unique Machine.

AN English engineering firm has recently introduced a patent machine for making compressed sawdust fire lighters. The lighters made by the machine are in the form of a neat briquette. There is no dipping to be done and no waiting for the drying of lighters; immediately the lighters leave the machine they can be parcelled up and sent away. There is no timber used and no sawing, wiring or nailing. The new lighter is made of sawdust, or other shop waste, and a certain cheap chemical ingredient. When these two are mixed the resulting material is taken in hand by the machine, being fed into suitable moulds carried in a heavy table, which is made to revolve intermittently around a vertical shaft as centre. The table is carried upon ball-bearings, which is only one of the details upon which great care and attention has been bestowed, the whole result being a perfectly made machine which in turn produces these fire lighters in the most expeditious and perfect manner. After the moulds are filled, they are carried round to the powerful compressors and then ejected by suitable cams, after which the lighters are scraped off the table by a reciprocating arm on to a chute, or if preferred a belt, which conveys them through a small opening into a room where the fire lighters are wrapped up in parcels ready for their destination.

——

The Automobile Show.

CONSIDERABLE credit is due to the Canada Cycle and Motor Co. for the able and energetic way in which they promoted the first Automobile Show in Toronto. Besides the electric machine, the "Ivanhoe," manufactured by the company, there were on exhibit a large number of American machines, ranging in price from $1,100 to $7,500, and in power from 8 h. p. to 40 h. p. Among these styles were the "Peerless," the "Packard," the "Thomas," the "Ford," the "Auto Car," the "Stevens-Duryea."

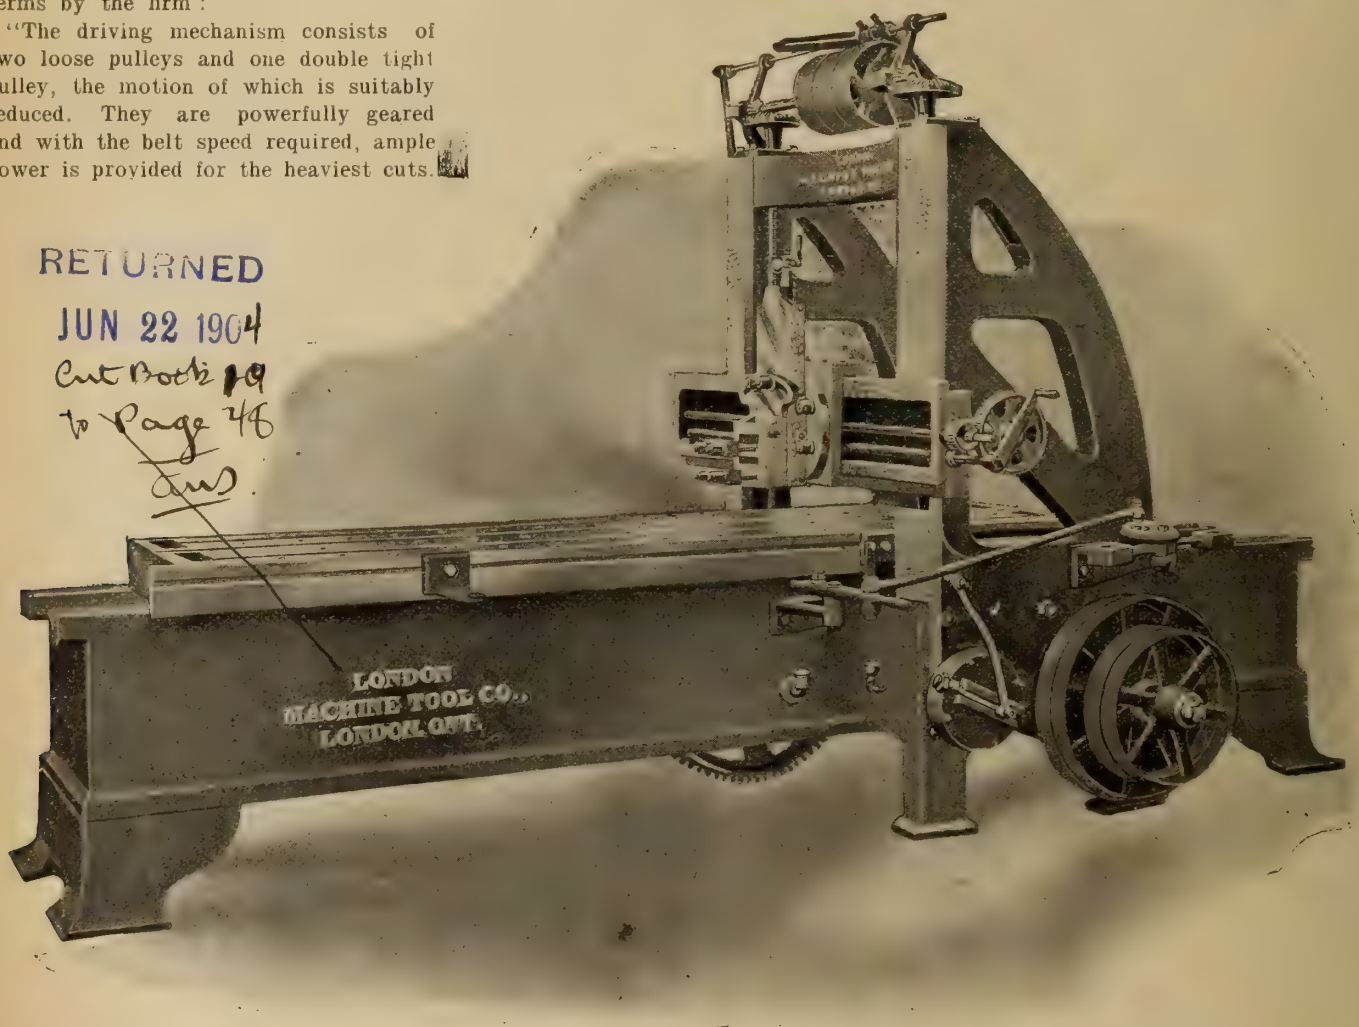
In the showrooms these machines were conveniently arranged so as to show their various features, while outside each one was duplicated so as to give a practical illustration of their respective powers.

A CANADIAN-BUILT PLANER.

FOR about twenty years the London Machine Tool Co., London, Ont., have been building machine tools, their line including lathes, radial drills, plain drills, presses, punches, rolls, steam and board lift hammers, boring mills, etc. Their tools have won a wide reputation throughout the Dominion and are steadily increasing in popular demand.

One of their strongest machines is their planer, details of the construction of which are given in the following terms by the firm :

"The driving mechanism consists of two loose pulleys and one double tight pulley, the motion of which is suitably reduced. They are powerfully geared and with the belt speed required, ample power is provided for the heaviest cuts.



RETURNED
JUN 22 1904
Cut Book 19
to Page 46

All gearing and rack on our planers is cut from the solid on accurate gear cutting machinery. Small driving pinions are cut from solid steel bar. The driving gear or bull wheel is large in diameter, of wide face and coarse pitch. All shafting is of open hearth steel. When desirous, we can furnish all planers with right angle drive at slight additional cost.

"The cam motion is exceedingly smooth in its action. It is designed so that when the planer is reversing, the forward driving belt shifts entirely over to the loose pulley before the reversing belt is shifted on to the tight pulley and in driving forward the reverse belt shifts entirely over to loose pulley before the driving belt is shifted on to the tight pulley. This reduces the squeaking of planer belts to a minimum and also lengthens considerably the life of the belt. The cam is entirely under the control of the operator, being linked to hand lever placed in most convenient position. We generally make the speed of reverse to drive forward in the ratio of about 3 to 1.

"A safety device is provided so that the planer table cannot be accidentally moved while operator is placing tools in position. This pin is placed on hand lever so that operator can instantly and without any trouble put stop in position. This pin is also made so that it cannot accidentally be thrown in while planer is running.

"The bed is made in deep box form of close grained iron. The sides are straight, neatly flanged on outside and inside at base. The cross braces are heavy, close together and the V's being well ribbed to web make a very stiff and strong construction. The centre to centre of V's on all our planers is exceptionally wide, as may be seen from specifications. The V's are also very wide. The bed is made sufficiently long to prevent table from lifting under heaviest cut when table is at extreme end of stroke.

"Oil pockets are provided on all planers from 30 in. upwards. These pockets contain rollers that press against the V's on table by means of springs, causing perfect lubrication of sliding surfaces. To oil V's, it is only necessary to keep these pockets half filled with oil, the planer will do the rest.

"The table is made deep and stiff, being well ribbed crosswise and lengthwise. The V's have ample surface and are so designed that it is impossible for grit or shavings to drop through table on to the sliding surface where they are sure to cut and score. The dirt will drop through table but will drop on the outside or inside of bed where it can do no harm. On account of the great

width of centre to centre of V's, and weight of table, our planers possess exceptional stability when taking heavy cuts at extreme width of planer.

"Round holes are generally drilled in planer tables. Many customers, however, prefer oblong or cross-shaped holes and we can make same to order. The T slots on table, three in number, are cut from the solid. They run the full length of table and are placed one in centre and one directly over each V. Pockets of ample dimensions are provided at ends of table.

"The rack is accurately cut from solid and is held to planer by means of screws and dowels. The screw holes are counterbored to the full diameter of screw so that the full section is available in resisting shear.

"The housings are made in heavy box form except in smallest sizes. They have a good bearing on bed to which they are securely tongued and bolted. The housings are made in a form best calculated to resist the strain due to the heaviest cuts. These housings have a foot on floor relieving the bed of any bending movement. The faces are carefully scraped to cross bar and neatly polished and frosted.

"The arch is deep and wide, is securely bolted to both uprights, making a very rigid construction.

"The cross bar has long bearing on housings, and is strongly reinforced at centre by box of girder form cast solid with bar. The bar is raised and lowered by power on all sizes from 30 in. up. The face of bar is scraped, polished and frosted. The bar is made sufficiently long to allow a cut to be taken full width of planer without shifting tool. When the planer is provided with two heads the bar is made long enough to accommodate extra head, and still allow room for a cut the full width of planer.

"The head has ample bearing on cross bar and is carefully scraped thereto. The head has power feed in every direction. Swivel is graduated to degrees. All parts of head are carefully scraped to one another, so that, while allowing sliding motion for the different parts, there is no play. The heads may be operated from both sides of machine. All nuts on head are extra long and case hardened.

"The feeds vary from zero to almost any desired quantity and can be changed while the planer is in motion. The feed is actuated in smaller sizes by friction gear which for many years has asserted its superiority over all other types by its simplicity, its non-liability to get out of order, its easy adjustment and power. On large planers we use a positive drive which on the heaviest feeds will not slip. Feeds are all reversible, being reversed by the usual reversing pinions. Feed rack is of steel cut in solid from cold drawn steel bars. The rack pinion is of steel, preventing breakage which is bound to occur where cast iron is used.

"Side heads can be placed on housings of all planers from 36 in. upwards where specially ordered. They are provided with hand and power feed vertically and can, if necessary, be provided with power feed in any direction. The shoes are carefully scraped to housings and the whole head, when not in use, can be run below the table to be out of the way, the face of housing being left long enough for this purpose.

"Countershafts are equipped with self-oiling bearings, having receptacle below for holding the oil. The pulleys are of ample size and width to transmit the power necessary. Countershafts are all carefully balanced and are equipped with all necessities save shifter. When necessary, we can furnish two speed countershaft, fitted with friction clutch at a slight additional cost. Variable speed countershaft, with constant return, can also be employed to advantage at times. We are prepared to furnish these also. While our planers are arranged for countershaft drive, we are prepared to supply any style of motor drive. Sometimes the motor is placed on top of machine and sometimes at side and connected to machine by gear, belt, or silent chain gearing.

"Often customers find it advisable to buy a standard planer widened out, this saving the buying of a larger planer. On account of the extra width of centre to centre of V's and weight of planer, our planers possess exceptional stability when thus widened out, and the heaviest cuts can be taken at edge of such planer without danger of lifting table. While we do not recommend widened planers generally, we do recommend our planers in such cases as is found advisable to use them."

——

Morton's Tool Steel.

B. K. Morton & Co., Sheffield, Eng., manufacturers of high-grade tool steels have already established a wide connection in Canada, but have determined to further extend the scope of their operations here. They have appointed as their agents for Ontario Baines & Peckover, Bay street, Toronto, who will carry a stock of their steel.

B. K. Morton & Co. make tool steels for every purpose but make an especial feature of "Alpha" high-speed steel, for taking deep cuts at high speed. Tests show turning 3-16 in. cut (3-8 in. reduction in diameter) at 65 feet per minute Siemens Martin bar .25 carbon; turning 1-2 in. cut (1 in. reduction in diameter) at 25 feet per minute Siemens Martin steel bar .25 carbon. It is expected that B. K. Morton's steels will gain for themselves in Canada the enviable reputation they enjoy in Europe and the east. Twist drills are made from "Alpha" high speed steel, that will go through stock impossible to drills made from ordinary steels, and at as high a speed as the machine can run. Baines & Peckover will carry these drills in stock in standard sizes and shanks.

——

Bickford Improved Plain Radial Drill.

ONE of the most modern radial drills offering to the Canadian trade is the "Improved Plain Radial Drill," manufactured by the Bickford Drill and Tool Company, Cincinnati, and sold in Canada by H. W. Petrie, Toronto. The strong features of this drill are given by its makers as follows:

The sleeve is mounted on a stationary stump, which extends up to and has a bearing at the top of the machine. This is equivalent to a double column, and affords that stiffness which is so essential to true work.

The arm is raised and lowered by power under the control of a conveniently located lever, is easily swung around and quickly clamped. Made in pipe section, every part of which is commensurate with its load, the arm possesses a degree of strength unequaled by any other form of construction.

The back gears are fitted with friction clutches, which, without having to stop the machine, give instantly for each position of the driving belt or set of driving gears, four changes of speeds, each of which exert at the spindle more than double the pulling power of the next faster one.

The spindle has sixteen changes of speed, arranged in geometrical progression, and is provided with both hand and power feed, quick advance and return, safety stop, automatic trip, dial depth gauge and hand lever reverse. An engraved plate attached to the arm shows the operator how to obtain the proper speeds for different metals and diameters of drills.

The depth gauge answers a double purpose: besides enabling the operator to read all depths from zero, which does away with the usual delays concomitant to scaling or calipering, it supplies a convenient means for setting the auto-

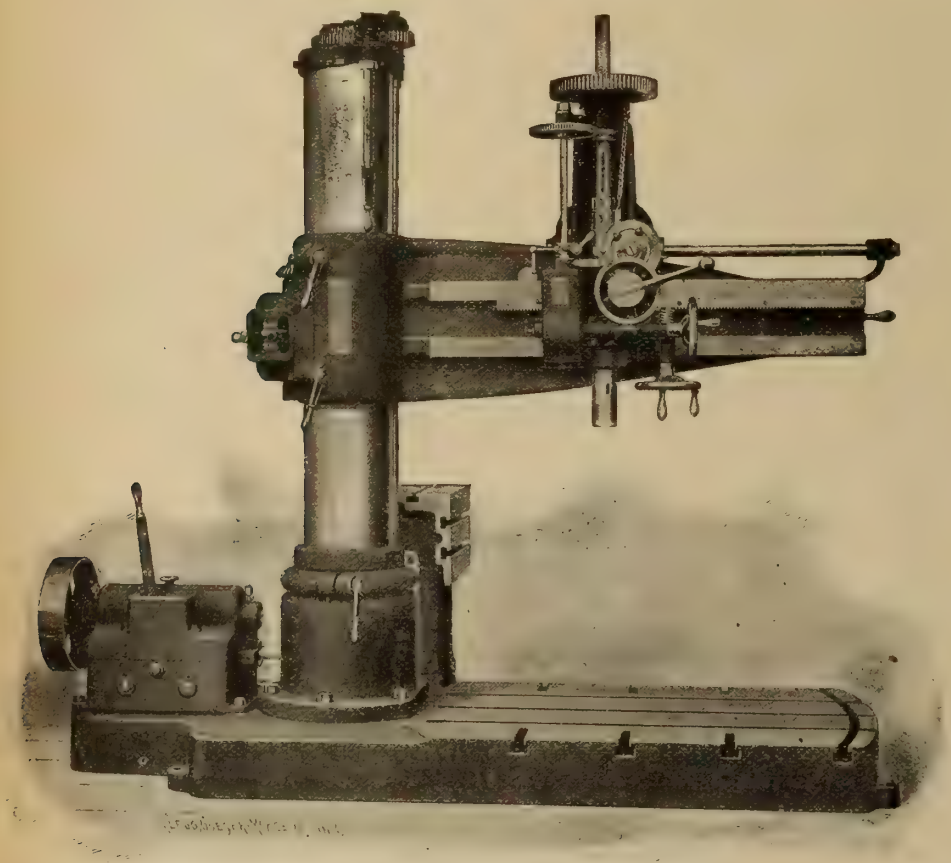
matic trip, the graduations showing exactly where each dog should be located in order to disengage the feed at the desired points.

The automatic trip operates at as many different points as there are depths to be drilled at one setting of the work; in addition, it leaves the spindle free, after any intermediate tripping, to be advanced, or raised and advanced, or traversed its full length, without disturbing the setting of the dogs; it also throws out the feed when the spindle reaches its limit of movement.

The feeding mechanism furnishes eight rates of feed, ranging in geometrical progression from .007 in. to .064 in per revolution of spindle, each of which is instantly available, eliminating all loss of time incident to shifting belt, or to operating under a feed of unnecessary fineness. An engraved plate attached to the head shows the operator how to obtain each of the feeds.

The tapping mechanism is located on the head, and permits the backing out of taps at any speed with which the machine is provided, regardless of the speed used in driving them in. It is fitted with a friction clutch operated by a lever, the handle of which extends around under the arm within convenient reach of the operator.

The driving mechanism consists essentially of a pully, four pairs of gears, two friction clutches and an operating lever, by means of which any one of four speeds is instantly available, saving, as in the feed, all loss of time incident to shifting a belt on a cone, and making it possible to set the machine, without alteration, at right angles to the line shafting, or to drive it from below the floor when it is desired that the arm should be free to describe a complete circle.



Nos. 1, 2 and 3 Improved Plain Radial Drill.

Machinery and Electrical Notes.

At the annual meeting of the Cunard Steamship Company recently it was decided to adopt the turbine system of motive power on the two new steamers being built by the company from a loan of $2,600,000 from the British Government. They also decided to equip one of two large boats of moderate speed and good accommodation which they intend building for the New York service with turbines.

The patent of W. P. Henry, Montreal, number 357,791, for a check rein for harness, expired on Feb. 15.

The Cape Breton Electric Co., Ferry Wharf, Cape Breton, are making extensive improvements to their general offices.

The street railway commissioners of Guelph are considering the installation of a storage battery plant.

Kennedy & Sons, Ltd., Owen Sound, are constructing an office building in connection with their foundry.

E. H. McHenry, chief engineer of the C. P. R., has resigned his position and severed his connection with that company.

C. H. Hines, who has been acting as electrical engineer for the C. P. R. for the past six months, resigned last week to take up work in Mexico.

The Smart-Turner Machine Co., of Hamilton, have bought out the Hamilton Motor Co. They will operate both these companies.

One great advantage of the vertical type is the economy of space which it allows. The Curtis turbo-generator is of the vertical type.

The London branch of the Amalgamated Society of Engineers held their 25th annual supper, concert and dance in London recently.

The town of Listowel, Ont., has carried a by-law authorizing the town council to borrow $10,000 for the completion of the waterworks system.

The H. W. Petrie Machinery Co., Toronto, have just installed a large improved Bickford radial drill for the Gasoline Engine Co, Toronto Junction.

S. H. Chapman, president of the Ontario Wind Engine and Pump Co., Toronto, has arranged for the erection of a temporary warehouse in Winnipeg.

J. H. Findlay, Strathcona, Ont., has had a 150 h.p. automatic engine and 100 h.p. boiler installed by the H. W. Petrie Machinery Co., Toronto.

A number of local business men of Fort William, Ont., have proposed to form a company to build and operate an electric street railway in that town.

E. Nixon, die-maker, King street, Toronto, has been increasing his plant and has had the H. W. Petrie Machinery Co., Toronto, install an additional Cincinnati lathe.

The Toronto Suburban Railway Co. are remodeling their power house on the Weston road. A 300 h.p. Laurie heater and purifier has been installed by the H. W. Petrie Machinery Co., Toronto.

It has been suggested that the city of London establish a pumping station at the J. D. Saunby mill, on the Thames River, to be used to supply water to the city for purposes other than domestic.

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

CRYSTAL REGISTERED TRADE MARK CORUNDUM

To Metal Polishers

Craig Mine Corundum is next to the diamond in hardness and the grains have very sharp points. Some manufacturers at first complain that it bites too deeply into steel or iron and therefore pulls out of their glue. Any intelligent user can see this is a good fault. When users adapt their glue to it they say it does twice the work of emery.

Write us for information regarding glues.

The Canada Corundum Company, Limited
TORONTO, CANADA.

In case this is done pumping machinery will be needed.

W. J. Thomson, manager of the Facing Mill Co., Hamilton, has been ill with pneumonia, and has gone south for his health. He is expected back in a few days, and it is hoped he will be well enough to resume his work.

The Ann Arbor Machine Co., Ann Arbor, Mich, have communicated with Brantford, Ont., concerning the movement of their plant to that city. They manufacture hay presses and other implements of the kind.

The new monthly stock list of the H. W. Petrie Machinery Co., Toronto, will be ready for distribution by May 7, and the firm will be pleased to forward a copy upon application to any readers of Hardware and Metal.

The Crawford Bay and St. Mary Railway Co. are seeking incorporation from the Dominion Government, with power to construct a line of railway from Crawford Bay on Lake Kootenay to Fort Steele. Those interested are: H. Roy, J. J. B. Goselin, J. B. T. Carson, all of Ottawa.

George Westinghouse, of the Westinghouse Machine Co., Pittsburg, has taken out a patent for a new vertical turbo-generator, in which the generator is placed directly on the shaft but above the turbine, the shaft being vertical. The type of turbo-generator manufactured by that firm at the present time is the horizontal.

The Corbet Foundry and Machine Company, Owen Sound, have commenced the installation of elevating machinery, shafting, hangers, fans and conveyers in the malting and brewing plant of the Eaton Bros. Brewing and Malting Co., Ltd., Owen Sound, who were burned out recently, the machinery being destroyed. It is expected that the work will be completed in about three weeks.

A transformer station is being constructed by the Toronto Railway Co. on Yonge street, north of Davenport road. This station is intended to receive the power from Niagara which, it is said, will be available in a few months. The cost of the building alone is $20,000, while it is probable that $50,000 will be expended on the plant. It will be finished by next Fall probably.

The Chicoutimi and North-Eastern Railway are seeking incorporation from the Dominion Government, granting them power to build a railway from Chicoutimi to Rigolet Inlet or Hamilton Inlet, or to the Gulf of St. Lawrence. Those interested are: Sir A. P. Caron, C. B. Powell, J. Edgeley, R. V. Sinclair, and J. A. Ellis, all of Ottawa; and J. H. Scott, M. J. Ray, B. A. Scott and E. J. Duggan, all of Quebec.

It has remained for a Canadian university to honor Mr. Edward Weston, a pioneer in electrical work and research, by granting him the degree of LL.D. At the convocation held at McGill University on Friday, April 29th, Mr. Weston had this degree conferred upon him for his many contributions to electrical science. In connection with the manufacture of electrical measuring instruments his name is a household word.

The Canadian Association of Stationary Engineers held a smoker and concert in Brantford, Ont., on May 12.

A new mower has been invented by G. D. and H. J. Johnston, Huntsville, Ont., which is pronounced by farmers who have tried it to be an excellent machine; it is particularly adapted for stumpy fields. The patents have been secured by Featherstonhaugh & Co., Toronto, and Greatrix & Co., Hamilton, Ont., are the machinists.

REMOVAL NOTICE

The McClary Mfg. Co. beg to advise the trade that on Monday next, May 9th, their **Toronto Branch** will occupy new offices and sample room on first floor at No. 42 Church St., immediately south of King St., Toronto. Warehouse accommodation has been secured at the Exhibition Grounds, where they have a large stock of goods, and are prepared to fill all orders promptly. A new warehouse will be erected at once, and by fall they will be in better shape than ever to look after the wants of their largely-growing business.

We take this opportunity of expressing our thanks for the kind and sympathetic letters we have received from our many friends, and which were too numerous to answer individually.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

AGENCY WANTED.

AN established Manufacturers' Agent in Montreal representing several large American houses, with representatives covering all Canadian territory, wishes to secure a good Canadian manufacturer's line in Hardware or Specialties. Address Box 102, HARDWARE AND METAL, Montreal. (20)

AN old established Toronto manufacturing and jobbing house, handling hardware specialties, wants selling agency for staple line sold by the trade; would purchase and carry large stock in Toronto, and carry book accounts; would purchase interest in manufacture; abundant capital and satisfactory references. Box 130 HARDWARE AND METAL, Toronto.

CANADIAN manufacturers desirous of being well represented in B.C., the Yukon and Alberta and open to exploit the oriental markets are invited to communicate. We know the territory. Have you the goods? HARDWARE, Box 367, Vancouver. (21)

FOR SALE.

TWO HARDWARE STOCKS in Manitoba; important implement agencies in connection; reason for selling, attention required to other lines; both good opportunities for money making; one stock will invoice about $5,500, other $2,500; good trade established and will bear investigation; write now. Marshall-Wells Company, Wholesale Hardware, Winnipeg, Man. (19)

SITUATION VACANT.

STOVE manufacturer wants young practical man with experience to assist superintendent. Address, Box 126, HARDWARE AND METAL, Toronto. (19)

WANTED—A boy with two or three years experience at tinsmith trade; please state wages and reference to C. B. Miner, Cobden, Ont. (19)

BUSINESS FOR SALE.

HARDWARE BUSINESS—About $4,000, in largest mining town in New Ontario. For particulars address Horne & Hardy, Copper Cliff. (24)

PLUMBING, tinsmithing and hardware business, established 1892. Everything must be sold at once. J. D. Murdoch & Co., Simcoe, Ont. (20)

SITUATIONS WANTED.

EXPERIENCED accountant with intimate knowledge of western business conditions desires position with hardware or other wholesale house. Address C. W. Playfair, 332 Notre Dame, Winnipeg. (19)

HARDWARE clerk wishes to obtain situation at once, either in Manitoba or the Territories; ten years' general experience, with best references. Address S. C. Wright, Milestone, Assa. (19)

SITUATION WANTED—As clerk in hardware store; five years' experience; good references. Address Box 127, HARDWARE AND METAL, Toronto. (19)

MACHINERY FOR SALE.

Special rates will be quoted for notices under this heading for periods of three months or longer.

THE FAIRBANKS CO.—Temporary warehouse, 124 Bay—standard scales, valves, trucks, letter presses, shafting, hangers, pulleys belting, mill supplies, machine tools; "Fairbanks" gas and gasoline engines; write for price list.

MACHINERY WANTED.

Notices under this heading inserted free for subscribers to HARDWARE AND METAL.

COFFEE MACHINERY—A manufacturing concern wants coffee roasting and grinding machinery. Address Box 129, HARDWARE AND METAL, Toronto.

TRADE OPENINGS IN NEW ZEALAND.

D. H. ROSS, Canadian Commercial Agent for Victoria and South Australia, in a recent report to the Department of Trade and Commerce draws attention to some openings for Canadian trade in New Zealand. In particular, he mentions a good opportunity to develop trade in sawmill machinery. He says that the manager of several large mills left in March for London, and from there will proceed to Canada, to secure improved machinery for his mills. He has been supplied with the names and addresses of several Canadian manufacturers, and will personally select his requirements. This machinery is to be erected in one of the principal lumber centres and will, no doubt, be a first-class advertisement for the makers.

Mr. Ross also states that a big trade in hot water and steam radiators and warm air furnaces might easily be developed. Hotels and office buildings are now very poorly heated and the public are interested in steam and hot water heating appliances, although their use is by no means general. The Victorian Winter extends from May until the end of September, and there is a good opportunity for energetic Canadian firms to educate the people in the use of modern heating appliances.

Canadian manufacturers and business men generally do not seem to be fully alive to the opportunities which the New Zealand and Australian markets present. It has been quite evident since the granting of the preference to Canada that New Zealand merchants are interested in what we have to offer. That interest has been manifested in various ways. One of the first indications was the largely increased circulation of this paper among New Zealand importers. Buyers in one country very naturally form their impressions of the business possibilities of another from what they see in the columns of its trade papers.

Our manufacturers should make a special effort to capture a good portion of the New Zealand import business. Sentiment is an important factor even in business, and with the growth of the Imperial spirit there is an evident willingness to give us the preference where possible. Since the granting of a tariff preference interest has become the ally of sentiment.

Machinery and hardware manufacturers should plan to get business in New Zealand. Mr. Ross suggests that they should send their catalogues to probable buyers. A list of these can easily be obtained in Australasian directories and hand books. Meanwhile manufacturers who are making announcements to the Canadian trade through Hardware and Metal have the satisfaction of knowing that our New Zealand readers are interested in what they have to say. There is business in New Zealand for Canadian manufacturers if only they will make the most of their advantages.

THE COST OF STEEL RAILS.

CANADIANS, in view of the probable construction of two, or even three, steel rail plants in the Dominion, will be considerably interested in the discussion in the United States press, as a result of a debate in the U. S. Senate, regarding the net cost of steel rails in some of the modern plants in the Pittsburg region.

It will be remembered that in 1899 Charles M. Schwab, then president of the Carnegie Steel Co., in a letter to Henry C. Frick and some associates whom Mr. Schwab desired to interest in an effort to secure the works, stated that "steel rails could be made at the Edgar Thompson plant, at Braddock, for $12 per ton, as against an estimate of net cost of $19 per ton to the English rail manufacturers, and added that rails could be sold at $16 at the mill here, which would net nearly as much as home business had been." What was then true of rails, he said, was equally true of other steel products, which meant that the Carnegie Steel Co. was going to control the steel business of the world.

Senator Aldrick, of Rhode Island, in a debate in the Senate, went so far as to ridicule as absurd Mr. Schwab's estimate, and some of the leading financial papers have come out bluntly with more definite information.

The Wall Street Journal, May 2, is authority for the following basis of calculation for the cost of rails:

COST OF TURNING ORE INTO IRON, PER TON.

Royalty to mine owner	$0.60
Cost of mining	.40
Freight to lake	.80
Lake freight	.75
Dock charge	.15
Freight to furnace	.90
Furnacing, including labor and coke, etc.	1.50
Total	$5.10

On the basis of 60 per cent. ore, it would take five tons to make three tons of pig iron, which would give a cost of $8.50 for pig. To convert this into rails would take not in excess of $4.00 per ton, and it could probably be done cheaper. This gives a cost of $12.50 per ton for rails.

The New York Evening Post, one of the most conservative and reliable journals in the United States, bears the weight and authority of its opinions in the same direction. It says:

There is no doubt that Mr. Schwab, in 1899, knew what he was talking about. Present conditions, so far as mill cost is concerned, differ very little from then, and rails can be produced for $13 to $14 per ton, if not for $12. One estimate on cost was put as low as $10. The Pennsylvania Steel Company and the Lackawanna Steel can probably make rails as cheaply as the Carnegie Steel Company. Sales to foreign railroads, made by the Pennsylvania Steel Company several months ago in competition with both the United States Steel Corporation and English and German manufacturers, showed this very clearly. Such sales were believed to have been on a basis of between $16 and $18 at the mill, as compared with $28, the present pool price for domestic orders.

These figures are interesting and should do much to assist Canadians in making up their minds as to the needs of Canadian iron and steel producers for tariff protection.

CANADA'S UNDERPAID JUDICIARY.

A STRIKING feature of the discussion regarding the salaries of the justices of the Canadian Supreme Court is the fact that no attempt to debate the question is made. Those who are convinced that a reasonable increase in the salaries should be paid do not hesitate to offer their arguments in favor of the advance, but those who are not ready to make the increase do not endeavor to discuss the matter on its merits. If they utter any views whatever they endeavor to draw a herring across the trail by a reference to the necessity of a re-arrangement of the salaries of all the judiciary or by a comparison of the salaries of the Dominion Ministers of the Crown with those of the Supreme Court judges or by the introduction of some other side issue.

It is hardly necessary to discuss these points—they cannot be termed arguments—further than to say though that Canada can well afford to pay, and should pay, more equitable salaries to its Prime Minister and to the Dominion Ministers of the Crown, and also to the judiciary generally. These questions are not relevant to the one at issue, the necessity of ensuring the future dignity and strength of the highest court in the Dominion by the payment of a salary large enough to permit the best equipped men to accept appointment to it.

* * *

A Montreal lawyer, whose name cannot be here inserted, but who, though a young man, is recognized as a man of brilliancy and power, in conversation with a couple of business men a day or so ago, expressed himself about as follows: "I suppose to some members of Parliament the present salaries of the Supreme Court judges are quite large enough. Yet it is the fact that I could not afford to take a seat on the Supreme Court bench. My practice, though a growing one, is not as big as that of many lawyers I could name. But it is large enough to make the sacrifice necessary to accept an appointment to the Supreme Court more than I would care to make."

In all probability if the proposed increase were made the difference would be sufficient to attract such men, whereas they could not to-day be secured. And it is such men that ensure the stability of our laws and the dignity of the Supreme Court.

* * *

Few men in Canada are in a better position to know the needs of the Dominion from a commercial man's point of view than Mr. F. W. Thompson, managing director of the Ogilvie Flour Mills Co., Limited. He stated to a representative of this paper that he was heartily in accord with the article written by Hardware and Metal on this subject. He believed the whole judiciary were underpaid to a criminal extent. This same principle applied to the Premier of the country, to the leader of the Opposition, and to all leaders of public offices of great trust. Their salaries should be commensurate with the responsibilities. Every man should be thoroughly independent, and by that he did not wish to imply that there were any men in the judiciary or the political leadership who had the slightest flaw upon their reputation or character. Both political parties should be in perfect unison on this matter. No prejudices should be allowed to step in to interfere with so serious and important a question. It was self-evident that the judges of Canada were more poorly paid than those of the other countries. The very opposite should be the case by reason of the increasing development of the country. He could not conceive of any fair minded man with any business qualifications who would offer to stand in the way, however sectional he might be in his ideas, to assist in applying immediate correction to this lamentable state of affairs. Salaries should be such as to encourage the bringing into public life the strongest and best men of the country. He complimented the MacLean papers upon the work they were doing and he felt sure that business men at all interested in this great country's development would be only too glad to hear of an advance in the salaries of the judiciary.

THE EVIL OF STRIKES.

With the advent of Spring and the quickening of trade and the increased activity on all sides, it is lamentable to see a revival of the striking instinct, coupled with its attendant evils. Just at a time more than any other, when employers and employes should be working hand in hand, striving for each others good, a rupture takes place, a strike, or a lock-out resulting in stagnation in that line.

In ordering a strike or a lock-out, there is a third party which forms the greater majority of those affected and whose interest is neither consulted nor taken into consideration. It is the consumer. He must bear the annoyance without expressing himself and wait calmly by and let matters take their course.

Unionism has done much to elevate the status of the workmen, and by its means they have received concessions otherwise unobtainable; but a union that is antagonistic to its employers, that seeks by fair means or foul to gain advantage, that assumes a dictatorship intolerant to all fair-minded people is a hindrance to our social advancement. Where firebrands or hot-heads rule, there can be little or no progress. Let a self-imposed walking delegate come along, championing the cause of the workman and he is listened to with feverish eagerness. His word means everything and his very suggestion is a command. "Why?" one may ask. It is only natural since he has, or pretends to have, their interest at heart. Let the workmen be educated to know that theirs and their employers' interests are one and the same. Let the employers take the same interest in the men as does the walking delegate. Let the two realize that the one is indispensable to the other. Let them get closer together and discuss matters in common. Let these things come to pass and our labor difficulties will no longer be what they too often are now, a source of bitterness and antagonism and disruption between employers and employes.

THE TOURIST TRADE.

IMPORTANT as is a merchant's regular business, and necessary as it is for him to cater carefully for regular customers, there is another side to his business which merits careful attention. This is the tourist trade, which in Canada is annually becoming a more and more important factor.

As a rule the tourist is a person of means and free with his or her money. He usually pays well for what he buys and buys without stint. He is not a person difficult to please or one who haggles and endeavors to beat down prices. He is, in fact, a first-rate customer.

Recognizing, therefore, the commercial value of the Summer visitor, it behooves every business man in communities where tourists come or can be induced to come, to use every means in his power to attract the tourist trade. At both extremes of Canada, viz., in British Columbia in the west, and in the Maritime Provinces in the east, tourist associations, backed by business men, are accomplishing excellent results, and in other parts of Canada such organizations are springing into being.

It would appear as if the municipal councils should undertake this work. It is their duty to promote the welfare of the communities they represent, and what more useful work could they accomplish than the bringing in of tourist business? Where municipal councils are apathetic, however, and, unfortunately, this seems to be a chronic condition with most of them, the business men should take up the task. In the Maritime Provinces we find the boards of trade active in this direction. The Kentville Board of Trade and the King's County Board may be instanced, while the St. John Board of Trade is at the back of the New Brunswick Tourist Association.

The course followed by these boards should be emulated by other boards throughout the country. If, as some would have it, boards of trade have served their purpose and are becoming defunct, let them revive on this new subject of the tourist trade.

AFTERMATH OF THE TORONTO FIRE.

MR. W. B. STEWART, representing the Consumers' Cordage Co., and the Hamilton Cotton Co., has opened offices at 11 Front street east, Toronto; telephone, Main 94.

The Dodge Mfg. Co., Toronto Junction, have issued the following announcement to the trade: "Although our Front street office has been destroyed in the recent fire, it will in no way interfere with out regular business. Our Toronto address is now 116 Bay street. Our very complete 'phone service, including private line to our works, has been re-installed, and we are doing business as usual. Our immense plant at Toronto Junction is running full, turning out 'Shafting,' 'Hangers,' 'Pulleys,' etc. Our capable men are always at your service. Our stocks are very complete."

The Toronto branch of the McClary Mfg. Co. will open next week temporary offices at 24 Church street, which together with their warehouse accommodation at the Exhibition grounds, will enable them to attend to the wants of their customers with their usual promptness and satisfaction until their own warehouse, which is to be rebuilt at once, is ready for occupation. The company have purchased a site just west of the Princess theatre, where they will build the new warehouse at once.

PIPE THAT IS PIPE.

Quality is always an important consideration in the purchase of iron pipe but never more so than under conditions like the present when prices are not as steady as usual. The merchant who sells iron pipe should be careful to insist on the best quality rather than on the cheapest line, for risk of losing reputation by selling inferior grades of iron pipe is too great to permit of carelessness in the matter. The Page-Hersey Iron & Tube Co., Guelph, Ont., make a pipe that can be depended on. Hardware dealers should write direct to this firm and read what they have to say about their pipe.

BOUGHT NEW FACTORY.

WIPED out in the recent conflagration, in which they lost their entire stock and machinery, E. W. Gillett Company, Toronto, have lost no time in securing more suitable premises in which to carry on their business.

The company on Friday last closed a deal for the purchase of the fine substantial factory of the Pure Gold Mfg. Co., built about two years ago, which stands on a lot at the corner of King and Duncan streets, with a frontage of 110 feet on King street and a depth of 186 feet on Duncan street. The building could not have been better adapted for the use of the Gillett Company had it been built under their own supervision. According to the terms of the agreement it is understood they will not take possession for a few months, thus giving the present tenants time to locate in a new factory, which it is understood they propose building in another part of Toronto. In the meantime, the Gillett Company have two temporary factories in full running order and are working day and night to fill orders which are pouring in on them. They are, however, able to keep the trade fairly well supplied with Royal Yeast and the other articles they manufacture, and thus tide over what looked to be a very serious crisis in their history.

TEN BUSY DAYS IN THE HISTORY OF E. W. GILLETT CO., LIMITED.

April 19th—Factory (32 and 34 Front street west), together with machinery and stock of goods, totally destroyed by fire at midnight.

April 20th—Opened offices at 15 Wellington street east and had them completely furnished and office staff at work at 1 p. m.

April 21st-22nd—Secured factory premises in two buildings.

April 23rd—Commenced fitting up factories and unloaded carload of material and machinery received by express from Chicago.

April 24th-25th—Installed machinery.

April 26th—Commenced shipping goods.

April 29th—Purchased fine factory building on King street west, now occupied by Pure Gold Co.

PERSONAL MENTION.

Mr. Walter Grose, of Montreal, was in Toronto this week.

Gies, Wolfhard & Co., Berlin, have dissolved partnership and are succeeded by H. Wolfhard & Co.

Mr. J. Hofmann, Canadian manager of sales for the American Axe and Tool Company, is in Quebec this week.

Mr. C. M. Audel, of the Fairbanks Co., is ill with diphtheria. His friends will be glad to know that the attack is not considered serious.

Mr. J. R. Kinghorne, the popular sales agent for the Montreal Rolling Mills Co., returned to business this week after an illness of several months.

Mr. H. J. Fuller, of the Fairbanks Co., Montreal, was in Toronto last week adjusting fire losses in connection with the company's Toronto warehouse, which was destroyed in the big fire.

Mr. E. Dowsley, of A. Ramsay & Son, Montreal, is leaving shortly for a trip to Great Britain. Mr. Dowsley's health has been poor for some months, and it is hoped that he will benefit by a complete rest from business.

Mr. W. B. Lawson, who for some time has been in charge of the shipping department of Caverhill, Learmont & Co., Montreal, was presented with a cabinet of cutlery on the occasion of his marriage to Miss G. Allo, of Montreal, a few days ago.

Mr. F. B. Moore, of Jones & Moore, electricians, Toronto, has been ill and consequently unable to be at his office for about a month. Mr. Jones has been looking after the business end of the firm as well as of the mechanical department in his absence.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, May 6, 1904.

Hardware.

WITH the opening of navigation has come a rush much greater than usual in business. The first boats both east and west have gone out and their departure sees a rush of orders from all sides. The wholesale people report a boom in business this week which partly compensates for the dullness of the previous few months. Business has picked up to a wonderful extent and probably the sudden transition from Winter to Summer has had a good deal to do with it. Collections are reported much better this week and much less difficulty has been experienced in that direction than recently.

Prices remain about the same as last week. Washing machines have advanced in price, both in the cheaper and better grades.

There is a big demand and many rush orders for rivets and burrs, and the same applies to bolts and nuts. The latter are in good supply at present although they were scarce last season. Wire nails are reported scarce, especially three inch.

Washing Machines—These have been advanced in price this week, the cheaper lines $1 per dozen and the best makes $2.00 per dozen. New quotations follow: Round (three legs) $35.00 per dozen; round (four legs), $39.00 per dozen; square (regular size), $42.00 per dozen; square (smaller size), $36.00 per dozen; round rotary, $56.00 per dozen; square rotary, $59.00 per dozen; "New Century," $72.00 per dozen.

Lawn Mowers—The Summer weather has caused an increased demand and shipments are being freely made. Prices are steady. We quote as follows: With 8-inch wheel, sizes 12, 14 and 16 inch, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18 $4.75; 20, $5.25 each.

Garden Hose—The demand increases rapidly owing, no doubt, to the Summer weather we are having. Prices are steady. Discounts continue: Trade 75 per cent.; Western, 65 and 10 per cent.; White, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; cotton, 60 per cent.

Hose Reels—The sales for these are also increasing. Prices are from 15c to 25 per cent higher than last year.

Ice Cream Freezers—There is a decided increase in business in this line and orders are coming in freely. We quote the following range of prices for the leading brands: One quart, $1.50 to $1.60 each; 2 quart, $1.70 to $1.80 each; 3 quart, $1.95 to $2.25 each; 4 quart, $2.35 to $2.60 each; 6 quart, $2.95 to $3.25 each; 8 quart, $3.70 to $4.10 each; 10 quart, $4.75 to $5.50 each; 12 quart, $5.75 to $6.50 each; 14 quart, $6.75 to $7.50 each.

Agricultural Wrenches — Market is lively. Discount as before, 25 per cent.

Harvest Tools—The discount on these is the same, 60 per cent.

Spring Hinges—Demand is lively. We quote: No. 5, $17.25 per gross; No. 10 $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Heavy Screw Hooks and Hinges—Prices remain the same as before, with a brisk demand We still quote: Sizes 12 inches and upwards are selling at $3.25 per 100 lbs; the price of the 6, 8 and 10-inch sizes is $4.25.

Wire Hat and Coat Hooks—There is no change this week. The price of the three-inch size is 75c a gross.

Churns—There is no improvement in the demand for these noted this week. Discounts 40 and 15 per cent. f.o.b. Montreal and 30 and 30 per cent. f.o.b. factory.

Poultry Netting — Trade continues good. Discounts for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-gauge, the discounts are 55 and 5 per cent.

Galvanized Poultry Netting Staples—An active demand. Prices are: Sizes 5-8, 3-4, 1 1-8, 10-lb boxes, $12.50 list; 25 and 50-lb boxes, $12.25 list; 100-lb boxes, $12 list. Less 57 1-2 per cent.

Bed Staples—The discount on the Montreal Rolling Mills Company's and the B. Greening Wire Company's lists is 57 1-2 per cent. The discounts on the Dominion Wire Company's list are 25 and 2 1-2 per cent.

Blind Staples—The discount is 40 per cent.

Galvanized Coil Spring Wire—Business remains the same, which is fairly active. Our quotations are as follows: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Carlots 5 cents less. Freight prepaid is less than carlots to extent of 25 cents and in carlots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—The market is as usual lately quiet but steady. Our quotations follow: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11 $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots 12 1-2c extra per 100 lbs will be charged.

Barbed Wire—Jobbers report a great many more rush orders from retailers who placed their orders with an independent American company, but who have not yet had them filled. The supply is none too great and considerable difficulty is experienced in filling orders. We quote: $2.75 per 100 lbs f.o.b. Montreal, and $2.50 f.o.b. Cleveland. Carlots of 15 tons $2.40 f.o.b. Cleveland.

Smooth Steel Wire—Business remains steady and prices continue the same. Bright and annealed, $2.50 per 100 lb f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extra Coppered wire, 60c; tinned wire. $2; tras per 100 lb are now as follows: oiling, 10c; spring wire, $1.25; best steel wire, 75c; bright soft-drawn, 15c; hay-baling wire, 20 to 25c.

Annealed Hay Wire—Annealed hay wire and annealed and oiled wire are still sold at usual list prices plus the usual extras.

Fine Steel Wire—Market continues quiet but steady. The discount is 25 per cent. with net extras as follows: 1 and 2-lb hanks, 25c per 100-lbs; 1-2-lb hanks, 37 1-2c; 1-4-lb hanks, 50c.

Brass Wire—There is nothing much doing in this line. Discount is 60 per cent.

Copper Wire—Market remains inactive. Discount is 60 per cent.

Rivets and Burrs—There is a brisk demand and many rush orders are reported. Prices continue the same. Discounts are: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—Although there was a scarcity last year the supply this season is ample for all demands. The demand is very brisk for all sizes. We quote discounts as follows: Carriage bolts common, ($1.00) list 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1) list,

7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes 4c per lb off; nuts, hexagon, all sizes, 4 1-4c per lb off.

Washers, 45 per cent. off.

Screws—The shortage in screws still continues while the demand is brisk. We quote discounts as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Wire Nails—Prices are steady. There is a scarcity in all sizes of wire nails this week owing to the unusual heavy demand for the early boats. Three-inch nails are particularly scarce. Trade has increased very much. We quote the following prices: $2.40 per keg carlots and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford and St. John.

Boxwood Rules—Discounts range from 52 1-2 to 50 per cent. off list.

Shot Guns—The market is completely demoralized owing to the cutting of prices by the American manufacturers.

Cordage—The market is steady and the demand brisk. We quote as follows: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; Russian tarred spunyarn, 13 1-2c; jute rope, 3-8-in in diameter and upwards, 9c; cotto nrope, 21c; cotton twine, 24c for 3 and 4 ply. Cotton bedcord, 90c to $1.70, according to length. Sash cord 30 to 31 1-2c; cotton candle wick, 22 to 24c.

Building Paper—Trade is quite active while prices remain steady. We quote as follows: Tarred felt, $1.85 per 100 lbs; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry sheathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c per roll.

Cement—Some German manufacturers have withdrawn their lower prices quoted to importers as the reduction was not sufficient to meet the surtax, and they could not afford to quote lower. There are several large shipments awaiting the four boats for the upper lakes. Several importations of Belgian cement are expected shortly. There is a brisk demand. Prices are steady at former quotations, which were: Canadian cement, $1.90 to $2.25; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel, ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—Scarce and in good demand. Ample supplies expected from Great Britain. English are selling at $16.00 to $22.00 per 1,000; Scotch, $17.00 to $22.00.

PLUMBING GOODS.

The opening of navigation has had a very stimulating effect on the trade in plumbing goods. The boats are now taking freight both ways, and local houses are rushing out some long delayed shipments. Britannic left on Thursday for Sydney and other points in the Maritime Provinces and the Cacouna left port for Charlottetown. The canals are now open and large shipments have been sent up the river. The week has consequently seen an almost unprecedented rush as the local houses have been holding goods for weeks for the first boats. Prices throughout are steady this week. Lead pipe and soil pipe and fittings are in good request. There is an average trade in other lines. The strike in Montreal has not seriously affected business.

Lead Pipe—There is a very active demand this week particularly from country points. The price is still 8c for composition waste and aqueduct and 7c for ordinary. The discount is 35 per cent. f.o.b. Montreal. Toronto, St. John, N. B., and Halifax. F.o.b. London—15c per 100 lbs extra. F.o.b. Hamilton—10c per 100 lbs extra.

Soil Pipe and Fittings—There is an active enquiry this week and business is brisk. Prices are now firmly maintained. Quotations are as follows: Light soil pipe, 3 to 6-in, 50 and 10 per cent.; medium and extra heavy soil pipe, 2 to 6-in. 60 per cent.; extra heavy soil pipe, 8-in, 45 per cent. Light fittings, 2 to 6-in, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in, 60 and 5 per cent.; extra heavy fittings 8-in, 45 per cent.

Iron Pipe and Fittings—There is an average business this week. We quote: Standard pipe, per 100 feet, in length under 19 feet—black, 1-8-in, $2.30; 1-4-in, $2.30; 3-8-in, $2.55; 1-2-in, $2.85; 3-4-in, $3.65; 1-in, $5.20; 1 1-4-in, $7.35; 1 1-2-in, $8.95; 2-in, $12.55. Galvanized—1-4-in, $3.20; 3-8-in, $3.45; 1-2-in, $3.90; 3-4-in, $5; 1-in. $7.20; 1 1-4in, $10.05; 1 1-2-in, $12.20; 2-in, $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.; and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in, $4.20; 3-4-in, $5.25; 1-in, $7.55; 1 1-4-in, $10.55; 1 1-2-in, $12.75; 2-in, $17.60. Galvanized—1-2-in, $5.25; 3-4-in, $6.65; 1-in, $9.55; 1 1-4-in, $13.25; 1 1-2-in, $16; 2-in, $21.90. The discount on all sizes of extra heavy pipe is 12-12 per cent. coupling 1-2 in. to 2 in., 55 per cent. discount; nipples, 1-4 and 3-8 in., 65 per cent discount and 1-2 in. to 6 in. 67 1-2 per cent. discount.

Solder—We quote 18c for bar and 18 1-2c for wire solder.

METALS.

Import business is expected to show a big improvement now that the river is open and ocean steamships are arriving in port. Some heavy shipments of metals are expected to arrive shortly. English prices for metals are very firm and in consequence local quotations are firmly maintained. One Montreal house have advanced quotations of Canada plates 10c per box but the others are maintaining the old prices. Bar iron is in good demand since the opening of navigation and complaints are heard in some quarters that certain sizes can not be obtained. The difficulty (if there is any) is due entirely to the big rush of business this week which is more than can be conveniently handled. Supplies will be sufficient next week. Import business in pig iron is showing more life but current buying is in small lots for immediate requirements. Canadian iron is selling fairly well but same remarks apply. No very large sales have been made. Former quotations still hold for copper and tin but these are subject to almost daily fluctuations. Pig lead is weaker.

Pig Iron—Import orders show an increase this week and there has been an increase also in Canadian business. In the main orders have been for present requirements only. Londonderry iron is now being delivered in Montreal and the Maritime Provinces. The Dominion Iron and Steel Company advise us as follows: "Prices for the past week on pig iron have remained about stationery. Orders received here have aggregated a fair tonnage. The notable feature in the week has been the large specifications received on contracts already booked, and in all cases early shipment is urged:

"Disc," No. 1	$17.50	delivered	Montreal
"Dom.," No. 1	13.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18.00	delivered	Montreal.
" No. 2	17.50	"	"
" No. 3	16 50	"	"
" No. 4	16.00	"	"
Londonderry	$18.50 to $19.00	delivered	Montreal.
Summerlee	20.25 to 20.75	"	"
Glengarnock	20.25 to 20.75	"	"
Gartsherrie	20.00	"	"
Cambroe	18.50	"	"
Middlesboro No. 1	16.50	"	"
" No. 2	15.50	"	"

Bar Iron—There is an active demand this week for shipment by boat. Complaint is heard in some quarters of a shortage in some sizes, but if there is any it is no doubt due to the unprecedented rush of business this week. Prices are firm and an advance would excite no surprise as local quotations have been abnormally low for some time. We quote: $1.75 for merchants' bar; horse shoe iron, $2.00; forged iron, $1.95.

Black Sheets—English prices continue very firm and the local market is strong in sympathy. Quotations are as follows: 28-gauge, $2.35; 26-gauge, $2.30; 22 to 24-gauge, $2.25; 19 to 20-gauge, $2.30, and 8 to 10-gauge, $2.40.

Steel—Prices for steel are about stationary. Business is showing a considerable improvement. We quote as follows: Sleighshoe, $1.90; tire, $1.95 to $2.10; spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—There is not much doing this week. Prices are steady. We quote: Black Diamond, 8 to 9c; Sanderson's, 8 to 9c, according to the grade; Jessop's, 13c; Jonas & Colver's, 10 to 20c; "Air Hardening," 65c per lb; Conqueror, 7 1-4c.

Sheet Zinc—Zinc is scarce this week and in consequence the market is very firm. On cask lots the price is $6.15 to $6.25 and for smaller quantities it is $6.50. These prices are well maintained.

Galvanized Iron—The market is firm and active. Quotations as follows: 28-gauge, Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz, $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c extra.

Tinplates—The local market is very firm in sympathy with primary markets. Cokes are selling at $3.75 and charcoals at $4.00.

Terne Plates—The price is unchanged and the market is firmer than last week. We quote: $6.75.

Canada Plates—As noted above, prices are very firm in sympathy with a strong English market. One Montreal house are quoting an advance of 10c per box this week, but with other houses prices are as before. Quotations are as follows: 52s, $2.30; 60s, $2.30; 75s, $2.40; full polished, $3.60 and galvanized $4 to $4.10; galvanized 60s, $4.25 to $4.35.

Ingot Tin—Prices are as before, although subject to daily fluctuations. Our quotations of 32 to 32 1-2c still applies.

Ingot Copper—We quote 13 3-4 to 14c per lb.

Pig Lead—The market is weaker and quotations are now $3.35 to $3.45.

Antimony—Cookson's is quoted at 7 3-4 to 8c.

Coil Chain—Nothing new. Quotations are: No. 6. 10c; No. 5, 9c; No. 4, 8 1-2c; No. 3, 7c; 1-4-in, $6.10; 5-16-in, $4.70; 3-8-in, $4; 7-16-in, $3.80; 1-2-in, $3.70; 9-16-in, $3.55; 5-8-in, $3.35; 3-4-in, $3.30; 7-8-in, $3.25; and 1-in, $3.20 with 10c allowance on carlots.

Zinc Spelter—Very scarce this week. The price is 6c.

Scrap Metals—Scrap copper continues very cheap as compared with the price of ingot copper. Quotations are: Heavy copper and wire, 11 to 11 1-2c per lb; light copper, 10 1-2c; heavy red brass, 10 to 10 1-4c; heavy yellow brass, 8 1-2c; light brass, 5 1-2c; lead, 2 3-4c; zinc, 2 3-4 to 3c; iron, No. 1 wrought, $10 to $12; machinery scrap, $15 to $16; stove plate, $12; mixed country rags, 65 to 75c per 100 lbs; old rubbers, 5 1-2 to 6c per lb.

Toronto, May 6, 1904

Hardware.

AN improvement all along the line is reported this week. The opening of navigation and the change to warm weather have combined to cause an active movement in all seasonable lines, notably spades and shovels, wire and fencing, screen doors, nails, screws, rivets and burrs, bolts and nuts, refrigerators, ice cream freezers, building materials of all kinds, woodenware, paints, etc. Prices throughout are steady, the only change being an advance in washers.

Washing Machines—An advance of $2 per dozen has been made in both round and square washing machines. The quotations now are: Round, reacting washer, per doz., $56; square, reacting washer, per doz., $59; Eclipse, $48; Dowswell, $36; New Century, $72.

Oil Stove Wick—Prices are steady since the advance of about 10 per cent. last week.

Steel Track Door Hangers—Prices are steady since the reduction, with a fair trade doing. We quote as follows: Steel track, 1x3-16 inches, $3.75; 1 1-4x3-16 inches, $4.75. At least one house is, however, quoting as low as $3.50 for 1-inch hangers.

Chain—There is a good trade at steady prices. Prices are still as follows: 1-4-inch, $5.60; 5-16-inch, $4.45; 3-8-inch, $3.85; 7-16-inch, $3.70; 1-2-inch, $3.55; 9-16-inch, $3.45; 5-8-inch, $3.35; 3-4-inch, $3.25.

Step Ladders—There is a good demand for pine ladders on this market at 10c per foot for 3 to 6 feet, and 11c per foot for 7 to 10 feet ladders.

Lawn Mowers—Business in this line continues to improve. Prices keep as follows: Woodyatt, 10 1-2 inch wheel, $8.50; Star, 9 inch, $7; Daisy, 8 inch, $5.75; Philadelphia, 7 1-2 inch, $7; Ontario, 7 1-2 inch, $15.80; King Edward, 12 inch, $9.50 (14-inch cut in aboce). D. Maxwell & Sons, 10 1-2 inch, $7.50 to $10; 9 inch, $5.50 to $6.25; 8 inch, $4.90 to $5.50. Discount 50 per cent.

Screen Doors—The demand continues to expand. There is no change in prices which are as follows: Common, two or three panel, walnut, 4 inch, $6.50; yellow and green stained, $6.75; in natural colors oil finish, $8.75, with 20c less for 3-inch style.

Screen Wire Cloth—Orders are practically all in. Prices steady at $1.50 per 100 square feet.

Spring Hinges—An improved trade is reported with prices steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Barb Wire—There is a big movement. Our quotations are steady as follows, $2.75 per 100 lbs, f.o.b. Toronto

and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $240 f.o.b. Cleveland.

Galvanized Wire—A fair trade is doing, prices are firm as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c per 100 lbs extra charged.

Coiled Spring Wire—An excellent demand continues. The market is steady. Our quotations are as follows: No. 9, $2.70 per 100 lbs, freights equalized with factory points at Montreal, Hamilton, London, Welland or Walkerville and allowance to other points up to 25c; carlots, $2.65, freight allowance to 20c.

Wire Nails—Business continues to improve. Quotations are: $2.45 per keg f.o.b. Toronto, with carlots $2.40.

Cut Nails—There is a fair trade, with prices steady at $2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—Business continues dull. Prices unchanged as follows. Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2, and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c less.

Horsenails—**There is more activity** this week. Prices are steady. We still quote discounts as follows: "C" brand, 40, 10 and 7 1-2 per cent.; other brands 55 and 57 1-2 per cent.

Screws—A good movement in this line is recorded. Prices are steady. We quote: Flat head bright, 87 1-2 per cent. discount; round head bright, 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—Business is more active in all sizes. Prices are firm. We quote as follows: Iron rivets, 60 and 10 per cent. discounts; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—A large volume of business is reported. We again quote: Carriage bolts, common ($1 list), 3-16 and 1-4-inch, 60 per cent.; 5-16 and 3-8-inch, 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—Business in binder twine shows some improvement. Prices are firm. Our quotations are as follows: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c;

"LONDON" HIGH-GRADE COILED SPRING WIRE

Has a perfect coil or spiral not a kink. It is made from a special wire containing a high percentage of carbon, which we get from the American Steel and Wire Co.'s Mills at Cleveland. This wire is not equalled by the product of any other concern either in tensile strength or in the galvanizing.

London Coiled Wire in No. 12 Gauge is at least 25 per cent. stronger than tha t sold by our competitors. A test will prove the correctness of our assertion.

We have hundreds of tons in all sizes and kinds in stock, and can ship you 500 lbs. or five cars within 24 hours after receiving order.

If you want prompt shipment send us your orders for Coiled, Plain, Barb or Staples; also Steel Gates in all sizes.

The London Fence Machine Co.,
LONDON, ONTARIO. CLEVELAND, OHIO.

single lathyarn, 10 1-2c; double shingleyarn, 11c; single shingleyarn, 10 1-2c; sashcord 'Hercules,' 32 to 35c; 'Star,' 36 to 38c; cotton rope, 3-16-inch and up, 20 1-2 to 22c; 5 32-inch, 25 to 27c; 1-8-inch, 25 to 28c; cotton twine, 3-ply 25 to 28c; 4-ply 32 to 34c; calking cotton, 16 1-2 to 17c; cotton waste, colored, 6 3-4c; white, 11 to 13c.

Building Paper—Business never was better and prices are at following quotations: Tarred felt, $1.85 per 100 lbs; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry seathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c per roll.

Firebricks—With the ushering in of fine weather we find trade in fire brick getting busy. Prices remain unchanged from last week. We quote: English and Scotch at 28 to 35c.

Cement—The market is brisk and dealers are in a good position now to fill orders promptly. Prices are firm as below: Canadian Portland, $1.90 to $2.25; American Portland, $2 to $2.10 f.o.b. Toronto.

PLUMBING GOODS.

Business still shows the improvement noted last week. In lead pipe and soil pipe fittings there is a fairly good trade. Copper range boilers and enanealed ware are steady. The feature of the week is the falling through of the agreement among dealers as to the prices of iron pipe and iron pipe fittings. As a result of this there is considerable cutting in prices, and business in these lines is very lively. The prices on these lines we quote this week are only nominal, since it is quite evident that there will be considerable variation among the different firms from time to time, cutting being the order of the day.

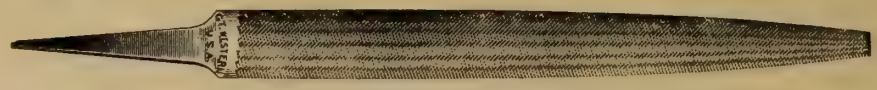
Lead Pipe—Prices are steady, and there is a bright feeling in the market We quote: Lead, 7c; lead waste pipe, 8c; discount 35 per cent.

Soil Pipe and Fittings—Prices remain unchanged, while there is a good amount of trade being done. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-inch pipe 40 and 5 per cent.

Iron Pipe Fittings—A brisk trade is being done, with considerable price-cutting. We quote nominally: Malleable fittings, 20 per cent.; cast iron (standard), 57 1-2 per cent.; headers, 52 1-2 per cent.; flanged unions, 60 per cent.; malleable bushings and plugs, 57 1-2 per cent.; nipples up to 6-inch inclusive, 67 1-2 per cent.

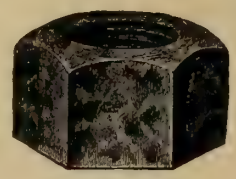
Copper Range Boilers—A fair, steady trade is being done since the new prices were issued. Discounts at 15 per cent. continue.

NICHOLSON FILE COMPANY



HIGH-GRADE FILES and RASPS

Largest File Manufacturers in the World. Seven Distinct Factories.
(FILES, all shapes, all sizes for all purposes.) For sale by the trade generally throughout the Dominion.
Walter Grose, Montreal, Selling Agent. DOMINION WORKS, PORT HOPE, ONT.



THE JOHN MORROW MACHINE SCREW COMPANY, Limited
Manufacturers of
Set and Cap Screws, Special Milled Work, Engine Studs, Etc. Cold Punched Nuts of every variety of finish.
INGERSOLL, ONT.

RETURNED NOV 14 1904

Iron Pipe—Prices are being cut by dealers, and a considerable amount of business is being done. We quote nominally f. o. b. Toronto: Black pipe 1-8-inch, $3.25; 1-4-inch $2.07; 3-8-inch, $2.25; 1-2-inch, $2.50; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.85; 2-inch, $11.05; 2 1-2-inch, $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25. Galvanized pipe, 1-4-inch, $2.88; 3-8-inch, $3.11; 1-2-inch, $3.42; 3-4-inch, $4.40; 1-inch, $6.35; 1 1-4-inch, $8.80; 1 1-2-inch, $10.75; 2-inch, $14.80.

Enameled Ware—The second quality of "Standard" has dropped in price from $17.85 to $16.35. There is a good trade being done. We quote: "Standard" 5 1-2 feet rolled rim, first quality, at $21.60; second quality, $16.35.

METALS.

The disruption of the ore association in the United States is the most disquieting feature of the situation this week. It is generally believed that this will result sooner or later in lower prices in the United States. This would certainly have a depressing effect on this market, as there is now competition on this market by United States iron and steel, and if this were to be materially increased the market here would at once weaken. There is practically no change in sheet metals. A fairly good business is doing in practically all lines.

Pig Iron—The news to hand of a weaker tone in the United States iron market has had a depressing effect on the situation here. United States iron has been for some time offered on this market at prices below the ruling quotations in the States. It is believed that a slump in that market will hardly result in lower quotations for United States iron in Canada but that the offerings may be increased somewhat. Canadian quotations show no change

though buyers have been holding off for some time.

Middlesboro, f.o.b., Toronto	....	$19 50
Hamilton, No. 1 "	$18 50 to	19 00
" No. 2 "	18 00 to	18 50
Midland, No. 1 "	18 50 to	19 00
" No. 2 "	18 00 to	18 50
" No. 1 f.o.b. Midland	17 00 to	17 50
Radnor, f.o.b. furnaces	....	30 00
Londonderry, f.o.b. furnaces	17 50 to	18 00

Bar Iron—The market maintains a steady tone, with a large business doing: Our prices are as follows: $1.80 f.o.b. Toronto. For extras as cut to length while rolling, 2 feet and over, 10c per 100 lb; 1 foot and under 2 feet, 15c; under 1 foot, 20c; over 20 feet by special agreement according to length and size.

Steel—The market for ordinary grades is weak, but there is a good trade in high-speed tool steels. Prices show no change, being as follows: Jessop's high speed, 60c; Jessop's "Standard" tool, 14c; "Chas. Leonard," 8 to 9c; Jessop's best crucible sheet steel, 14c; Crucible Steel Co.'s "Black Diamond," 10 to 11c; "Silver," 13c; "Special," 17c; "Rex" high speed, 65 to 75c; "Self Hardening," 45 to 50c; Morton's tool steel, 14c.

Black Sheets—The market is quiet, with prices firm.

Canada Plates—There is a stronger demand. No changes are reported in prices. We quote as below: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—Outside markets are steadier. A good demand is noted. Quotations locally are firm but unchanged at 30 to 30 1-2c.

Galvanized sheets—An improvement in the demand for this line is recorded. Quotations are as follows: Queen's Head, $4.25 for 28 gauge; American, $4 for 28 gauge; Bell brand, $4.25 for 28 guage; Gordon Crown, $4.25 for 28 gauge.

Tinplates—There is an active trade, with prices firm. We quote: Coke plates, bright, 14x20, $3.50; charcoal plates, $4.25.

Copper—A fair business in both ingot and sheet. Prices are steady. We quote; Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—There is no change. We quote $3.30 per 100 lbs for pig lead and $3.65 for bar lead.

Zinc Spelter—A fair demand at 6 to 6 1-2c per lb.

Zinc Sheets—Stocks light. We quote: Cask lots, $6.70 to $7, and part casks $7 to $7.25.

Solder—Good trade doing. Prices are unchanged. We quote: Guaranteed half-and-half at 18c, and wiping 17c.

Antimony—8c per lb.

Old Material—The market is dull this week; especially is this so in iron, which is even lower than it was last week. Machinery cast scrap is $1 lower than last week, while rubbers have dropped 1-2 to 1c per lb. Country mixed rags have advanced 15c per 100 lbs. We quote: Heavy copper and wire, 10 1-4c per pound; light copper, 9 1-4c per pound; heavy red brass, 9 1-4c per lb; heavy yellow brass, 8 to 9c per lb; light brass 5 to 5 1-2c per lb; lead, $2.50 per cwt; scrap zinc, 3c per lb; iron, No. 1 wrought, $10; No. 2 wrought, $3; machinery cast scrap, $13; stoveplate, $10; malleable and steel, $4; old rubbers, 5c per lb; country mixed rags, 65c per 100 lbs.

PETROLEUM.

There are no changes to note this week. Trade is active and prices firm. Our quotations are: Canadian prime white, 19c; Canadian water white, 20 1-2c; American prime white, 19 1-2c; American water white, 31 1-2c; ex-warehouse.

ATTRACTIVE TOURIST GUIDE.

Each recurring holiday season the New Brunswick Tourist Association surpasses itself in the beauty of its publications. This year this enterprising organization has issued a guide book to St. John and New Brunswick in a striking deep blue cover, the contents of which are extremely attractive. The illustrations have been well chosen and well reproduced and afford glimpses of most alluring scenery both by sea and land. The text supplies valuable information relative to the various resorts.

PROMPT PAYMENT.

The Liverpool & London & Globe Insurance Company have already settled and paid several of their losses and they are pursuing the same practice as they have been accustomed to in similar large conflagrations, notably at Chicago and Baltimore, viz., paying all claims without discount immediately the loss is adjusted and the papers filed. Messrs. Jos. B. Reed & Sons are the Toronto general agents of this company.

BUSINESS CONDITIONS IN BRITISH COLUMBIA.

From the Special Correspondent of HARDWARE AND METAL

Vancouver, B. C., April 30.

AFTER having become almost desperate in their efforts to secure from the Canadian Pacific Railway Co. concessions which would give Nelson a chance to build up business as a distributing point, the business men have been successful in securing recognition of their claims. It was with a great degree of satisfaction that they this week received from Mr. F. W. Peters, assistant general traffic manager of the C. P. R., a notification that Nelson had been made a distributing point for the Kootenays. The wholesalers had been agitating a long time for this arrangement, and when Mr. Peters was in the Kootenays a few weeks ago the matter was discussed with him very thoroughly. Nothing more was heard from him and the Nelson people naturally supposed that the usual fate had attended their efforts. It was only last week, therefore, that a strong resolution was adopted by the Nelson business men to write to the Railway Commission, and inquire when they would be in Winnipeg, and also to ask if they would receive a deputation from Nelson business men regarding what they felt was a discrimination against their city in the matter of freight rates.

According to the advices received from Mr. Peters, it now appears that that gentleman had to communicate with the Great Northern Railway Co. and obtain their consent under the traffic agreement between the two roads, to change the existing schedule of freight rates. Mr. Peters had to make a special trip to St. Paul in connection with the matter. Great credit is given by the Nelson wholesale men to Mr. Harry E. Macdonell, general freight agent for the C. P. R. in the Kootenays, for his efforts in aid of the movement to secure freight rate concessions. The people of Nelson hope to make their city the distributing point for the whole of the Kootenays, both east and west, and to largely increase the wholesale interests of the city.

* * *

Indicating the very rapid development of the movement on the part of eastern wholesale houses, which have branches established here, to become permanently fixed, may be noted that the Gurney Foundry Co., which a year or two ago opened a wholesale warehouse, is now negotiating for a site on which to erect a big warehouse for permanent quarters. A very fine location, in a central part of the city, has been chosen and the deal only awaits the receipt of the official sanction of the head office. The deal will include another large firm, the Gault Bros. Co., which has a large branch established in this city for some years. Hitherto they have been renting warehouse quarters, but if this deal goes through the Vancouver branch will be located in a permanent warehouse.

* * *

McLachlan Bros., hardware merchants of Nelson, propose opening in the same line in Vancouver also. The intention is that Mr. D. J. McLachlan will remove to Vancouver and manage the new branch, while the Nelson business will remain in the charge of Mr. D. S. McLachlan. At present Mr. D. J. McLachlan, accompanied by Mrs. McLachlan, is in the South on an extended holiday tour. When he returns the Vancouver business will be established.

* * *

The Victoria Colonist says that there are rumors afloat of a scheme to establish a large iron shipbuilding yard at that city. It is further asserted that eastern capital is being interested in the scheme. Some of the advantages pointed out in favor of such a scheme, are that the immense coal deposits of Vancouver Island are easily mined and close to the seaboard for transportation. The iron ore deposits of the northern part of the island are also conveniently situated for development, thus the material for iron vessels can be produced from the natural resources of the island. The revival of the plans of the late Homer H. Swaney, for the establishment of a smelter on a large scale to handle the iron ore deposits of Vancouver Island and other islands nearby, is said to have some connection with the shipbuilding proposal. As yet nothing definite can be learned, but the fact that nothing is yet done proves nothing. There is every condition favorable for the establishment of a big iron manufacturing industry and the building of iron ships will be but a corollary of the other proposition. Some day the big opportunities of the coast will be taken advantage of by men with the capital to handle them on a large scale.

* * *

Revelstoke is to have a brick making industry added to the various other commercial interests already centering in that city. Messrs. Kernaghan and Taylor are putting in a modern plant at large cost, which will make bricks entirely by machinery process.

* * *

Messrs. Lemon, Gonnason & Co., Victoria, are largely increasing their sash and door factory and planing mill. A sawmill and a new wharf are being added. The cost of the entire additions will exceed $20,000.

* * *

The statement is made from Ottawa that the plans for the new Federal public buildings for Vancouver will be completed shortly and that work on construction is to commence at an early date. The new building is to be on a commanding site overlooking the C. P. R. depot and the whole harbor front. No contract has yet been let for the work.

* * *

Capt. Jas. McAllister, formerly superintendent of the Canadian Pacific Railway Co.'s fleet of steamers on the lakes, and also master of the steamer Alberta, one of that fleet, is to be superintendent of the North Vancouver Power Co.'s new ferry service. He will likely command the new ferry steamer now being erected at Wallace's shipyard. The steel frame and hull were erected and shipped west by the Polson Iron Works, of Toronto. Capt. McAllister and Mrs. McAllister arrived from Owen Sound this week.

* * *

At the invitation of the Calgary Board of Trade, a convention of Boards of Trade of the Northwest Territories and of Eastern British Columbia is to be held on May 15 and 16. Calgary is to be the place of meeting and the promoters of the convention hope to have Premier Haultain, of the N. W. T., and Second Vice-President Whyte, of the C. P. R., as guests of the convention.

The idea in general is to promote trade relations among the business concerns of the west. There is at present a large amount of trade in various lines which is not kept within the Dominion. There are many ways in which the prairie districts and the Province of British Columbia can profitably by interchange increase their trade and keep it within the borders of the country for its up-building. The mining towns of the interior of the Province of British Columbia are necessarily dependent on outside sources for their supplies of produce and the natural supply market is found in the Northwest. On the other hand the fruit growing areas of British Columbia can supply the demands of the Northwest in that line. In many ways it is hoped to advance the interests of trade. Each board of trade or chamber of commerce is to send two delegates. Fully 100 delegates are expected to attend.

* * *

A proposal to build a railway line up the centre of Vancouver Island is engaging a great deal of attention in Victoria at the present time. Should such a scheme carry it would result in the development of the interior of the island on a scale not yet thought of. Vancouver Island is over 200 miles in length, and the transportation facilities are practically confined to the waters of the gulf and of the Pacific Ocean. The E. & N. Railway, which connects Victoria with Nanaimo, merely serves a little section, which is also easily reached from the coast. No attempt has ever yet been made to bring the interior of the island under actual development and settlement.

Connected with this new railway project, which would also be a section of the projected line, is a proposal to get a closer railway connection to the north, so that the sea voyage to Skagway shall not be so long. J. W. Cain and W. W. Belvin, of the Port Angeles Southern Railway, are promoting the Island Railway scheme. Port Angeles is a harbor in the State of Washington on the Straits of Juan de Fuca, nearly opposite Victoria, and but a few miles away. The Port Angeles Southern will be built to connect with the U. S. transcontinental roads and a ferry would carry trains across the strait and start them to the northern extremity of Vancouver Island from Victoria. As the one dream and hope of Victoria has long been for a railway connection direct, the likelihood is that the present proposal will receive a great deal of encouragement.

* * *

Snow blockades in the interior having become a thing of the past, the mines are resuming regular shipments. The LeRoi in Rossland camp has hardly yet got down to full shipping basis but is going on with regular work. Other mines in the Rossland camp are also shipping regularly. In the Boundary District there is not much new to note as shipments are regular, not having

been affected by snow and other difficulties which interfered with those further north in the Kootenays.

* * *

Talking of the new Alsek District near White Horse, Mr. J. T. Hillis, a well-known gentleman resident in Vancouver, and who has just returned from the north, says there are 1200 men in the district already. He intends returning in about two months, and says he fully expects to see twice that many there by that time. As Mr. Hillis is a practical mining man and has spent the last two months in the district looking over the ground, he is in a position to speak pretty accurately of the conditions and prospects of the new section. He says that the diggings are essentially for Summer work. The great quantity of water on bedrock is a difficulty to be obviated by digging drains, and the work of getting in supplies and preparing lumber for sluice boxes is just what can be expected in a new camp. When the work is carried on for a couple of months effectively this Summer, he expects to see some startling results. He has no doubt of the existence of rich gravel in the creeks of the district. The discoverers of Bullion Creek, the first find in the district, are getting in good shape for development and expect to take out fully $100,000 from their claims this season.

BRITISH IRON AND STEEL MARKETS.

Iron & Steel Trades Journal, April 23, 1904.

BIRMINGHAM report—The market to-day upheld the improved condition of business which was experienced at the quarterly meeting a week ago. Manufacturers of finished materials and producers of raw iron made it known that they had acquired a great deal of work. On the other hand, buyers could not in all cases muster up their courage to recognize that things were better. Nor could some be persuaded that prices may during the quarter run further against them. However, one feature was that everybody was in a better frame of mind, and there were unmistakable signs that the coming quarter will yield a more substantial volume of business than has been recorded lately. Some of the pig-iron makers have done a very substantial business since the quarterly meeting; indeed, they stated that they had sold more iron the last fortnight than in the whole of the previous three months, and contracts are held which will clear the output to the end of June. Some makers could do with another furnace being blown in, but will not do so until prices become higher.

Wolverhampton report — This week there is a healthier tone prevailing in the iron trade, and the prospects of business appear to have improved on the week. The demand gives fresh signs of life, and selling prices are firmer. * * * In the district trades a great deal of common bar iron has been ordered, and following the advance of prices last week, some people have rushed orders in with a request that the former rates only should be paid. However, these are not all agreed to, though where the offers have been hanging fire the difference in value has been split between sellers and buyer. The black sheet makers have had some fairly good orders from galvanisers, who have booked further lines from the South American markets, and also from Canada. The people trading with India and Australia are doing an average business. For stamping sheets there is rather more demand, by reason of the season business in stamped articles being more active, and the consumers have to give more for the sheets they might have bought a month ago. * * * The pig-iron makers in the district find on going over the contracts taken from quarter-day offers that they make up a very respectable aggregate, and sufficient to cover the output to the end of June. This justifies them requiring better figures for the next sales.

Glasgow report—On the whole the industrial position in the West of Scotland continues comparatively satisfactory, but there is no rush, and employment cannot be said to be more than steady. The future is still somewhat uncertain. Some life, however, has been infused into the position by the action of speculative operators on the pig-iron warrant market this week. For some time past dealers on the bull tack, although considerably in the minority, have been forecasting much higher prices for warrants, and further large withdrawals from store at Middlesbrough have assisted them materially in their operations. The iron which is coming aut of store is evidently for shipment abroad, for the Scotch demand has not yet increased, owing mainly to the slackness of pipe-founding firms. It is claimed, however, that this makes the position all the more significant. The total stock of iron in public stores throughout the kingdom is down to about 117,000—the lowest quantity on record for many years. American advices have also been of a sufficiently favorable character to dispel the hope of the bears that any relief might come to them in the shape of imports from the other side, and further shipments of Canadian iron continue in abeyance.

PITTSBURG METAL MARKET.

From The Iron Trade Review, May 5, 1904.

THE decision of the merchant producers of Lake Superior ore to maintain no association this year and no agreement as to price or output, while contrary to the expectations encouraged by many recent expressions from high sources, was not surprising to those who have been advised of the sentiment of the merchant firms. This action is not so significant as it would have been two months ago, as in the meantime term contracts involving considerable amounts of ore have been negotiated leaving not more than 3,000,000 tons that will require to be bought in the open market this year. The prices of 1904 ore, under these new term contracts are somewhat lower than the $3.50 base tentatively referred to in the resolution of the merchant ore men adopted in their separate meeting at New York two weeks ago. Standard Mesabi Bessemers are understood to have gone at about $3. These contracts are on a sliding scale based on the pig iron market. More of them are likely to be made, so that the necessity of an association agreement promises to grow steadily lsss, though the ore men expect to keep up their organization for statistical purposes. Ore for 1904 is not expected to come down before June 1, but furnaces in most cases are well supplied, many of them for weeks beyond that date. The lake labor situation is threatening, wage advances on a declining market naturally meeting determined resistance.

Pig Iron.—The market continues inactive and lower prices are being quoted. Bessemer iron is nominally $13 at the furnace, but this price could be shaded on a desirable tonnage. Foundry No. 2 has been quoted at $13.60 to $13.85 Pittsburg, these lower prices being due almost entirely to the offerings of foundry iron on the part of furnaces that have been producing steel-making irons in the past two months. With few exceptions the Valley furnaces have little tonnage on their books for May and June delivery, and unless there is a great improvement this month furnaces will be banked and blown out in June. Southern sellers are out of this market entirely, as they are unable to meet the low prices that are being named by Northern furnaces. This week the Pittsburg Stock Exchange decided to list pig iron warrants, and they will be traded in as soon as the rules to govern the transactions are adopted. The additional furnace capacity which the steel corporation secures by the purchase of the Clairton properties will not help out materially where the pig iron shortage was most acute during the past two months, namely, New Castle, Youngstown, Cleveland and Lorain. The pig iron production in this district has been ample in the past, and it is probable that the surplus production from Clairton will be shipped to the Valleys. We revise quotations as follows:

Bessemer, Valley	$13 00
Bessemer, Pittsburg	13 85
No. 1 Foundry	14 15 to $14 35
No. 2 Foundry	13 60 to 13 85
Gray forge, Pittsburg	13 00 to 13 25
Chilled basic, Valley	13 00
Chilled basic, Pittsburg	13 85

Bars.—While new business continues light, specificatons on contracts are heavy and the mills are operating in full. There is practically no demand for bar iron, and the weakness in other markets is not reflected here for this reason. We quote as follows ; Bar iron, 1.40 to 1.45c. Pittsburg, for local delivery, while for Western shipment quotations are based on 1.35c. Pittsburg.

Wire and Wire Nails.—The market continues unchanged. Current demand is not heavy, but specifications on contracts continue heavy and there is a pressure on the mills for shipments. We make the following quotations : Wire nails, carload lots to jobbers, f.o.b. cars Pittsburg, are quoted $1.90 base ; plain wire, carload lots, $1.80 base ; barb wire, carload lots, $2.20 base ; staples, carload lots, $2.05 keg. Galvanized, 30 cents extra. Carload lots to retailers are held at 5 cents advance in all lines, and on less

than carload lots a further advance of 10 cents is charged.

Steel.—Concessions on billets are now being made in this district and from 50 to 75 cents a ton better than agreed quotations can be done on both Bessemer and open-hearth. None of the large steel interests are reported shading prices, but the smaller concerns not parties to the agreement are quoting so as to take the small amount of business that is being offered. Agreed prices are as follows : Bessemer and open-hearth billets, 4 x 4 inches, and slabs, up to and including 0.25 carbon, $23 Pittsburg, Wheeling, Valley, Johnstown, Ashland, Ky., Irontown, O., and Lorain, O. ; 0.26 and including 0.60 carbon, $1 advance ; and 0.61 to 1.00 carbon, $2 advance. Billets smaller than 3⅞ inches and sheet and tin bars are $1 per ton extra. Bessemer and open-hearth rods are still quoted at $30 to $31 Pittsburg.

Coke.—Cfferings of coke are heavy and lower prices are prevailing. Furnace coke is held at $1.50 to $1.55, while special brands command as high as $1.65, while the minimum on foundry is $2 and as high as $2.25 is being paid. Coke production is increasing, the output of the upper Connellsville region being estimated at 210,385 tons during the week ending Saturday, April 23, while the output of the lower region during this period was 55,538 tons.

Notes of the Trade.

THE following hardware merchants of St. John, N. B., have decided to close their stores on Saturday afternoons during June, July and August : W. H. Thorne & Co., Limited; the S. Hayward Co., Emerson & Fisher, Kerr & Robertson, H. Horton & Sons, I. & E. R. Burpee, M. E. Agar, the McClary Mfg. Co., John J. Barry, the James Robertson Co., Limited, T. McAvity & Sons, John W. Addison.

Among the firms whose stands were saved from the recent fire in Fernie, B. C., were Sheppard & Elliott, hardware merchants, and the British Columbia Furniture Co.

"Douglas, Prowse & Co." is the style of a new wholesale and retail hardware firm occupying the old stand of A. M. Bell & Co., Halifax, N. S.

Robert Craig, hardware merchant, Franklin, Man., has married Charlotte McKone.

Samples of James Cartland & Sons, Limited, brass-founders, of Birmingham, Eng., are now being shown to the trade by Mr. Mitchell, their Canadian traveller.

The J. H. Ashdown Hardware Co., Limited, have been authorized to carry on a general hardware business in British Columbia. The capital of the company is $1,000,000, and the head office is to be situated at Nelson, B. C.

HARDWARE CONDITIONS IN MANITOBA.

Office of HARDWARE AND METAL
Room 308 McIntyre Block,
Winnipeg, May 4, 1904.

BUSINESS for the past week shows much improvement over the week before. Throughout Manitoba and the Northwest seeding is well under way, but there are still a great many farmers that have not even sown a seed on account of the watery condition of the ground.

* * *

Merrick, Anderson & Co., have found their office space rather inadequate to their requirements and have extended their office quarters. They have also made numerous other improvements, which have greatly added to the interior appearance of the building.

* * *

Mr. G. F. Stephens left Winnipeg on Monday, May 2, for St. Louis Exposition, and will be gone about three weeks.

* * *

The market practically holds to the price list as quoted last week, with the exception of glass, which has advanced. We quote :

Barbed wire, 100 lb.	$3 15
Plain galvanized, 6 to 8	3 39
" 9	2 50
Plain galvanized, 10	3 50
" 12	3 10
" 13	3 20
" 14	3 90

NEW BRAKE FOR ELECTRIC CARS.

A NEW lever brake combination for electric cars has been invented by an employe of the Bertram Engine Works Co., Toronto, and is at present being tested by the Toronto Railway Co., and the Metropolitan Railway Co. The new combination consists of a lever attachment which is interposed between the brake staff and brake lever of the car which takes up the slack quickly. This new combination is said to increase the brakeman's power over the car by nearly 100 per cent. The invention was developed by the inventor from a suggestion by the New York Railway Commissioner that if some increased power could be given to the ordinary hand brake no other kind of brake would be used on street cars on account of safety and simplicity.

Patents have been applied for and capital interested so that the brake will probably be on the market within a short time. The Toronto Railway Co. are so taken with the new brake that they will be the first to be supplied with them.

PAINT, OIL AND BRUSH TRADES

Some Hints re Varnish.

THE Paint Review reproduces the following hints regarding varnish from an advertising booklet :

How delicately nature works out her own artistic creations, yet nature never does for man what man can do for himself. Did you ever notice a piece of quartered oak as it comes smooth sandpapered from the mill ? How gray and lifeless it is. The curious markings formed by the growth of the tree, the layers of wood fibre piled one against the other are all there, but you cannot see them.

Varnish is needed to bring out the full and true beauty of the wood, to reveal its grain and show distinctly the beautiful figures which nature has wrought for our delight.

It is varnish that gives the mirror-like lustre to the surface of a carriage or railroad car; that adds beauty to your furniture, that in a thousand ways contributes to the joy of living.

But varnish does more than that, it not only beautifies the surface to which it is applied but by sealing it in an impervious air and moisture tight envelope, it preserves the structure of the material and adds durability to it. Varnish keeps the spars of the yacht from cracking and splitting; preserves the cabins and upper work, the front door and other woodwork of the house to which it may be applied.

The measure of this added durability and protection is determined by the quality of the varnish.

Some varnishes are good—made of the best quality of material, properly proportioned, good honest varnishes that possess extreme durability and afford the maximum of protective power—varnishes that hold their lustre, and neither grow dim nor crack prematurely.

No varnish will dry properly if applied in a cold or damp atmosphere. Don't expect to get good results if the finishers have to work in cold rooms in Winter time, or if the windows are left open on a damp or foggy day even in Summer. Varnish needs a temperature of at least 70 degrees, to dry properly. The freshly varnished surfaces must not be allowed to become chilled by the night air. At any season of the year, keep the windows closed, while varnishing, to avoid draughts.

Linseed Oil Quality.

HARDWARE AND METAL would appreciate the unbiased opinion of the trade as to which is the best brand of linseed oil made in Canada. The answers will be treated as confidential, the end of the enquiry being to decide on a point raised between two jobbers of linseed oil.

Here is the situation : One jobber states that a second house has offered a certain brand of oil at a price but did not have a supply of the brand in question, and intended substituting an inferior brand. The latter jobber, while not admitting he ever offered for sale the brand referred to, claims the oil mentioned is in no wise superior to the one he has handled for some time and is still handling.

The question then arises, is there a material difference in the quality of any Canadian brand of linseed oil as compared with other brands ? If there is, which is the best oil and what are your reasons for the opinion ?

——

"It's An Ill Wind," etc., etc.

Owing to the strike of the house painters in Montreal there has been a remarkable falling off in the turn-over in white lead and zinc. A number of contractors are now using prepared paints, and the liquid paint department of the Canada Paint Co., Montreal, report a tremendous impetus owing to the demand for mixed paints which from their very composition and easy method of application, readily adapt themselves to be used, not necessarily by trained mechanics, but by any one of common sense who can handle a brush. Unless the house painters of Montreal get to work pretty soon it is feared they will find the Spring painting all done and their occupation gone.

REKA OCHRE

Ground in Refined Linseed Oil. . .

For fineness of texture and strength of tinting qualities, it is in a class by itself.

A rich chromy shade for less price than ordinary yellow ochre will cost you.

It is one of our rapid sellers and will be the same with you. Mailing sample free on application.

PAINTS

Paints are being made better than they once were, and they are being made worse,—it depends on the maker. They can be made better because science has developed and machinery has improved. It is a matter of will, of purpose.

Sterling Paints

stand out from among the confusion of branded paints alone. They are the perfection of good paint making. Then why not sell them? They do you good and your customers good. Always serve your customers' best interests if you would enlarge your business.

THE GRANT-HAMILTON OIL CO. LIMITED.

MAKERS OF STERLING PAINTS — TORONTO.

Paint and Oil Markets

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, May 6., 1904.

A FURTHER weakening in the linseed oil markets is reported this week, and at least one house has dropped quotations 2c per gallon. The old prices are still given out by the other houses and the range of local quotations will be found below. Turpentine, while retaining its strength in the southern markets, is slightly easier locally, but no actual change in price has been made. The market has been bare for some weeks but new supplies are expected almost immediately, and on their arrival prices will probably be shaded. White lead is still quoted at extremely low figures and it is impossible to quote with exactitude. Stocks are sold ahead for Spring and Summer, and while deliveries are being made there is little booking of orders for Fall shipment.

Navigation is now open both ways on the St. Lawrence and the first boats left early in the week for the lakes and for the Maritime Provinces. A great impetus has been given to general business and a very busy May is expected. We quote:

Ground White Lead—Best brands, Government standard, $4.50; No. 1 $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead—$4.25 in casks, and in kegs $4.50.

Dry White Zinc—Pure dry, in casks, 6 1-4c; in 100-lb kegs, 6 3-4c; No. 1, zinc, in casks, 5 1-4c; in 100-lb kegs, 5 3-4c.

White Zinc—(ground in oil)—Pure, 25-lb irons, 8c; No. 1, 7c; No. 2, 6c.

Putty—Bulk, in barrels, $1.50; in 25-lb tins and irons, $1.80; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7c; 100-lb kegs, 7 1-4c; smaller quantities, 8 1-4c.

Red Leads—Genuine red lead, in casks, $4.25; in 100-lb kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks, $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge—Ground, casks, 5c; in less quantities, 5 1-2c; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

85c per gallon; 2 to 4 barrels, 83 1-2 to 84c per gallon. Standard gallon of 8.6 pounds. The difference in quotations is due to different terms of payment.

Turpentine—Single barrels, 84 1-2c to 85c per gallon; 2 to 4 barrels, 83 1-2 to 84c per gallon. Standard gallons of 8.6 pounds. The difference in quotations is due to different terms of payment.

Linseed Oil—Raw, 1 to 4 barrels, 43 to 45c; 5 to 9 barrels, 42 to 44c; boiled, 1 to 4 barrels, 46 to 48c; 5 to 9 barrels, 45c to 47c. Delivered in Ontario between Montreal and Oshawa at 2c per gallon advance.

Shellac Varnish—Pure white, $2.85 to $3.50; pure orange, $2.75 to $3.40; No. 1 orange shellac, $2.45 to $2.60.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil—8 3-4 to 9 1-4c in wholesale lots, and 1-2c additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c; 25-lb drums, 15 1-4c; 1-lb packages, 16c; 1-2-lb packages, 18c; 1-lb tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c per lb; 25 lb drums, 15 1-2c; 1-lb paper boxes, 16c; 1-lb tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

Ontario.

Office of HARDWARE AND METAL,
10 Front Street, East.
Toronto, May 6, 1904.

THE sudden change to warm. Summerlike weather has given quite an impetus to business during the last week. There is a particularly good movement in such lines as mixed paints, varnishes, dry colors, and white lead. Paris green is more freely called for. Turpentine reports are conflicting. One importer has received advices to the effect that "in Savannah there has been considerable trading in May to August futures and some hundreds of casks have been sold to exporters. The market is maintained at the price that has controlled it for some time past, and as 60,000 casks are sold in advance for May to August factors refuse to believe that there is any probability of the market going below the present figures." On the other hand one of the large wholesale firms are quoting a reduction of 1 1-2c this week. Linseed oil is in much the same position. A quotation 4c below last week's figures is made while the association prices are unchanged. Other products are steady at unaltered figures.

White Lead—Ex-Toronto, pure white lead, $4.65; No. 1, $4.20; No. 2, $3.90; No. 3, $3.50; No. 4, $3.25 in packages of 25 lb and upwards; 1-2c per lb extra will be charged for 12 1-2-lb packages; genuine dry white lead, in casks, $4.50.

Red Lead—Genuine in casks of 560 lb, $4.25; ditto, in kegs of 100 lb, $4.50; No. 1, in casks of 560 lb, $3.75 to $4; ditto, in kegs of 100 lb, $4.25.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

HENDERSON & POTTS, LIMITED, HALIFAX, N.S.

Statement Relative to Canadian Act in Restraint of Fraudulent Marking.

This Act prohibits the use of the terms PURE or GENUINE for White Lead in Oil, unless the article's composition is as required by the Canadian Government. At the present time it is appropriate for us to make the following declaration: "All White Lead Paint sold by us as PURE or GENUINE is, and always has been, chemically pure and as required by Law. If this statement can be refuted by any purchaser of our PURE or GENUINE White Lead Paint, we hereby agree to refund the full amount of such purchase, bear expense of the analysis, and forfeit the goods."

Window Glass.

MONTREAL.

The market is still unsettled but no changes have been made locally. As noted before Belgian prices were advanced in anticipation of a general strike, and although May Day has apparently passed without any special outbreak these prices are still quoted, and it is probable that importers will be obliged to advance their quotations to the Canadian trade. In the meantime we still quote as follows: First break, 50 feet, $1.70; second break, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

Window glass

TORONTO.

The warm weather has had an excellent effect on this market. Prices are nominally as follows: Star, first break at $3.30 per 100 feet and Double Diamond first break, at $5.10. Discount, 15 and 20 per cent.

WALL PAPER.

The Sample Book.

IN the majority of stores the salesmen consider that the only way open to them to display wall paper to a customer is by means of the sample book. A small stand is kept in a convenient, well-lighted position and beside it are the sample books ready to hand. A customer states the price he wishes to go, and possibly the room for which the paper is being bought, and the salesman simply selects a sample book, throws it on the stand, and proceeds to show its contents. Seldom does it enter his head that there are better or even other ways. If that is not the use of sample books, what are they for?

As a matter of fact the sample book need, and should, seldom be called into service. It would have been far better for the trade had they never been introduced. At the present time in spite of the prevalence of this method of showing goods, the first-class wall paper stores do entirely without them. It may occasionally be found expedient to bring into use the book of samples, but this occurs only when a customer demands it, on account of having a perfectly definite and settled idea what he wants, such as he will have if looking for a sample to match a paper already in use.

In nineteen cases out of twenty the rolls themselves should be shown. For this purpose a permanent rack about six feet in height and of as great a width as is convenient should be built where the light falls squarely on the front of it. The width should be great in order to allow several rolls to be shown together, in order to make a choice between them. A little trough at the back of the top will hold the roll, while four or five feet hang over the front.

After serving a few customers by showing the rolls, the salesman will be thoroughly convinced of the advantages of this method, and if he has the interests of his employer at heart, rather than a sole idea of saving himself a little work, he will never return to the sample book. No sample a foot and a half or two feet long does justice to the pattern or coloring, and the customer has little idea of how the paper will look on the wall. The appearance of a five-foot strip hanging over the rack can be readily grasped, and when another strip of the same pattern is placed beside it and matched, there is no doubt as to its beauties or defects.

By this method of showing the salesman is called upon to display many less samples, and the customer is more quickly and better satisfied. The hasty turning over of the leaves of a sample book confuses and unsettles, and far more difficulty is encountered in making a selection. The two or three previous choices are forgotten because out of sight, while with the rolls, they are placed side by side and a final selection easily made. Sales can be made from rolls that would be lost if the sample book were used, and there is no chance of the customer being disappointed when the paper is put in place.

STOVES AND TINWARE.

To Connect Conductor to Gutter.

IN answer to an enquiry as to the "best way to connect a conductor to a roof gutter—that is, whether or not it is policy to run the drop through the cornice—as we have had trouble with the tube bursting this Winter, thereby causing a bad leak through the water following the cornice back to the wall," the Metal Worker answers: "The surest way to avoid leakage into the building is to run the outlet, or gooseneck, out over the roof and offset back to the wall along the outside face of the cornice. If, however, this method is not feasible or acceptable, owing to the construction of the gutter, or the appearance, the next best way is, first, to run a large tube from the gutter through and to the lower edge of the cornice, or wherever the conductor pierces the exterior face of the cornice, and then run the conductor outlet through this tube. The difference in diameters of the tube and outlet gooseneck need not be large enough to leave an unsightly opening when the conductor emerges from the cornice. A perforated end board can be soldered into the lower end of the tube, the tube being cut off and the end stop conforming to the profile of the cornice, and a hole being cut in the end board to neatly fit the conductor or gooseneck. Both the tube and the gooseneck should flange out and be well soldered to the gutter. This method provides for any leakage through the gooseneck by means of the outer tube, which, of course, would conduct any such water to the outside of the cornice and the building. Another comparatively safe method is to construct that part of the conductor or outlet that passes from the gutter to the outside of the cornice of heavy sheet lead, which can be readily formed or bent to any desired curve, and, being very soft or ductile, will allow for considerable extension caused by ice without bursting. In any case it is best to have the conductor terminate at the top in an open head, or box, for receiving the water from the gutter outlet, so that the outlet may be more accessible and less liable to be choked with ice from the conductor."

Action of Air on Sheet Zinc.

A study of the action of the atmosphere on zinc, recently read before the Chemical Society in London by G. T. Moody, is abstracted as follows by Science: Strips of thin sheet zinc were exposed for five months to the action of the atmosphere, with the result that the metal became completely covered with a half crystaline coating of a basic carbonate. From this it appears that the corrosion is to be ascribed, not to a direct oxidation, but to the action of the atmospheric carbonic acid. A confirmation of this was found in the fact that zinc dissolved in a saturated solution of carbon dioxide, the acid carbonate of zinc being formed, and on spontaneous evaporation a precipitate of basic carbonate was found, of the same composition as that occasioned by atmospheric corrosion. While commercial hydrogen peroxide has a very rapid action nor zinc, converting it into the hydroxide, pure hydrogen peroxide, even of 30 per cent. strength, is entirely without action, and the same is true regarding iron. Lead, on the other hand, is rapidly acted on by this reagent, being converted superficially into lead peroxide. Thus the action of the atmosphere on lead may be due to the presence of hydrogen peroxide, but this cannot be the case with the corrosion of zinc and iron. That zinc is less corroded in the atmosphere than iron is attributed by Mr. Moody to the fact that so much of the carbonic acid is retained by the zinc in the form of basic carbonate, while in iron the carbonic acid is set free as soon as it has done its work, and thus keeps on in its attack upon the iron.

Has Earned a Holiday.

Mr. John Miller, heating engineer of the Pease Foundry Co., Toronto, sailed for Liverpool on the White Star steamer Arabic, on Friday, April 29. Mr. Miller intends spending some time in Europe on a well-earned rest and holiday trip.

The premises of E. K. Spinney, Yarmouth, N. S., wholesale and retail hardware dealer, were entered by thieves Monday evening, but nothing was secured.

HEATING AND PLUMBING

MONTREAL PLUMBERS STRIKE.

THE differences between the master plumbers and the Journeymen Plumbers' Union reached a climax on Monday morning, when a lockout was declared against the union by the masters, and at the same time a strike was ordered by the union.

The situation is about what was expected, as relations have been strained for some time. Several months ago the master plumbers organized to the number of eighty-five, representing over nine-tenths of the plumbing trade in Montreal, to withstand the union in its unreasonable demands. They agreed to support a fund for this purpose, each member contributing according to the number of men employed. They further resolved that after the first of May they would recognize the union under no condition whatever, but would feel free to employ whom they chose, whether union or non-union men.

A short time ago the union demanded an increase of wages and a nine-hour day, which were granted. They now demand an eight-hour day, a minimum wage of 35c an hour, and recognition of the union. Both sides seem to be taking a decided stand. The master plumbers say while they employ help they are going to be masters of the situation, and the union insists on its demands and recognition. What the outcome will be is not known, but it is probable that the place of the strikers will be filled. A good many of the men have left the union and have returned to work.

Joseph Thibeault, president of Canadian Master Plumbers' Association, stated to a representative of Hardware and Metal that they had every prospect of winning. He said, further, that from a quarter to a third of the men were working, so that they were not badly handicapped as business was not rushing at this season.

"The men are free to return to their places, and any wage difficulty will be easily settled, but they must continue work as private individuals and not as a part of the Local Journeymen Plumbers' Union," were his parting words, and he seemed in earnest.

James Ballantyne, who is one of the largest employers in the city, has more steamfitters than he requires, and expects to have all the men he needs by the end of the week.

J. W. Hughes when interviewed said: We intend to be masters of the situation, and it is not the matter of wages that is the trouble. The demands of the men are too great to be taken into consideration. We are getting along nicely with about one-third of our usual staff. We are not in a position to state anything definitely about the future, but are satisfied to let matters rest as they are."

It is a little early to predict what the result will be, but from the determined stand made by the master plumbers it is probable that they will seek from outside sources to fill the ranks of the striking plumbers. Already they have secured a good many Old Country workmen, who arrived lately by train from Halifax, and will likely have more in the near future. The latest reports seem to indicate that the strikers are willing to lessen their demands, but as to whether this will have any effect on the lockout against the union by the master plumbers is not known.

Building Permits.

MONTREAL.

M. Gagnon, Joliette street, one building to cost $2,000.

E. Fournier, St. Denis street, two houses; cost $25,000.

The Gurney Foundry Co., Limited,
TORONTO WINNIPEG VANCOUVER

CORRESPONDENTS:

THE GURNEY-MASSEY CO, LIMITED,
MONTREAL, QUE.

THE GURNEY STANDARD METAL CO., LIMITED
CALGARY, ALTA.

J. H. King, three pairs of dwellings on the corner of Hatton and Shaw streets, to cost $18,000.

D. S. McCurdy, a two-storey and attic brick and stone residence on Rushholme road, to cost $1,800.

The Standard Rolling Mill Co., Ltd., a brick and stone addition to 223-237 Front street east, to cost $7,500.

W. B. Charlton, a pair of semi-detached two one and one-half storey dwellings in Simpson avenue, to cost $4,000.

Plumbing and Heating Notes.

The city of St. John, N. B., is spending $400,000 in the extension of its water supply system.

The Civic Committee of the City of Winnipeg have just placed 45 new arc lights in different parts of the city.

The Arc and Light Committee of the Ottawa City Council are thinking of establishing a municipal street lighting plant.

Tenders are being called by M. Howe for a complete system of hot water heating for the Pembroke High School. The time for acceptance of tenders extends to May 18.

The Minister of Inland Revenue has consented to receive a deputation of electric light manufacturers, who wish to interview him in regard to the standardization of electric lights.

The National Association of Master Steam and Hot Water Fitters of the United States will meet in convention in Atlantic City on June 13-16. The Hotel St. Charles will be convention headquarters.

The heating and ventilating contracts of the Bank of Nova Scotia and of the Jarvis Street Baptist Church have been completed by the Andrews and Johnston Co., heating and ventilating engineers, Chicago.

The application made to the Legislature by Montreal for power to borrow money in order to take over the plant of the Montreal Gas Company, which the city was entitled to do according to the agreement made five years ago, has been turned down by the private bills committee. The city's application for power to borrow a million and a half for the purpose of constructing conduits for placing electric light, telephone and other wires, has also been refused.

Building Notes.

Robert Darling, Toronto, will rebuild.

A new school is to be built at Dresden, Ont.

A. Bradshaw & Sons, Toronto, will rebuild.

A new town hall is to be erected in Belmont, Man.

A new Y. M. C. A. will be built at Peterboro, Ont.

An Evangelical church will be erected in Berlin, Ont.

W. Jessop & Sons, burned out in Toronto fire, will rebuild.

An extension is to be made to the Wesley church, Winnipeg.

Strathcona, N. W. T., has voted $25,000 for a new hospital.

A school house is to be built at Lund, Comox District, B. C.

P. Shea is erecting a brick residence on Colony street, Winnipeg.

W. J. Gage & Co., Toronto, have ordered plans for a new building.

The building of Westwood & Co., Bay street, Toronto, will be rebuilt.

It is probable that a new school will be erected at Pilot Mound, Man..

A $12,000 addition is to be put to the Collegiate Institute, Guelph, Ont.

The six-storey building of the Cowan Company, Toronto, will be rebuilt.

A stone block is to be erected in Morden, Man., by Winkler & Coppenger.

The Wyld, Darling Co. are considering the erection of a seven-storey building.

It is proposed to erect a new town hall in Dauphin, Man., to cost $11,000.

The Henderson Roller Bearing Co., Toronto, will rebuild on King street west.

Gordon, MacKay & Co. will erect a four-storey building on Front street west.

Dignum & Monypenny, Toronto, have awarded a contract for a new warehouse.

It is probable that a town hall will be built in Hartney, Man., in the near future.

Perth, Ont., has accepted Engineer Welch's plans for a $30,000 system of waterworks.

Building has commenced on the new warehouse of McLeod & Hanley, Brandon, Man.

The Eckardt Casket Co., burned out in Toronto's recent fire, will rebuild on a larger scale.

The Immigration Department are proposing to erect an immigration hall in Brandon, Man.

E. G. Laverdure is erecting ten modern brick veneered houses on Sussex street, Ottawa.

A frame dwelling, to cost $2,000, will be erected on Seymour street, Vancouver, by John Dorman.

Work on the new Ottawa University building has been commenced by Peter Lyall & Son, Montreal.

A frame office building and dwelling is to be erected on George street, Vancouver, to cost $4,000.

A brick house is to be built by Thomas Lovejoy on Wentworth street, Hamilton, to cost $1,000.

Tenders for a steel pile trestle bridge are invited by W. G. McGeorge, engineer, Chatham, Ont.

The brickwork of the residence of H. Barret's house at Point Road, near Kingston, has been completed.

The Western Canada College, Calgary, N. W. T., have decided to go on with the building of the college at once.

Two dwellings will be erected on Harwood and Thurlow streets, Vancouver, to cost $2,250 each, by F. M. Evans.

A new Canadian Bank of Commerce building will be erected in St. John, N. B. Tenders are being called by H. H. Mott.

A frame residence is being built on Kennedy street, Winnipeg, by Mr. Partington; V. W. Harwood is the architect.

Two dwellings are to be erected on Albernie and Denman streets, Vancouver, to cost $1,800 each, by Crowe & Wilson.

Tenders are being called for the construction of a court house for Albert County, N. B., by W. O. Wright, St. John.

Pugsley, Dingman & Co., whose warehouses and sales department were destroyed in recent fire in Toronto, will rebuild.

Suckling & Co., Toronto, have signed a contract for the erection of a building to replace that partly destroyed in the recent fire.

Work has been begun on a pair of warehouses on York street, Toronto, for the Merchants' Dying and Finishing Co , and Garside & White.

James Campbell, clerk of Londesboro, Ont., invites tenders for concrete abutments and steel superstructure for three bridges in Londesboro township.

Total amount for building permits and alterations registered at the Montreal City Hall for April, is $501,138, which represents an increase of $150,000 over last year.

Negotiations are being carried on with the Macdonald Engineering Co. for the erection of a large steel and cement block on the corner of Victoria and May streets, Fort William.

Tenders have been called for the erection of the shops and buildings of the Winnipeg Electric Street Railway at Fort Rouge, Man. The cost of the buildings will be $30,000 probably.

The W. R. Brock Co., wholesale dry goods merchants, Toronto, have purchased the site adjoining their former premises and will rebuild on the two sites a uniform four-storey warehouse.

There have been unloaded at the new Bank of Montreal premises in Montreal, two large stones, each of which weigh about nine tons, which are being placed in their position in the new building.

Grants have been made from the S. P. C. K. block grant towards the erection of churches at the following places in Manitoba: Norwood, Virden, Gladstone, Manitou, New Haven and Bonnie Doon.

A large amount of building will be done in the vicinity of Flesherton, Ont., this Summer. Among the buildings to be erected are: Houses for R, Hay, S. McMullen, W. Buskin and J. Duncan; barns for T. Betts, M. Duncan, Wm. Chard and J. Cullen.

Electrical firms in Winnipeg have complained to the Civic Fire, Water and Light Committee that much of the danger to public buildings from fire is caused by electric wiring being done by incompetent persons. They have petitioned that the fire by-law be amended so that buildings may not be wired except by duly licensed persons.

There will be considerable building in Britte, Man., this Summer. An addition of two rooms is to be made to the school house. Wilson, editor of Eye-Witness, is building a business block. J. Patterson is erecting a dwelling on Centre street, and T. Bell is building a brick residence on Main street. Roseborough & Wilson are extending their workshop.

James Ballantyne has been given the contract for heating and plumbing the new M. A. A. A. Club House on Peel street, Montreal. He has just completed the heating and plumbing installations of the two new Bell Telephone exchanges—the Hospital street and the east end branches.

* * *

Uuion Brewery, Limited, Montreal, have been incorporated with a capital of $50,000, to carry on the brewing and malting business in all its branches. The directors are: E. F. Lariviere, Wm. Wainwright, T. G. Roddick, J. J. Ryan, Wm. Strachan, R. Lemieux and H. Gerin-Lajoie, all of Montreal and district.

* * *

The Canada Coal and Railway Co., proprietors of the Joggins mines, in Nova Scotia, have applied for and have been granted a winding-up order, and Jas. Rogers, of Galt Bros. & Co., Montreal, has been appointed receiver. The present difficulties are attributed to bad management a few years ago, when the development work was not kept up.

* * *

Fruitatives, Limited, Ottawa, have been incorporated with a capital of $500,000, to manufacture and deal in all kinds of medicines and drugs, and to acquire the trade marks and all other rights appertaining to certain medical preparation known as "Fruitatives." The directors are: A. Rogers, G. F. McCormick, E. S. Leetham, all of Ottawa; and A. Maclaren, Buckingham, Que.

* * *

The Hemming Manufacturing Co., Limited, Montreal, have been incorporated with a capital of $45,000, to manufacture and deal in gold, silver and enamelled jewelry, sterling and plated ware, fancy goods, and to engage generally in the business of goldsmiths and silversmiths. The directors are: H. K. S. Hemming, A. McFee, H. K. Danford, C. A. Duclos, all of Montreal; and C. A. Younge, Winnipeg.

* * *

The White Rock Brewing Co., Limited, Ste. Theresa de Blainville, Que., have been incorporated with a capital of $50,000, to carry on in Canada the business of brewers, malters, distillers, canners, and vinegar and pickle manufacturers, and to acquire the brewing and malting business carried on at Ste. Therese de Blainville under the name of La Brasseries Du Nord. The directors are: D. Clouthier, Ste. Theresa de Blainville; G. C. Douglass, R. Douglass, and J. L. Gagnon, all of Montreal; A. R. Bedard, Quebec.

* * *

The Church & Watt Co., capitalized at $40,000, of which $10,000 is now paid up, are negotiating with the St. Mary's Board of Trade with the idea of establishing a harness factory in that town. They propose to erect a factory to cost $7,000, and install machinery valued at $8,000.

* * *

The Kingston & Dominion Central Railway will apply through Walter Barwick, Toronto, to the Legislature for incorporation. The object of the organization is to build an electric railroad from Kingston to a point on Georgian Bay between Parry Sound and Midland, and also to construct and operate steamships, telegraph and telephone lines in connection with the railroad line.

* * *

The Yarmouth Light, N. S., says that the Western Iron & Steel Co., which was incorporated two years ago with a capital of $3,000,000, will begin shortly the development of the iron ore districts at Torbrook, Annapolis County, N. S. It is also said that the company have under consideration the erection of blast furnaces at Parrsboro, utilizing the coal from the Spring Hill collieries in the manufacture of the coke necessary for the furnaces.

* * *

It has been announced in Victoria, B. C., that a number of mines in British Columbia, consisting chiefly of silver-lead mines, which have been idle for some time, have now resumed operations. Among these is the St. Eugene at Moyie, which mine has a large output of silver-lead ore. The restarting of this important mine is regarded as being indicative of the improved condition of this industry in the Kootenay District.

* * *

The absence of Bessemer ore in any quantity has been a great drawback to the establishment of an iron and steel industry in Ontario. The Crown Lands Department have received reports to the effect that the International Iron Co. have made a rich strike of ore in Hunter's Island District, Ont., just north of the international boundary line, and a few miles from the Vermillion iron range of the Northern States. Should this deposit turn out to be as extensive and of a richness such as the reports

"SHIELD BRAND" SHEATHING

TARRED or DRY.

CANADA HARDWARE CO., Limited, Montreal

from the Iron Company claim, the prospects of the development of an iron and steel industry in Ontario are good.

NOTES.

The Frost Wire Fence Co. are erecting a $100,000 plant in Hamilton.

About 50 laborers employed by the Montreal Steel Co. have gone out on strike.

The rod mill of the Dominion Iron & Steel Co., at Sydney, N. S., has commenced operations.

The Canada Screw Co., Hamilton, are making alterations to their premises to cost $1,500.

The Hartney Manufacturing Co., Hartney, Man., are erecting several new buildings.

The Guelph Junction Railway have been granted power to extend their line from Guelph to Goderich.

The Woodstock Lumber and Manufacturing Co. are applying for incorporation. Those interested are: J. N. W. Winslow, H. W. Bourne, H. Post, W. Stone, and A. Stone, all of Woodstock.

President MacKenzie, of the Canadian Northern, says that the construction work on their road will be completed to Edmonton this Summer.

Barber & Ellis, manufacturing and wholesale stationers, Toronto, who were burned out in the recent fire, will maintain their Toronto warehouse, but it is possible that they may remove their factory to Brantford.

It seems very probable that there will be zinc smelting works established at Fernie, B. C. The Crow's Nest Pass Coal Co. have been asked to quote prices on slack coal for use in this proposed smelter.

Chas. Moore, secretary of the Union Trust Co., says that the first output of the Canadian Improvement Co., formerly the Consolidated Lake Superior Co., will be steel rails, which will start with 100 tons per day.

All the steel work of the buildings of the International Portland Cement Co. near Ottawa, is now completed, and other work on the plant is being pushed ahead rapidly. The severe Winter has delayed the work somewhat, but now building is going on quickly.

At the recent meeting of the Brandon Board of Trade a communication from the Palmerston Carriage Factory was read, asking for information regarding the privileges granted by the city to manufacturers, and proposing to erect a carriage factory there to employ 100 hands.

Foley Bros., Larson & Co., the American contracting firm who have secured the contract for all the construction work of the C. P. R. in the west this season, say that they will employ only Canadian labor in the carrying out of their contracts.

The Vancouver Portland Cement Co., Limited, Vancouver, B. C., have been incorporated with a capital of $500,000, to manufacture and deal in Portland and all other kinds of cements.

The National Herb Co., Limited, Toronto, have been incorporated with a capital of $25,000, to manufacture and sell medicine. The directors are: J. J. Lindsay and H. L. Thompson, both of Toronto; G. H. Lindsay and C. E. Lindsay, both of Lindsay, Ont.

A PNEUMATIC HAMMER.

THE Iron & Steel Trades Review, London, Eng., says that J. G. Peiseler, Runsheid, has put upon the market a pneumatic hammer with automatic forging appliance which will help in the changes that are now going on in the manufacture of files. The invention consists of a cylinder containing two separate pistons, the upper one driven by a crank and connecting rod, the lower one connected to the ram of the hammer. When the upper piston rises, the ram piston is drawn up by suction; on descending the ram piston is forced down by virtue of the air between the two pistons being compressed. The space below the ram piston is in communication with the atmosphere by means of an air opening in the side of the cylinder. The maximum striking force is attained at full speed, but the intensity of the blow can be modified by adjusting a nut on the regulating rod of the distribution slide, which decreases the size of the air opening in the cylinder mentioned above, thus producing a cushioning effect on the ram piston as it descends.

The machine is applicable to the forging of square, triangular, hexagonal and round sections.

STRUCTURAL STEEL CONTRACTS.

Many hardware merchants have not realized the possibility of business opened up to them in the building operations in their vicinity.

Let us, for instance, grant that a school is to be erected in the hardware-dealer's locality. A score of materials will be needed, all the way from cement for the foundation to roofing material for the roof. Of these materials the hardwareman may get enough profit out of one to recoup him for the efforts he has spent in selling all.

How many hardware merchants really appreciate the offer made by the Hamilton Bridge Works Co., Hamilton, Ont., regarding their structural steel. Modern architecture is demanding, in constantly increasing degree, the use of structural steel in building operations. This firm, recognizing the reliability of hardware merchants and the wide connection they have with building operations, have made an offer to the trade which should not be neglected.

They ask retailers to act as their agents; not to carry stock, but rather to be on the lookout for business. When the hardwareman learns of a building to be erected which will call for structural steel, he is requested to give as full information as possible to the Hamilton Bridge Works Co., and to use his influence to secure the order for that firm. He is not called upon to stock or instal any goods, merely to secure information and to use his personal influence.

FINANCE AND INSURANCE

BANK clearings for March in the United States have been the smallest since 1901, and bank failures the heaviest since 1897. Especially has this been the case in the West. Following up the decline in stocks, commodities are now beginning to recede as well, making the cost of living cheaper for the wage-earner. The fact that at length prices are declining is proof, as in the stock market, that decline is a necessity at last and must go further, unless there is to be a revival of trade, which seems impossible. That the old level was abnormal and that the new level is more reasonable may both be admitted without making the marking-down process painful to sellers. In plain English, commercial classes are about to experience something of what Wall street has already passed through.

* * *

THE thirty-fourth annual report and list of shareholders of the Royal Bank of Canada has been issued in the form of a handsome booklet. The report exhibits a satisfactory increase in the business of the bank during 1903. Deposits have grown considerably. Both the paid-up capital and the reserve fund have been increased to $3,000,000 and the balance of profits carried forward exceeded the same balance in 1902 by nearly one hundred per cent. The assets of the bank exhibit a corresponding increase, being now well over $25,000,000. Altogether the report is a most satisfactory one.

In addition to the list of shareholders, with their holdings, several pages of statistics about the Dominion of Canada are appended, supplying in concise form much useful information.

* * *

SOME writers, in this country, have been making very favorable criticisms on the great advances made by the Canadian banking institutions. Taking 1st January, 1903, as a basis, comparisons have been made of the Dominion and Australian banking systems.

Thus, the Canadian banking returns—approximately—compare as follows with those of the Commonwealth :

	Canada.	Commonwealth
Note circulation	£13,485,117	£ 3,128,184
Deposits	79,725,886	88,543,660
Specie	2,578,447	19,413,191
Government notes	4,946,115	631,068
Paid-up capital	15,679,746	16,914,280
Reserves	10,074,817	5,783,689

The comparison is an interesting one, as it clearly shows the difference between the two systems of banking.

* * *

IN their review of the stock market, under date of April 22, Aemilius Jarvis & Co., Toronto, say : "Money locally appears to be gradually working easier. It is not unlikely, however, that there may be a temporary check in this direction as the result of the heavy sums the insurance companies will be called upon to pay to the owners of buildings destroyed by fire here. It is too early to express a very definite opinion as to whether this fire may have any serious effect on our local stock markets. None has been evidenced so far, and it would appear to us probable that none of the companies affected would be the owners of any considerable quantities of the stocks ordinarily dealt in on our exchange. In the absence of any forced liquidation, the financial situation is sufficiently easy to justify our feeling that the call of loans by fire insurance companies should not materially affect prices."

* * *

ON April 22 the Toronto Board of Underwriters ratified the schedule increasing fire insurance rates in Toronto by 75 per cent. The schedule reads : "Extra rates and tariff changes operative on and after 20th inst., for all business, new and renewal.

"Congested District—On all mercantile, schedule and other specially rated risks, building and contents, except dwellings, add $1.00 to rate. Where three year policies are permitted, the extra to be added to the three year rate.

"Outside District—On all risks, building and contents, except dwellings, add 50c to rate. A reduction of 25c may be made on residential store risks in outside district, with the usual warranty. Where three year policies are permitted, the extra to be added to the three year rate.

"Sprinklered risks and fire-proof buildings—Half the foregoing extras to be added to rate, buildings and contents.

"Co-insurance—A reduction of 15 per cent. from rate on building, and 10 per cent. on contents may be allowed for the 80 per cent. co-insurance clause.

"New policies—New policies must be issued on all risks affected by these changes."

THE AGE OF STEEL.

—Structural STEEL for Buildings, Roofs, Bridges.
—We supply it, but first we want to know the names of builders with jobs on hand.
—Give us the names of these builders.
—We try to do the rest.
—If you help us get a contract, and we get it, we pay you well.

Paterson's Wire Edged Ready Roofing

has successfully stood the test of Canada's variable climate for over twenty years, and is the only popular substitute for shingles.

We are advertising the above Roofing extensively in the "Farmers' Magazines" and in all cases we ask prospective customers to order our goods from their local Hardware Merchants.

There will be a very large quantity of our Ready Roofing sold in the future, and you can't blame us if you don't get your share of that trade.

75 YEARS *ESTABLISHED 1825.* *75 YEARS*

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

KEMP MANUFACTURING CO., TORONTO, CAN.

AN ENGLISH COLORMAN'S IMPRESSIONS

"CANADA is bound to be a great country," enthusiastically declared Mr. Edward D. Storer, director of Goodlass, Wall & Co., Limited, varnish and color manufacturers, Liverpool, Eng. "I have been greatly impressed with the West, particularly with Winnipeg. It seems a pity that the people in the 'Old Country' did not recognize the possibilities of this land years ago and send out ten times as many men as have come. They would have done far better here than they are doing in England, and would have helped to relieve the pressure over there."

Mr. Storer is homeward bound from a trip round the world in the interests of his firm. The company, who have been in business for over seventy-five years, are among the most strongly established in the world, having built up a wide connection in Egypt, Greece, India, Straits Settlements, Burma, China and Japan, as well as in the principal British colonies throughout the world. The firm's interests in Canada have been for some years represented by R. E. Thorne, Montreal, who met Mr. Storer at Vancouver, and has accompanied him on his trip across the continent.

"There is a wide diversity in business methods," remarked Mr. Storer. "In Canada one can rely on getting an order if his goods and his prices are right. Here connection, though of importance, is not nearly so vital as in the Oriental countries.

"In Egypt, for instance, we have two resident agents at Cairo and Alexandria, one a Greek, the other an Egyptian. These men have a powerful personal influence and connection, so to them and the reputation of the goods everything must be left.

"In India and China the conservatism of the people is one of the great difficulties a firm must contend with in building up trade. On the other hand, when the connection is established it is the easiest trade in the world to hold.

"It may be news to many to know that the City of Liverpool is named after an extinct bird called the 'Liver,' somewhat similar to the heron. We have for many years used this bird as our trade mark, both in foreign countries and at home. This is now the bulwark of our business in all Asiatic countries. An Indian or Chinese native will come into a shop, look about until he catches sight of the label he is so well acquainted with. That is sufficient for him; the bird is to him a guarantee of merit; he cannot read, so he remembers the picture. You may judge how jealously we guard our 'trade mark' rights in these countries.

"Does this apply to all trade in these countries?" questioned Hardware and Metal.

"I should say yes," replied Mr. Storer. "Sometimes it takes twenty years to build up a connection. I know of a soap firm which desired to secure a footing in India. They secured a resident agent of high standing in Bombay, then spent £10,000 ($50,000) in distributing their brand of soap to make it known. This was not considered loss, but rather an investment. Now they have the connection, and will be hard to dislodge. In fact, I understand that another firm, after considering the value of the field and the difficulty of getting a standing in it, have determined to sink £20,000 in building up a reputation there."

"Do you sell the same lines in all countries?"

"No, we must adapt ourselves to various conditions. In Canada we sell almost exclusively the dry materials to the grinders. In India and China we sell, in addition to dry colors, all such lines as mixed paints, oils, varnishes, enamels, zincs, etc. In India there is practically no paint industry; there are no manufacturers, no grinders. In China the developments are decidedly unimportant, though at Canton I saw the vermillion works which have a world-wide reputation, a result of centuries of attention to this line. There is no country in the world that can produce better vermillion than that which comes from Canton.

"In Japan the paint industry has reached a high standard of development, just as has practically every industry in the country. There one will see many paint factories. The Japanese corrode their own white lead and, in fact, supply their own navy with practically everything needed. I was through their shipyards at Kobe and Nagasaki, and found the equipment there modern in every particular.

"It is, by the way, no wonder that the Japanese are winning against the Russians. They deserve to win, and I am convinced they will continue to win until the treaty of peace is signed."

Mr. Storer, since arriving in Canada, has visited Victoria, Vancouver, Winnipeg, Detroit, Cleveland, Chicago and Toronto. He leaves this week for Montreal, and will sail on the 25th inst. for England, after having visited the chief paint and varnish factories, as well as the centres of distribution en route.

One of the most interesting experiences of his trip was his reception at Bombay. When he landed there he was met by the agent of his house, together with about thirty of their customers. They greeted him as if he were a prince, presented him with many bouquets, and finally placed a fine wreath of flowers about his neck, and then escorted him to the carriage in waiting. "This reception," laughingly added Mr. Storer, "was somewhat different from what one might expect in a country like Canada."

"I presume a trip like yours must give you many valuable suggestions," ventured Hardware and Metal.

"Well, yes; we have been in business for over seventy-five years, and employ in addition to a factory and business staff of over 500, several expert chemists. These men are frequently discovering ways to improve the quality of our products, but to keep in touch with our customers in the various parts of the world it is wise to have a member of the firm visit the various agencies. There are many ways in which we must adapt our products to suit our trade. For instance, you sell mixed paints and other

products by the gallon; we sell them by the pound, in 1 lb., 2 lb., 3 lb., 4 lb., 7 lb., and 14 lb. tins.

"Yet while we are keeping in close touch with our foreign agencies we must be on the alert to keep our products up to the highest standard demanded by the British trade. We are paint contractors to the British Admiralty, as well as to other navies, so we must keep up to the mark. The firm doing a world-wide business has a great diversity of interests to consider."

STILL FILLING ORDERS.

THE strike at the Consumers' Cordage Co., Montreal, to which some prominence has been given by the daily papers, has not prevented the company from filling their orders. A considerable quantity of the manufactured product was in stock at the time when the strike commenced and, if necessary, the company can easily obtain supplies from their mill at Halifax. Work was resumed early in the week with a reduced staff, but additions are being made to the pay roll every day and it is expected that the mill will soon be running again at its full capacity. There is very little skilled labor employed in a cordage factory and hence there is not very much trouble in replacing the strikers. In the meantime customers may rest assured that their orders will receive prompt attention in spite of the strike.

CATALOGUES, BOOKLETS, ETC.

For the convenience of its readers HARDWARE AND METAL has opened its columns for the review of catalogues, booklets or other such publications issued by manufacturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. It is requested that when any of the trade write for any booklet mentioned in these columns that they credit HARDWARE AND METAL as the source of their information.

Canadian Westinghouse Co.

THE Canadian Westinghouse Company have just issued several bulletins describing a few of the motors they are placing on the Canadian market. Hardware and Metal has received a number, any of which will be sent to its readers on application to the above firm at their address: Liverpool, London and Globe Building, Montreal. They are: Type H Induction Motors, constant speed; Type F Induction Motors, variable speed; Type C Polyphase Induction Motors, constant speed, and Type S Direct Current Motors.

"Crandall Packings."

The Crandall Packing Co., Palmyra, N.Y., have issued a catalogue giving data (illustrated) concerning "Crandall Packings." Included in the line are the Crandall expansion ring, sectional ring, expansion spiral packing, high pressure ring and coil packing for steam; expansion packing for ammonia, gas and air; combination packing for steam or hot water, piston and valve rod, waterproof hydraulic coil, and hot water packings, air pump and throttle valve packing, tubular gaskets and wire woven helios gaskets, sheet packings, etc.; also boiler compounds, glass tubes and glass preservers, pump valves, rubber belting, conducting hose, etc. Any Canadian firm desiring further information regarding these lines can secure a copy of this catalogue on request.

The Sayer Electric Co.

The Sayer Electric Co., Montreal, have issued an instructive booklet entitled "Illustrated Catalogue No. 20." This

WIRE
Prompt Shipment
The ONTARIO TACK CO.
Limited
HAMILTON, ONT.

catalogue illustrates a large number of electric novelties, and a study of it will give the hardware merchant some valuable suggestions. There are a number of novelties which should prove readily saleable in a hardware store, and every dealer should know about them. Write for a copy, mentioning this paper.

—

Collyer & Brock.

Collyer & Brock are out with two new bulletins, Nos. 101 and 102. One of them describes their Type C Standard Fuse Panel, and the other their electrical repair department, in which they do an extensive business.

—

Munderloh & Co.

The attention of the hardware trade is called towards the handsome new electrical fixture catalogue No. 23 issued by Munderloh & Co., Montreal. The hardware merchant who is looking for ideas in things electrical, ideas that will bring him profits, should write for this catalogue. Munderloh & Co. have a splendid reputation for the quality of their work, and for the striking originality of their designs. Numerous hardware merchants are handling their lines with good success. This is a valuable catalogue, and every dealer should have one. Write for it, mentioning this paper, and a copy will be mailed promptly.

——

The Iron Age Directory.

The eighth annual edition of the "Iron Age Directory," a classified index of goods manufactured by advertisers in the Iron Age, issued by the David Williams Co., New York, has just come to hand. This work is recognized as one of the most valuable directories of hardware, metal and machinery manufacturers in the United States, and should be in the reference library of every Canadian importer of these lines. The price of the book is 25c, copies being supplied from the head office of the company, 232 William street, New York.

——

"Notes on High Speed Steel."

J. Beardshaw & Son, Baltic Steel Works, Sheffield, England, have issued an interesting booklet entitled "Notes on High Speed Steel," a copy of which has been furnished Hardware and Metal by their Canadian representative, Alexander Gibb, 13 St. John street, Montreal.

Rugs and painted or varnished floors are the style now. The day of the dust and germ collecting carpet is past.

THE SHERWIN-WILLIAMS FLOOR FINISHES

FOR FINISHING OLD AND NEW FLOORS IN ANY STYLE DESIRED

are the best and most profitable for both dealer and user. No other floor finishes are so well advertised, give so much satisfaction and pay the dealer such good, permanent profit. The line comprises:

THE S-W. INSIDE FLOOR PAINT—For an effective inside finish.
THE S.W. PORCH FLOOR PAINT—A lasting outside floor paint.
FLOORLAC (registered)—A high gloss stain imitating natural wood.
MAR-NOT—A tough, elastic varnish.
THE S-W. FLOOR-WAX—For easy and "glassy" polishing.
THE S-W. CRACK AND SEAM FILLER—For filling seams and cracks in floors.

If you want the best and the most of the floor finish trade in your territory, stock up with one or more of the S-W. Floor Finishes now. Send for booklet and prices today.

THE SHERWIN-WILLIAMS CO.
PAINT AND VARNISH MAKERS
CANADIAN DIVISION
HEADQUARTERS AND PLANT: 21 St. Antoine St., Montreal.
DEPOTS: 86 York St., Toronto, and 147 Bannatyne St. E., Winnipeg.
E1193

The booklet contains reports of various interesting tests of this company's "Conqueror" brand of high velveitz steel, reference to some of which was made in a recent issue of this paper. As noted then, these tests indicate that the "Conqueror" brand of high velocity grade. Statistics of the results of comparative tests given in this booklet should interest all users of high-grade tool steel. An interesting feature of the booklet is a series of instructions for working this brand of tool steel. These concise and yet complete instructions relate to forging, tempering and grinding. Write for a copy to Alexander Gibb, 13 St. John street, Montreal.

—

John Forman.

Recognizing the big field which the hardware merchant has in electrical fixtures, John Forman, Montreal, has issued a catalogue specially intended for the hardware merchant. A selection has been made from the extensive stock of this big electrical supply house of goods which the hardware merchant can profitably handle with the least trouble. The difficulty which many a hardware merchant will experience who desires to add an electrical department to his stock in trade is the selection of lines suitable to his own trade. This problem has been wrestled with by John Forman for the benefit of hardware merchants, and the result is their catalogue specially prepared for the hardware trade. Every hardware merchant should have one of these catalogues. It is full of suggestions that may bring profits. Write for one, mentioning this paper.

Ramsay & Philip, general merchants, Gilbert Plains, have been succeeded by McCormick & Philip.

Business Changes

ONTARIO.

RUSSELL & NELSON, general merchants, Erin, have dissolved partnership; D. C. Russel continues the business.

The Burley Gold Mining Co., Ottawa, have dissolved.

J. W. Crawford, planing miller, Durham, has been burnt out.

W. H. Kennedy, planing miller, Omemee, sustained a loss by fire.

J. Finlay & Son's hub and spoke factory at Tweed has been burnt.

J. J. White, planing miller, Wheatley, has sold out to R. Ivison.

M. H. Quinlan, harnessmaker, Peterboro', has sold out to A. Sinnott.

E. Braund, hardware merchant, Aurora, has assigned to A. E. Taylor.

G. Fitzgerald & Co., carriage makers, Peterboro', sustained a loss by fire.

J. W. Johnston, wagon maker, Hensall, has sold out to W. J. Miller.

The Skinner Co., Gananoque, saddlery hardware merchants, have been burnt out.

Hatch & Bros., hardware merchants, Whitby, have advertised their business for sale.

McDowall & Co., dealers in sporting goods, Toronto, have assigned to N. L. Martin.

J. O. Stringham, dealer in builders' supplies, has sold out to A. Hastings & Son.

An extension has been granted Welford Bros., rope and broom manufacturers, London.

Burke Bros., barrel manufacturers, Lindsay, have sold out to the Rider & Kitchener Co.

A meeting of the creditors of the W. J. Bradley Machinery Co., Toronto, was announced to take place on May 13.

The stock of Sanderson & Rossiter, brush manufacturers, Toronto, has been damaged by fire; insurance covers all losses.

The style of the Empire Machine & Metal Stamping Company, Toronto, has been changed to the Stanyon Metallic Furniture Co.

QUEBEC.

Vachon & Guay, painters, Quebec, have registered.

J. Cauchon & Frere, joiners, Quebec, have dissolved partnership.

IVER JOHNSON REVOLVERS

IVER JOHNSONS ARMS AND CYCLE WORKS. HONEST GOODS AT HONEST PRICES FITCHBURG, MASS.

IVER JOHNSON'S ARMS & CYCLE WORKS,

New York Office, 99 Chambers Street. FITCHBURG, MASS.

L. Cote, general merchant, Cavignac, has been succeeded by H. Cote.

G. F. Foss, machinist, Sherbrooke, has sold out to A. H. Bartlett.

Brunet & Desjardins, brick manufacturers, Montreal, have registered.

J. Roi & Sons, general merchants, Otter Lake, have been succeeded by J. H. Roi.

The assets of F. Galipeau, general merchant, Weedon, are to be sold on May 19.

The assets of J. L. Roberge & Co, general merchants, Thetford Mines, were advertised to be sold on May 11.

PRINCE EDWARD ISLAND.

R. Ellis, general merchant, O'Leary, has been succeeded by Ellis & Kennedy.

NOVA SCOTIA.

J. R. Francis & Co., hardware merchants, Sydney Mines, have dissolved partnership.

A. E. Stoneman & Co., general merchants, Yarmouth, have assigned for the benefit of their creditors.

MANITOBA AND N.W.T.

A. J. Nybert, general merchant, Burnt Lake, has sold out to O. Nelson.

W. A. S. Magrath, general merchant, Theodore, has sold out to A. W. Wylie & Co.

W. J. Stinson, general merchant, Austin, has sold out to Wheeler & Duncan.

Earl & Wolfe, hardware merchants, Olds, have admitted R. T. Earl as partner.

W. N. Trimble & Co., pump makers, Strathcona, have sold out to R. Turnbull.

Card & Fenwick, hardware merchants, Westwood, have been succeeded by W. B. Puddicombe.

Bentley & Humberstone, planing millers, Medicine Hat, have been succeeded by Luno & Wilson.

Reed & Slough, general merchants, Didsbury, have been succeeded in business by Reed & Mowers.

The stock of the estate of H. Collins, general merchant, Methven, has been sold at 68c on the dollar.

Carruthers Bros., general merchants, Creelman, have dissolved partnership; S. R. Carruthers continues the business.

BRITISH COLUMBIA.

Summerland Sawmill Co., Summerland, have sold out to J. Huntley.

Blair & Hadden, general merchants, Cloverdale, have sustained a loss by fire; insurance covered the loss.

MACHINERY

THE MACHINERY MARKETS.

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, May 13, 1904.

NOTHING startling has taken place in the machinery market within the past week. There is a decided improvement in all lines, however, with the prospects better and the outlook brighter than they have been for some time. The stimulus given to business and trade conditions generally by the agreeable change in the weather is not without its effect on the machinery market.

Small orders are coming in steadily and several lrage sales are reported this week. These include orders for wood working machinery for factory equipment, several boiler insulations, and electric motors and turbine pumps for three Canadian towns. The dealers are viewing with pleasure the immediate prospects of work being commenced on the new Grand Trunk Pacific. This will mean extra requirements of heavy machinery all along the line, as well as complete machinery outfits for saw mills and water power development.

Deliveries are vastly easier than last year owing to the fact that manufacturers have been able to overtake their orders on account of the recent depression. There are not so many enquiries coming in as formerly. While some dealers claim more business than a year ago, the general impression is that it is hardly as brisk; but on the whole business may be said to be good.

Ontario.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, May 14, 1904

A GENERAL improvement in the situation is reported. Many enquiries for engines and boilers have been received and several good orders have been booked during the week. Business in iron-working machinery is also satisfactory, the enquiries regarding lathes, drills and planers being especially active. While there is not any particular movement in wood-working machinery the orders for this line are fully up to the average.

For electrical supplies, notably electric motors and generators, the demand continues fairly active, several good contracts having been awarded during the week.

Women and Machinery.

A MIND for machinery is undoubtedly, for women, the sixth sense. It is safe to say that most women have no more definite idea of what makes a cable car go than why the electric light turns on or the telephone rings. They very properly answer that they do not run cable cars or inspect telephones; but, though they may ride on cars and call up central without being able to explain mechanism, they cannot run a motor without being absolutely familiar with every little thread and wire of the machine. This necessity is formidable indeed to a woman who cannot understand why men gather in the street to watch the erection of a steel-constructed building. But formidable or not, she must master her machine.

There is a story of a man who had virtually acceded to the plea of his wife that he buy her a car of her own, when this point occurred to him, and he reviewed with some alarm his wife's inability to mend the lid of her inkstand, or the clasp of her handbag, which, he recalled, only needed bending the other way. He confided his doubts to a friend, who advised him.

"Why, maybe she has never had any sort of machine explained to her," said the friend. "Perhaps she would find it all very simple. Why don't you try explaining to her the principle of the steam engine or the trolley? If she follows that she'll understand any machine."

So the man did. Over the library table that evening he drew plans and made signs and exhibited wonders. Presently he worked out for her the reason that a steam engine "goes." And when he had finished she said:

"Yes, dear. And I never understood before how just that apple falling from the tree could have suggested it all to him."

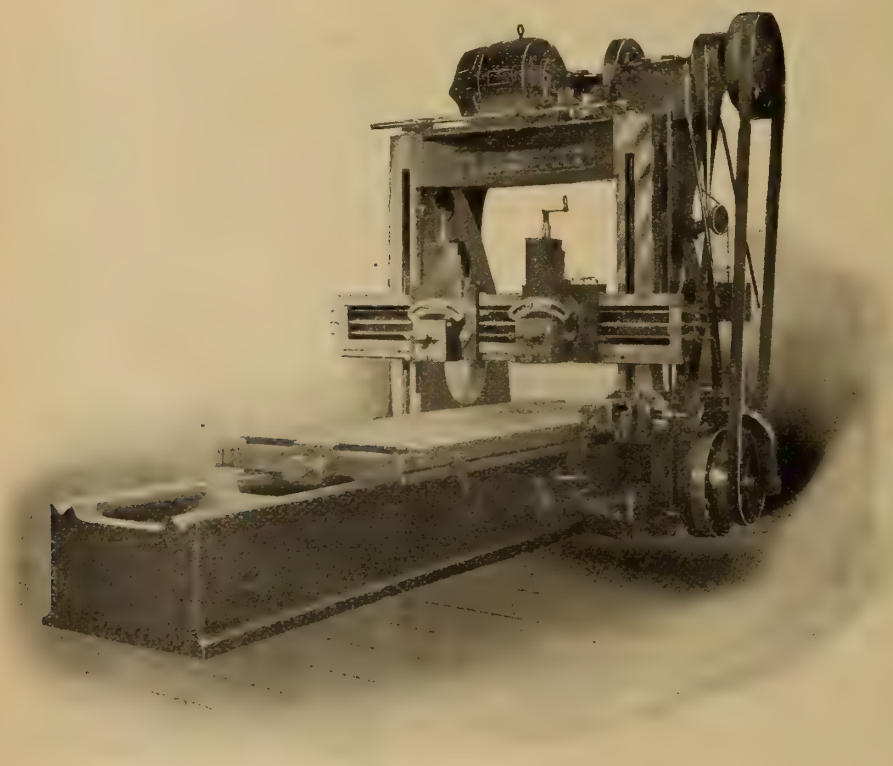
Some minds are made for machinery; some acquire it; but it can be thrust upon nobody; and it ought not to be tried. Yet a woman of intelligence to whom machinery is difficult, can usually master the mechanism of her motor if she sets about it. She must set about it if she hopes to take the road alone. So long as she is frightened by any unexpected refusal of any part of the machine to work, or by any strange noise of the gearing, so long she will be liable to accident.—May Outing.

High Speed Machine Tools.

There is a revolution going on at the present time in machine tool building to meet the demand required by high speed steels; and the ingenuity of the designer is taxed to its utmost. The Engineering Review gives an account of a new lathe of British manufacture on which the innovations are striking, and which shows a determination on the part of the builders to meet the requirements thrust upon them by the advent of new steel, and the demand for the machines that can utilize them to their utmost capacity. A heavy high speed 14-inch lathe is described. It possesses all the essential features of a first-class double geared lathe mounted in a particularly rigid bed. The fast head stock is driven by a constant speed belt 7 inches wide, running on pulleys 30 inches in diameter. The cutting speed is 100 ft. per minute, arranged through twelve changes of gears, from two and a quarter up to 14 inches in diameter, advancing in geometrical progression. The reduction gear may be similarly employed for changing down to a speed of twelve and a half ft. per minute, when required for a finishing cut, or when operating on harder material. Between the driving pulley brackets, the space is provided for electric driving, if desired, by the substitution of a motor of about 30 horse power. The whole of the gears are machine cut and the front neck bearing 7 inches in diameter, both of which constitute excellent features in a heavy lathe. The feed one-quarter inch per revolution makes the machine specially applicable for roughing-out purposes, whilst the reduction gear provides for accurate finishing.

CINCINNATTI MOTOR DRIVEN PLANER.

THE accompanying half-tone illustrates a new motor driven planer having a variable speed cutting stroke, with a uniform return at all times, and using a constant high-speed standard motor, made by the Cincinnati Planer Co., and sold by H. W. Petrie, Toronto. The engraving shows how the power is transmitted from the motor to the rear or constant speed shaft by a pair of gears, one of which is rawhide to obviate noise. This first or constant speed shaft carried the return pulley, and therefore gives the table always one speed for the return stroke. On this shaft is also mounted a heavy fly-wheel, to relieve the motor at the reverse, which is placed between two bearings, all of which are made ring oiling. The pulley for the cutting stroke is placed on a separate or forward shaft on top of the housing, and power is transmitted from the constant shaft to this one by two trains of gearing, each giving two speeds to the platen by simply moving one or both of the two levers shown on the side of planer. The changes can be made while the machine is in operation or standing idle.



A Cincinnati Motor Driven Planer.

This makes an ideal drive, especially for large machines, when it is desired to place them under the crane or where there is no room overhead for any style of variable speed countershaft; and it also overcomes the two chief objections to a planer driven by a variable speed motor, which reduces the power on the slow speed and runs the return speed far beyond its limit when a high cutting speed is desired. Variable speed motors are rarely carried in stock, and must therefore be ordered specially, which usually means a long wait, not only for the new motor, but also for any repairs should they be needed later on. The cut illustrates a 48x48 inch planer, but this same style drive has been applied to all other sizes of machines which the Cincinnati Planer Co. manufacture.

The speeds used on the machine illustrated were arranged for 20, 25, 30 and 38 feet per minute, with a constant return of 72 feet. A brass index plate is fastened to the side of housing, not shown in cut, so that a glance will tell what speed is being used.

Machinery at St. Louis Fair.

THE Louisiana Purchase Exposition has been officially opened, but as is usual in such large undertakings, the number of exhibits completed and fully ready for inspection are few. A correspondent of the American Machinist makes a few remarks in the last issue of that journal which may prove interesting to Hardware and Metal readers. He says that only here and there is an exhibit which is complete. In the Palace of Varied Industries the only exhibit that is practically complete is that of the Japanese. In the Transportation Building the historic exhibit of the development of the locomotive is complete and is very interesting, but for the most part the space is void.

In the Machinery Building the power plant is well advanced, and most of the engines have been in operation. There is a good showing of foreign boilers, but foreign engines will be scarce. The machine tool exhibit will not surpass even if it equals that of Buffalo. Not many tools will be seen in operation. Reed, of Worcester, will operate no tools; Warner & Swasey will operate only one; Brown & Sharpe will not exhibit any machine tools. The Niles-Bement-Pond Co. are installing a number of very heavy tools, and will probably operate them. The exhibit of Pratt & Whitney tools is well advanced.

Because of a change of plan or the misunderstanding regarding the charge for power has had the unfortunate result of leading many machine tool builders, especially the Cincinnati firms, to exhibit in the Electricity Building, or rather to supply their tools to be exhibited there by motor builders, who will show the tools in operation in order to show the beauties of electrical drive, and those tool builders will have none of the ordinary expenses of exhibitors to meet.

Exhibitors are having considerable trouble with contractors and workmen. The unions are not living up to their agreement with the exhibition, and workmen are demanding exorbitant rates of wages.

The Robb Engineering Co., of Amherst, N.S., have taken a contract for a 300 h.p. Robb-Armstrong engine for direct connection to a Stanley generator for lighting a large Cuban sugar plantation.

The huge new departmental store of John Wanamaker, New York, will be equipped electrically throughout, and will have one of the most elaborate isolated electric lighting plants in the country. The plant will be a three-wire one, with a capacity of 1,800 k.w. The store will be illuminated by 1,700 arc lights and 6,000 16 c. p. incandescent lights. The plant will entail an expenditure of $200,000.

MACHINERY AND ELECTRICAL NOTES.

COLLYER & BROCK, electrical contractors, of Montreal, have finished the electric installation of the new Imperial Bank building, Westmount, which includes complete wiring, switch and panel boards, fixtures and a Fensom elevator. They are now wiring the new Scroggie building and the McGill Conservatory of Music with enclosed iron conduit wiring throughout.

Sheppard Bros., Toronto, are installing a boiler from H. W. Petrie in their new premises.

The business of the American Electrical Novelty Co. for Canada has been taken over by John Forman, Montreal.

St. Michael's College, Toronto, are installing a laundry plant and have purchased new engine and boiler from H. W. Petrie.

The Canada Sugar Refining Co., Montreal, has taken out building permits for an electric station on Montmorency street to cost $450, and a pump house on Canal street to cost $1,200.

The Gould Storage Battery Co. are putting in a large storage battery in the new Bank of Montreal, so that it will be necessary to run the machinery only part of the time.

In the list of recent patents granted by the Canadian Government was one for a sulky plow to Mr. Albert Baldwin, and a threshing machine to Mr. F. Whitcomb, of Smith's Falls, Ont.

Hardware and Metal is informed through reliable sources that the Marconi Wireless Telegraph Co. will be in active operation and doing business on an extended scale in less than four weeks' time.

H. W. Petrie, Toronto, has during the last few days delivered a double cylinder, double drum hoisting rig to the Joseph Battle Estate, Thorold; several iron-working tools to Wm. Preston, Galt; a large veneering machine for W. Moses & Son, West Osgoode, Ont.

One of the largest electrical contracts under consideration in Canada to-day is the new Canadian Pacific hotel and station at Winnipeg. This building is to be installed with the most modern apparatus. The contract has not yet been given out.

John Forman, of Montreal, has just completed furnishing the transformer equipment for the Marconi Wireless Telegraph Co. He has supplied all the transformers used both for the Glace Bay and Cornwall stations. They are the Imperial make.

The Robert Mitchell Co., Ltd., brass and iron founders, of Montreal, have moved their factory from Ste. Cunegonde to St. Henri, and are now running full blast. They have recently installed some new machinery, and now have one of the most up-to-date factories in Canada.

The Private Bills Committee of the Quebec Legislature has passed the bill to incorporate the Canadian Light, Heat and Power Co., to furnish heat, light and power in Montreal, despite the opposition of the Montreal Light, Heat and Power Co.

The Locomotive and Machine Company of Longue Pointe, is in receipt of an order from the Grand Trunk Railway for ten mogul engines, to cost about $20,000 each, to be followed, when they are delivered, by ten more, which are to be finished before the end of the season.

Alfred Rubbra, of the Machinery Exchange, Montreal, has been appointed agent for E. Imhauser & Co., New York, who manufacture watchman's improved time detectors. These are for use in factories and warehouses where a number of men are employed.

The Singer Manufacturing Co., of Elizabeth, N.Y., are about to build a large new plant in Canada. They are to instal in it a large electrical equipment. The machinery will include a 600 k.w. geerating set and some 200 h.p. of motors ranging from one h.p. to five h.p. each.

The Montreal Rolling Mills Co., who have made a number of improvements at their works on Notre Dame street west, Montreal, have just completed and taken possession of a new large office building at the west end of their works. The new building is a splendidly equipped one, and contains the offices of all the officials of the company.

Among the latest patents reported in connection with the telephone is an antiseptic device for telephone transmitters. It may be carried in the pocket, and differs very little in size and shape from a watch. Another is a compact receiver and transmitter deskstand. By removing a single screw the tubular upright may be slipped down over the cord, entirely exposing the working parts.

The Canadian Westinghouse Electric and Manufacturing Co., of Hamilton, have been given the contract for lighting the Welland Canal. It includes complete arc lamp and switch board installations. About 600 A C enclosed arc lamps are to be put in. The contract for the motor installation has not yet been let. The same company are now working on the new Bank of Montreal service plant, which includes engines, generators and switchboards.

Germany has now forged ahead of Great Britain in the production of iron and steel. In 1903 the estimated production of pig iron in Great Britain amounted to 8,350,000 tons. Germany in that year produced 10,085,634 tons. In 1903 Germany exported 3,480,000 tons of iron and steel, against 3,571,373 tons exported by Great Britain. In three items alone—angles, blooms and rails—the German exports to the United Kingdom reached 607,649 tons in 1903.

The creditors of the W. J. Bradley Machinery Company, Toronto, meet at the offices of the asignee, E. R. C. Clarkson, on Friday afternoon. The liabilities are placed at $9,500, and the assets at $8,000. E. R. C. Clarkson, as assignee for the firm, has issued a writ against Peter Paterson and M. J. Evans to set aside a mortgage dated April 15, 1902, on some property on Shaw street.

The Canadian Westinghouse Company, Limited, of Hamilton, have engaged C. C. Starr, who was formerly connected with the firm of John Starr, Son & Co., Montreal, to act as their representative in the Maritime Provinces, with headquarters at 134 Granville street, Halifax. The Maritime Provinces are included in the district of the Canadian Westinghouse Company's Montreal office, and Mr. Starr will be consequently an attache of that office.

One of the features under consideration for W. H. Scroggie's new departmental store in Montreal is an escalator. This is a moving stairway that has been used with such success in large stores in New York and other cities. The steps are carried on a track connected by levers so arranged that they are always in a horizontal position. On the landing a triangular buffer gently pushes anyone who is not inclined to step off, to one side. Immediately opposite is the descending stairway, which is kept in motion all the time. Thus hundreds may be carried up and down continuously. One of these escalators in practice has been found to do the work of fourteen elevators.

German Machine Industry.

THE machine industry of this Empire was never in worse condition than at present. The building of steam engines, which has always been looked upon as a basis of all machine building, is on the decline. Two reasons are given for this decline—first, the great depression in industrial life all over the Empire, and, second, the enormous strides in the use of gas engines and steam turbines within the last few years. The gas engine has worked its way into industrial life here to such an extent that the builders of steam engines are at a loss to know just what to do. With the depression in the steam engine trade, naturally the steam boiler has had to suffer.

During the year 1893 Germany exported 95,958 tons of machinery, while in 1903 she exported 255,383 tons. It is interesting to note the change in position the nations have taken toward Germany as receivers of German goods. In 1893 Austria-Hungary stood in first place as receiver of German machinery; to-day she ranks third, while Russia has taken first place. The export to England has increased sixfold and she has risen from the ninth to the fourth place as a taker of German machines. The German machine export to Italy and France has increased nearly threefold, while the export to Switzerland has advanced nearly 30 per cent. in ten years.

Germany's importation of machinery in 1893 amounted to 40,889 tons; in 1903, to 61,008 tons. During this period England's export to Germany has steadily decreased, while the exports from the United States have continually increased.

The American increase was due almost entirely to the German demand for agricultural machines, and in this line the American product almost dominates the German market.

Roumania is about to increase her duty on machines from $2.32 to $3.09 per 100 kilograms (220.46 pounds). This will be a severe blow to the German agricultural machine exporters.

The Laurie Engine Co., Montreal, have just completed several of their larger Laurie-Corliss engines. One of these a 1,500 h.p. horizontal cross-compound 26 in. and 48 in. by 48 in. heavy duty engine weighing 300,000 lbs., has just been installed in the Toronto Street Railway plant, where they intend putting in another of the same capacity in the near future. They have shipped to the Winnipeg Street Railway Company another engine of this size which is the same as was placed in the Montreal Street Railway power house three years ago.

CONDENSED MACHINERY ADVERTISEMENTS.

MACHINERY WANTED.

Notices under this heading inserted free for subscribers to HARDWARE AND METAL.

BAND saw, jig saw and jointer. Box M. 7, HARDWARE AND METAL, Toronto.

BOILER WANTED—Good second-hand boiler —54 x 12, or 60 x 12; quote lowest cash price. Box M. 8, HARDWARE AND METAL, Toronto.

GOOD second-hand three-side moulder and iron rip saw table; give full particulars Otterville Manufacturing Co., Limited, Otterville.

LATHE, screw-cutting, about twelve-inch swing; must be in good order. Box M. 10, HARDWARE AND METAL, Toronto.

SMALL foot-power printing press, state price and where can be seen. Box M. 9, HARDWARE AND METAL. Toronto.

WANTED—Second-hand gasoline engine—in good repair; 2 to 4 horsepower. Box 8, Markham.

WANTED—A diamond stone dresser. Any miller or mill machinery firm having one for sale, either new or second-hand, will please write The Alabastine Co., Limited, Paris, Ont.

WANTED — Immediately—Portable sawmill— to cut from three to five million feet mixed timber, principally birch; would prefer party who would take timber from stump and deliver lumber at station. Hanna & Hutcheson Bros., Huntsville, Ont.

WANTED — Good second-hand jointer and rounder. E. McNabb, Arva P. O., Ont.

MACHINERY FOR SALE.

Special rates will be quoted for notices under this heading for periods of three months or longer.

BLACKSMITH'S tools, stock and woodworking tools in first-class shape. Apply G. H. Morris, Hatchley P. O.

COMPOUND engines—high and low pressure; high speed, John Ingles, maker, Toronto, 125 horse power; also alternating, incandescent dynamo, five hundred light; all in first-class condition; lately used in Grimsby electric light plant, now using current from Cataract Power Company, and engine and dynamo are no longer required. Apply to J. W. Vandyke, Grimsby, Ont.

ENGINES—Gas, gasoline, stationery and marine. E. Housey, manufacturer; 815 Queen west, Toronto.

ELEVATORS for freight and passenger service. Write for particulars to Parkin Elevator Works, Hamilton, Ont.

ESTIMATES given on forced and induced draft fans for steam plants. Sheldon & Sheldon, Galt.

FOR engines, boilers, iron and woodworking machinery write H. W. Petrie, Toronto.

GAS and gasoline engines, stationary, marine, automobile; also launches; silver medal, highest award Dominion Exhibition, Toronto; also Toronto Exhibition, 1902; write for catalogue. The Gasoline Engine Co. of Toronto Junction, Limited.

HEAVY portable engines—21 to 50 h. p.; on wheels or skids; for sawmill work; prompt delivery; low prices; send for catalogue. The Robert Bell Engine and Thresher Co., Limited, Seaforth, Ont.

HOISTING ENGINES. derricks, continuous concrete mixers, 250 yards capacity; dump cars, railway construction cars, track-laying tools, boilers, etc. Marsh & Henthorn, Belleville, Ont.

MACHINE TOOLS—I have for immediate delivery a large stock of lathes, planers, shapers, millers, radial and other drills, punches and shears, bolt cutters, hammers, presses, etc., etc.; send for stock list. H. W. Petrie, Toronto.

PATENT, well introduced; big money to live man acquainted with machinery or mechanics. Fred. R. Cole, 138a St. James street, Montreal.

ROCK DRILLS for waterworks excavating, quarries and mines; steam hoists for builders, mines and quarries; simple, compound and triple marine engines, for pleasure launches. The Dominion Rock Drill Co., Napanee, Ont.

SIX horse-power engine and boiler, cheap; three horse gas engine, seen working. 102 St. Lawrence street, Montreal.

THE A. R. WILLIAMS MACHINERY CO., Limited, Toronto, have for sale for prompt shipment the following; Two 10" four side moulders, new; 42" new sand papering machine; new 40" Cowan resaw machine. Send for prices.

THE FAIRBANKS CO. — Temporary warehouse, 124 Bay — standard scales, valves; trucks, letter presses, shafting, hangers, pulleys belting, mill supplies, machine tools; "Fairbanks" gas and gasoline engines; write for price list.

THE STUART MACHINERY CO., Winnipeg—One second-hand return tubular boiler, 60" x 14 feet, good as new; one 12x30 Corliss engine, second-hand, John Abell make, in first-class shape; one second-hand Barnes 19 inch swing, 8 foot bed, iron lathe, foot power; one second-hand iron lathe, 24-inch swing, 10 foot bed.

AN IMPROVED RADIAL DRILL.

RADICAL changes have taken place, in the past few years, in the standard of construction of radial drills. In order to keep fully abreast of the changed conditions and greatly increased duties now confronting the radial drill, the American Tool Works Co., of Cincinnati, have just re-designed throughout their line of radial drills, taking into account every condition influencing modern radial drill work, and every point which would tend to increase their efficiency. In the accompanying illustration is shown their new "Improved Plain Radial Drill," which can be furnished with 4 in., 5 in., 6 in. and 7 in. arms. A feature of unusual excellence on this new drill is the feeding mechanism in the head, an entirely new and original construction. It provides eight distinct rates of feed to the spindle. These feeds are all obtained by the simple turning of a dial shown on the feed box, until the desired feed indexed thereon comes opposite a fixed pointer. This method is an extremely simple one, as it requires no reference to index plates and subsequent handling of levers. The feeds operate through a friction, which permits a drill being crowded to its limit without strain to the feed works. A plate is provided indicating twist drill sizes, from ½ inch to 3½ inches inclusive, and their respective proper feeds, and this, in connection with the dial index, enables the operator to immediately secure the proper feed for the twist drill he is using. This involves no guess work, saves a great deal of time, and insures the drill being used to its full capacity. Feeds can be automatically tripped at any position of the spindle by adjustable trip dog and pointer, acting on the worm clutch. Depth graduations are on the spindle and all depths can be read from zero. Two or more dogs can be supplied, making it possible to counterbore any number of holes without resetting. The trip acts automatically at full depth of spindle, preventing breakage of feed mechanism.

The speed box is of geared friction type, providing four changes of speed, each being instantly available by use of the two levers shown. Frictions are of patent double band type, employing very few parts in their construction, which can thus be made of such large proportions as to be free from slippage under the severest cuts, and obviating the use of loose delicate parts. A motor of any type may be readily attached at any time, connection being made through chain, gear or belt. The speed box can be easily interchanged with a cone by simply breaking a coupling connection on the lower driving shaft of the machine.

The spindle has sixteen changes of speed, all immediately available without stopping the machine. This wide range of spindle speeds, combined with the exceptional driving power of the machine, renders the drill equally efficient with either ordinary or high speed twist drills. The column is of double tubular type. The outer column is practically integral with the inner column, which extends the entire height and has full bearing for outer column, at both top and bottom. This gives the equivalent of a double column, affording exceptional rigidity. The arm is parabolic beam and tube section, giving the greatest resistance to bending and torsional strain. Its design leaves the lower line parallel with the base, and thus permits work being operated upon in close proximity to the column without the necessity of an extreme reach of spindle. Arm is raised and lowered rapidly by a double thread coarse pitch screw hung on ball bearings and controlled instantly by a convenient lever.

Back gears are located on the head, thus bringing the greatest speed reduction direct to spindle. They may be engaged or disengaged without shock or jar while the machine is in operation. Spindle is counterbalanced and has frictional quick advance and return.

Tapping mechanism is carried on the head, between the back gears and speed box, thus giving to the frictions, already very powerful, benefit of the back gear ratio, making unusually heavy tapping operations possible, and also permitting taps to be backed out at an accelerated speed. The lever for starting, stopping or reversing the spindle is controlled at the head from the front of the machine. Further particulars will be cheerfully furnished by the makers.

ELECTRICAL GOODS AND SUPPLIES

A NEW DEPARTURE.

WITH this issue, Hardware and Metal commences a new department devoted to electrical goods and supplies. It is a department which the management have had in view for some time, and it is in line with the development of the trades with which this paper is connected. Most progressive plumbers are already handling electrical fixtures and they will be interested in a new department devoted to this growing branch of their business. Many hardware merchants are commencing to sell electrical goods, and they have found it profitable to do so. The object of this new department is to afford some assistance to those plumbers and hardware merchants who are already selling electrical goods, and to interest others in the development of a profit-bringing business.

Every reader of Hardware and Metal is familiar with the policy which, in and out of season, has been persistently urged in this paper—add new lines to your business. Profits in staples have been cut down to almost nothing. The hardware merchant who is in business for profit, as well as for his health, will not devote all his energies to selling nails and kindred staples in which long competition has eliminated profit. He will turn to other lines in which competition is not so keen. In the expansion of the retail hardware business along new and profitable lines lies the hope of the future.

To come to the point: there is probably no line of goods more easily sold and in which profits are better than electrical fixtures and supplies. Every town in Canada—almost every village of any pretentions—has its electric lighting plant. This means business for some person, and to the hardware merchant and plumber much of it legitimately belongs. Trade in supplies should not be monopolized by the electric light companies, and the hardware store could easily secure it.

There is much in electrical goods that is as staple as wire nails, but much more profitable; and there is also very much that is fancy on which better profits can be obtained. The alert hardwareman will not be content with a trade in plain incandescent lamps. He will add to his stock fancy lamps and fancy fixtures in which it should be easy to interest his customers.

Fancy lamps and ornamental fixtures should do much to attract the ladies to the hardware store, which has too long been regarded as exclusively a men's store. The possibilities which this offers for trade expansion need not be enlarged upon. Every thinking merchant knows that the ladies are the wealth distributors of the country, and no plan should be neglected which will attract them to the store.

It is intended that this department shall assist the hardware merchant by pointing out to him from time to time lines which he may handle profitably. To this end the co-operation of the electrical supply houses is invited. Suggestions will be welcomed at any time.

Note reference to electrical goods under Catalogues, Booklets, Etc., heading on another page.

Murray Bay Power Plant.

THE power of the Murray River, which empties into the St. Lawrence at Murray Bay, is about to be utilized to some extent. This river has its source in innumerable lakes, back as far as Lake St. John, so that the supply is inexhaustible. The company developing this is the Labrador Electric and Pulp Co. They intend supplying power and light to Murray Bay, Point a Pic, Cap A L'Aigle and St. Irenie, and to several large saw mills on the road, but will not take up the pulp industry at present.

Last October work was commenced on the dam which is of crib work. It is now completed and has several inches of water flowing over it. The dam is 26 ft. high and 140 ft. long. Later work was begun on the canal leading to the power house. It is blasted from the solid rock and is 19 ft. deep, 11 ft. wide, and 200 ft. long. The men worked at this under most trying circumstances during the severe Winter, with the thermometer at times as low as forty degrees below zero. An enclosed circular steel and wood penstock is being placed in the canal and will be completed in a short time. The power house is to be a two-storey concrete building, the upper storey for the attendants' quarter, forty by sixty ft. The installation will consist of two 5,000 volts 150 k. w., S. K. C. alternators, belt connected to two Morgan and Smith, McCormick turbines 36 in. in diameter, of 300 horse power each. The switch-boards, of blue Vermont marble, are being supplied with general electric apparatus. The high tension board contains the fuses, oil switches, and paralleling switches, and the low tension board has an A. C. voltmeter and ammeter and D. C. field ammeter for each machine, and a synchronizing device, besides the rheostatic control apparatus. The energy is generated and transmitted at 5,000

volts, the greatest length of line being 14 miles from the power house to St. Irenie. Two three phase transmission lines are being installed, consisting of number three B. & S. copper wire. Cedar poles forty feet high are used, and the cross arms are of Southern pine, creosoted and mounted with locust pins and Lachine type glass insulators. A special Stromburg anchor is called for for the poles.

The whole is to be completed and ready for active operation by July 1.

The company has the contract for lighting the four municipalities mentioned, as well as the Government wharves, with 32 candle power lamps. 100 kilo-watt in power and lighting will be taken by the Manoir Richelieu, owned by the Richelieu & Ontario Navigation Co., at Murray Bay, and 30 kilo-watt for the Summer home and grounds of Rudolph Forget, of Montreal. The latter grounds will be lighted by both arc and incandescent lamps and have motors for pumping water.

The contract for the entire plant from dam to transmission line is in the hands of the Standard Constructing Co., represented by Messrs. Albert Dupuis and Leon Beauchamp, of Montreal.

The Allis-Chalmers-Bullock Limited.

THERE has just been formed in Canada one of the strongest electrical and machinery companies that has ever been established in this country.

A few months ago there was a flurry of excitement in machinery circles in the United States, due to the fact that the Allis-Chalmers Co., of Milwaukee and Chicago, one of the largest machinery firms in the world, had amalgamated with the Bullock Electric Mfg. Co., of Cincinnati, manufacturers of all kinds of electrical apparatus. It was rumored at the time that this action had been taken by the Allis-Chalmers people because of the moves the large electrical concerns, notably the General Electric Co. and the Westinghouse Co., had made in entering the steam engine and steam turbine field. This union made a particularly strong combination. At that time there had already been established in Canada a Canadian Bullock Co., a distinct organization from the American Co., yet intimately connected with it, with Geo. Bullock as president, for the manufacture of electrical apparatus and to compete with the established branches in Canada of the large United States companies. The change in business and the amalgamation referred to, meant an opportunity for expansion in Canada as well.

The new company just organized is to be known as the Allis-Chalmers-Bullock Limited, with head offices and works in Montreal, and branch offices in Toronto, Winnipeg, Halifax, Vancouver and Rossland. They have taken over the business and representation in Canada of the Bullock Electric Manufacturing Co., the Canadian Bullock Electric Manufacturing Co., Limited, the Allis-Chalmers Co., the Ingersoll-Sergeant Drill Co., the Lidgerwood Manufacturing Co., the Wagner Electric Manufacturing Co., and the Canadian Engineering Co., Limited. They will operate in closest relations to the American companies and manufacture machinery identical in design and of the same high-grade material and workmanship. They have taken over the works of the Ampere Electric Co., and the new works of the Jas. Cooper Co., at Rockfield, for immediate operations. They are now building new works of the most modern design and equipment, and will employ several hundred men in a short time. The lines to be carried and manufactured by this company include direct and alternating current machinery, railway equipment, arc lamps, switch board apparatus, transformers, rock drills, air compressors, pneumatic hammers and riveters, hoisting engines, cable ways, log hauling machinery, boilers, Corliss engines, piston and centrifugal pumps, water and steam turbines, gas engines, all kinds of mining machinery, saw mill machinery, brick and bricketing machinery, sugar machinery and many other lines.

The Electrical Association.

The annual convention of the Canadian Electrical Association will be held in Hamilton on June 15, 16 and 17. A number of valuable and interesting papers will be read. A new departure in connection with these meetings is the opening of a question box. Advance copies of the questions have been issued and members are asked to contribute answers. In this way much valuable information will be brought out. While the members of the association are in Hamilton they will have an opportunity of visiting the Hamilton Electric Light and Contract Power Co.'s plant, as well as the new works of the Canadian Westinghouse Electric and Mfg. Co.

CONSERVATIVE ENGLAND.

IS it possible that some of the contemptuous criticism of English business methods commonly heard in Canada are but a proof of the limitations of our business scope ?

How frequently do we hear in this country the most sarcastic criticisms of the conservatism of English business men, of the tendency in England to follow the same methods, continue the same processes and even use the same labels on the packages year after year. decade after decade !

The interview with E. D. Storer, the English colorman, on another page, throws some interesting light on this subject. The trade of the great mercantile concerns of Great Britain is world-wide. It is their general experience that in most countries, and particularly in the populous countries of Asia, the people are so conservative that to hold their trade it is necessary to maintain a uniformity of quality and a similarity of package. The experience in India and China of Goodlass, Wall & Co., as related by Mr. Storer, should be read by all Canadians ever hoping to do business in Asiatic countries.

OVERHEAD WIRES.

Already some of the Canadian cities have been agitating for the placing in underground conduit of all overhead electric and telephone wires. The multiplicity of poles with their numerous cross arms, insulators and transformers, and network of wires detracts greatly from the beauty of any place. In small towns this is almost necessary, as the great cost of putting in underground cables renders it prohibitive on the part of the companies. In larger cities there is every argument in favor of putting the wires underground, and everything that pertains to the beauty and appearance of our cities demands such an action, to say nothing of the greater safety to life and limb ensured by the latter method. Montreal has qualms of conscience in the matter, and even got as far as having a bill in the Legislature dealing with it, but it seems to have ended there. In New York the matter was fought for years before anything was done, but finally public sentiment was so strong in the matter that the authorities had to take action. They did this and compelled the electric companies to place the wires underground. Whether anything will come of the move made by the Montreal authorities is not definitely known, but the sooner something tangible is done in the matter, the sooner will our Canadian cities get rid of the unsightly, not to mention dangerous, overhead construction.

PROTECT OUR OWN MANUFACTURERS.

In Montreal business circles some interest has attached during the week to the statement in an evening paper on Monday that the Government would be asked to rebate to the contractors the duties on all foreign materials used in the construction of the new steel sheds on the harbor front. Definite information on the subject is lacking, but the Manufacturers' Association have deemed it of sufficient importance for discussion at a meeting of the Montreal Executive on Thursday.

In well-informed circles it is not considered probable that the Government will allow the contractors a rebate of duties on materials which can be supplied by our own manufacturers. To do so would not be in accord with the policy pursued with reference to other public works. Public opinion does not favor the construction of Canadian public works from materials imported at slaughter prices. The same question has come up before in connection with the proposed Grand Trunk Pacific, and it has been made quite plain that Canadians as a whole desire the Government to give our own manufacturers a chance.

It is customary in such cases as the present for the Government to rebate the duties collected to the Harbor Commissioners, thus saving them any extra cost because of the tariff It has been argued from this that as the Government obtain no revenue from the import of these materials they should rebate direct to the contractors. But this would make every difference to the Canadian manufacturer, who would be deprived of all protection. The contractors have based their estimates upon the supposition that existing duties will be maintained and no injustice is done them by maintaining those duties. But it would be unjust to deprive the Canadian maufacturer of his own market. He is afforded this protection for small business; he should not be deprived of it when a large contract is in sight.

SILVERWARE A HARDWARE LINE.

Hardware merchants who have given due attention to silverware have ever found it a profitable line. Mackenzie, Milne & Co., Sarnia, Ont., in writing of the line, say : "We have for the last thirty years sold the best goods we can get at a reasonable price and on no occasion allow inferior goods to be sold. We sell silverware of a standard make, which we can stand behind ourselves, as well as the maker. In this way our customers get good value for their money and will always return." The consequence is that this firm are recognized by silverware manufacturers as among the most successful retailers of the line in the Dominion.

CANADA'S UNDERPAID JUDICIARY.

A STRIKING illustration of the manner in which public opinion has awakened during recent years to the wisdom of safeguarding the Supreme Court by greater liberality in the salaries attached thereto, is given in the opinion expressed by Sir Mackenzie Bowell a few days ago. Sir Mackenzie, in the course of conversation, strongly supported the policy of Hardware and Metal in advocating higher remuneration for Supreme Court judges. He said that at one time he was opposed to any higher salaries for judges. He felt that the position, like that of cabinet ministers, was one of such great honor that a man should be willing to accept smaller remuneration. During the last few years, however, he realized that owing to the greatly increased cost of living, and the greater earnings of leading lawyers, it was impossible to get the best men without paying them more money than at present. He strongly favored increased salaries for all judges, from the Supreme Court to the County Court Bench. He believed it would be good policy for the Government to begin with the Supreme Court immediately. Later, the salaries of the lower courts could and should be increased.

* * *

George Caverhill, of Caverhill, Learmont & Co., president of the Montreal Metal and Hardware Association, was seen by a representative of Hardware and Metal this week, with reference to the discussion in this paper of the inadequate salaries paid to the Canadian judiciary.

He said: "My answer to the much discussed question with regard to the meagre salaries paid to our Canadian judges, is made purely from a business standpoint. In the first place it is necessary that a judge should be free from all possibility of debt or worry, in taking and keeping that position in social and professional circles which it is absolutely necessary that he should occupy. No matter how able the judge may be, unless he is free from worries of this kind, his judgment although not biased is not apt to be given with the same clearness it otherwise would be.

"I am given to understand that the salaries now paid the judiciary are the same that were paid at the time of Confederation. At the same time in the larger cities, such as Montreal and Toronto, the cost of living has increased 300 per cent. At first blush, this may seem an extraordinary statement, but investigation shows it to be a positive fact. No man to-day can possibly educate his family and mingle with the ordinary well-to-do (not the extravagant) commercial and professional classes, on the salaries paid our judges, without being subject to much financial worry. It is idle to expect the best services, even from the most able judge, while this is the case.

"Again, the difference between the salaries paid to-day to the judges and the incomes of the leading legal men, is so great that it is absolute folly to expect an active legal man of the first rank in his profession to accept a position on the bench. The result is that we are inclined to regard a position on the bench as an appropriate gift to a man at the decline of a useful and honorable life. This is not right.

"A position on the bench should be given to a man in his prime, and the salary attached should therefore be sufficient to attract a man at the time when his earning powers in the legal profession are at their greatest. To induce an active lawyer of this class to accept such a position and to overcome the difficulties just mentioned it is necessary that the increase in salary should be a substantial one. An increase of a paltry two or three thousand dollars per year would be quite inadequate."

* * *

There is sound common sense in Mr. Caverhill's contention. If the Supreme Court judges were receiving salaries only two or three thousand dollars less than the incomes of the leading lawyers the prestige attached to a position on the bench might be expected to attract the ablest men in the profession. As a matter of fact and common knowledge, the incomes of active lawyers in the front rank of their profession are double and triple and quadruple the salaries of the Supreme Court judges. It follows, therefore, that the increase must be substantial if it is to attract our ablest lawyers. The prestige attaching to the position must always be an important factor, and hence it is not necessary that the present salaries should be made exactly equal to the largest incomes in the legal profession. But the point of the whole matter is that the increase must be substantial.

UNSALABLE STOCK.

Probably no question is more the object of anxiety and worry and none further away from a solution in the minds of the hardware and metal merchants than that of getting rid of unsalable stock. Every day he comes across it and every day the same question repeats itself, if not in definite form, at least in an unexpressed wish that the stock were off his hands. It generally ends in nothing being done, but still he hopes that he will get full value for it some time. The some time may or may not arrive, but in the meantime stock is there representing a certain value, which is more or less fictitious unless it can be turned into actual cash.

A recent number of Harness Gazette contains the suggestion which might be acted upon to advantage. The idea is to turn this stock into cash or its equivalent, though it be necessary to mark it down considerably. Instead of having a general sale, which would mean getting rid of good stock at less than its salable value, put all the unsalable goods in one place, or in a special room, and mark them down in price. Draw special attention to the fact, advertise them and it will probably be surprising how much would be turned over in this way that would otherwise be left lying on the shelves.

A CHILLIWACK MAN.

MR. J. H. ASHWELL, manager of Ashwell's department stores, Chilliwack, B. C., was in Toronto last week en route for the World's Faie at St. Louis. He is making his journey by easy stages. Before reaching the "Queen City" he spent four or five days in Winnipeg. Mr. Ashwell is one of the most progressive business men in the west, and although he works hard he believes that it pays in the long run for business men to take an occasional vacation as they not only gain in health but in experience.

Besides their store at Chilliwack the firm also have stores at Sardis and Rosedale, B. C. Their store at Chilliwack has recently undergone some improvements and has now a frontage of 93 feet and a depth of 50 feet. Their Chilliwack and Sardis stores are connected by a private telephone system 2½ miles long, and it has been found very convenient. The system is now being connected with every department at the firm's headquarters.

Mr. Ashwell, to use his own words, is a crank on system. He believes that a business man to be successful must be systematic and have his methods thoroughly up-to-date. He is always on the lookout for up-to-date methods and his system of bookkeeping is of the very latest design. He has recently introduced into business a card system for keeping stock. By this system the firm are able to tell every night just how their stock stands in the particular lines to which it applies and not only does the system enable them to ascertain this but also to check any mistakes which may have been made by a clerk in not entering goods which have been sent out to customers. At present the system only applies to the chief staple lines in the store, but Mr. Ashwell expects in time to have it so extended that it will include every line. He is so far very enthusiastic over the results obtained.

Speaking of business in his neighborhood during the past Winter he says it has been fairly good, although the weather had been more severe than usual. The outlook for the future he considers good.

"Seeding was well on the way when I left home," he said, "and the apple trees and cherry trees were in blossom."

Within the last year or two a couple of creameries have been started in the vicinity of Chilliwack, and Mr. Ashwell said that one of them last year made 176,000 lbs., which had netted the farmers an average price of 23c. The butter from these creameries retails in Chilliwack at 30c, and in Vancouver at 35c per lb.

"These creameries," said Mr. Ashwell, "have been a great benefit to us and have solved for us the problem of rank butter. Now nearly all the farmers take their milk to the creamery where it is made into good butter."

The Ashwell firm is one of the pioneers in that part of British Columbia, they having been in business for 33 years. The father of J. H. Ashwell was the founder of the business and he settled in Chilliwack about 40 years ago.

OFFICERS OF BUSINESS MEN'S LEAGUE.

THE annual meeting of the Montreal Business Men's League was held this week in the reading room of the board of trade, president Henry Miles presiding. After the adoption of the annual report the following officers were elected :

President—Henry Miles.
Vice-President—Charles Chaput.
Treasurer—J. C. Holden.
Executive Committee—Henry Miles, chairman; Charles Chaput, F. W. Evans, J. C. Holden and Alex. McFee.
Advisory Committee—Hon. L. Beaubien, E. H. Botterwell, W. D. Lighthall, Hon. J. D. Rolland, Geo. T. Bell, H. A. Price, T. L. Paton, Wm. Birks, George Hague, Robert Munro, C. S. J. Phillips, C. E. E. Ussher, A. Lalonde, Walter Paul and N. E. Hamilton.

H. S. HOWLAND, SONS & CO.

H. S. Howland, Sons & Co. have purchased one of the best warehouse sites in Toronto, a block of land 250 x 80 feet, immediately opposite the Union Station, where a warehouse, modern in every particular, will be erected In the meantime the firm have installed in Cowan Avenue Rink, Toronto, a stock embracing practically all their lines, and are in a position to accept all orders.

UNKEPT PROMISES.

IT is an old song that the insurance companies have been singing for years, "Improve your fire protection and we will lower our rates." Have they ever kept their promise ? Experience would indicate that they have done quite the opposite. Down in the Maritime Provinces one of the grievances of business men which is annually aired at the Board of Trade meeting is this breach of faith of the insurance companies.

If the insurance men fail to show their sympathy with improvements in fire protection, there is naturally less and less inducement to carry out reforms. This is an unfortunate state of affairs. Business men have always supported movements for the preservation and protection of property, but their efforts in this direction will assuredly be diminished unless the insurance men cooperate with them in earnest. Increased taxation for fire-fighting appliances and increased insurance rates should not go together.

AN OMISSION.

The Champion Manufacturing Co., 1,586 Notre Dame street, Montreal, have directed our attention to an unintentional but none the less unfortunate omission of their name from the classified list of advertisers in the Spring number of Hardware and Metal. This feature of the paper has been much appreciated by advertisers, and the mistake in this instance is no doubt an injury to this firm. The Champion Mfg. Co. are making the trade a very generous offer in order to introduce their razor strops. Hardware merchants looking for a snap should turn to this firm's advertisement of Page 131 of the Spring number, and write for the trial order described there.

WILL EQUIP ASYLUM KITCHEN.

The Western Foundry Co., Wingham, have secured the contract for equipping the kitchen of the new Asylum for the Insane at Penetang, Ont., for the Ontario Government. The order includes four-fire four-oven "Huron Chief" heavy steel plate French ranges, also urns, steam roasters, steam vegetable cookers, etc. This order is a testimony to the merit of "Huron Chief" ranges.

WHOLESALE SADDLERY HOUSE.

Geo. A. Rudd & Co., who formerly conducted a retail saddlery store on Yonge street, has moved into a new three-and-a-half storey building on King street west, in which a strictly wholesale saddlery business will be conducted.

WILL MAKE CASTINGS.

The St. Thomas Car Wheel Co., St. Thomas, Ont., start next week the construction of a new shop for turning out castings for the trade.

PERSONAL MENTION.

Mr. C. M. Rudel, of the Fairbanks Co., Montreal, was sufficiently recovered this week to return to business.

Mr. E. Donsley, of A. Ramsay & Son, Montreal, accompanied by his wife, left Montreal on Friday for a trip to Great Britain.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, May 13, 1904.

A GENERAL improvement in the activity in nearly every line handled by the hardware trade is reported, consequently there is a widespread manifestation of satisfaction by the trade.

Western shipments are now being made, both by lake and rail. The only trouble is that the first boats cannot begin to carry all first boat orders, consequently, as in preceding years, many shipments have to be left over for succeeding boats. Otherwise shipments are being made promptly, and compared with last year trade is every bit as good.

Many repeat orders and a brisk demand are reported in lawn mowers, garden hose, lawn sprinklers and hose reels, and in green wire cloth and poultry netting. Barb wire orders are still coming in from dealers who failed to have their orders filled by the independent company. The shortage in wire nails that was reported last week has been overtaken.

On the whole, prices remain the same, the only change noted being an advance in tinned roofing caps of 1-2c a pound. Payments are reported none too good, which is the natural result of the recent depressed state of business.

Washing Machines—No change in prices this week. The market is steady and quotations as follows: Round (three legs), $35.00 per dozen; round (four legs), $39.00 per dozen; square (regular size), $42.00 per dozen; square (smaller size), $36.00 per dozen; round rotary, $56.00 per dozen; square rotary, $59.00 per dozen; "New Century," $72.00 per dozen.

Lawn Mowers—A still increased demand and many repeat orders are noted. The fine weather is having a marked effect. Prices are steady. We quote as follows: With 8-inch wheel, sizes 12, 14 and 16 inch, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18 $4.75; 20, $5.25 each.

Garden Hose—Many orders are reported this week, and demand is exceedingly brisk. Discounts continue: Trade 75 per cent.; Western, 65 and 10 per cent.; White, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; cotton, 60 per cent.

Hose Reels—The effect of the Summer weather is also felt in this line. Prices are from 15 to 25 per cent. higher than last year.

Lawn Sprinklers—A big trade reported. Prices from $2.50 to $18.00 a dozen.

Ice Cream Freezers—There is a big demand for these goods at present. Orders are coming in fast, many of them repeat orders. We quote the following range of prices for the leading brands: One quart, $1.50 to $1.60 each; 2 quart, $1.70 to $1.80 each; 3 quart, $1.95 to $2.25 each; 4 quart, $2.35 to $2.60 each; 6 quart, $2.95 to $3.25 each; 8 quart, $3.70 to $4.10 each; 10 quart, $4.75 to $5.50 each; 12 quart, $5.75 to $6.50 each; 14 quart, $6.75 to $7.50 each.

Agricultural Wrenches—A steadily increasing demand. Discount as before, 25 per cent.

Harvest Tools—No change in this line. Discount is the same, 60 per cent.

Spring Hinges—Many orders booked this week. We quote: No. 5, $17.25 per gross; No. 10 $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Heavy Screw Hooks and Hinges—The demand still continues brisk, with prices the same as before. We still quote: Sizes 12 inches and upwards are selling at $3.25 per 100 lbs; the price of the 6, 8 and 10-inch sizes is $4.25.

Wire Hat and Coat Hooks—The market is steady. The price of 3-inch hooks is 75c a gross.

Churns—Prices continue the same with only a moderate trade. Discounts 40 and 15 per cent. f. o. b. Montreal and 30 and 30 per cent. f. o. b. factory.

Green Wire Cloth—There is an unusually good trade in this line, and many orders have been received this week. The price is $1.50 per 100 square feet.

Poultry Netting—A brisk market and a lively trade being done. Discounts for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-gauge, the discounts are 55 and 5 per cent.

Galvanized Poultry Netting Staples—There still continues a good trade. Prices are: Sizes 5-8, 3-4, 1 1-8, 10-lb. boxes, $12.50 list; 25 and 50-lb boxes, $12.25 list; 100-lb boxes, $12 list. Less 57 1-2 per cent.

Bed Staples—The discount on the Montreal Rolling Mills Company's and the B. Greening Wire Company's lists is 57 1-2 per cent. The discounts on the Dominion Wire Company's list are 25 and 2 1-2 per cent.

Blind Staples—No change, the discount, as before, is 40 per cent.

Galvanized Coil Spring Wire—Market is fairly active, with no change in prices. Our quotations are as follows: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Carlots 5 cents less. Freight prepaid is less than carlots to extent of 25 cents and in carlots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—A continued steady market. Trade a little better than last week. Prices are as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11 $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots 12 1-2c extra per 100 lbs will be charged.

Barb Wire—Dealers report that they are still receiving many orders from retailers whose previous orders had not been filled. We quote: $2.75 per 100 lbs. f. o. b. Montreal, and $2.50 f. o. b. Cleveland. Carlots of 15 tons $2.40 f. o. b. Cleveland.

Smooth Steel Wire—There is an active demand. No change in prices, which are: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb are now as follows: Coppered wire, 60c; tinned wire. $2; oiling, 10c; spring wire, $1.25; best steel wire, 75c; bright soft-drawn, 15c; hay-baling wire, 20 to 25c.

Annealed Hay Wire—No new feature in the market. Annealed hay wire and annealed and oiled wire have not changed in price. Same list with usual discounts.

Fine Steel Wire—Market continues steady. Discounts 25 per cent., with net extras as follows: 1 and 2-lb. hanks, 25c per 100-lbs.; 1-2-lb. hanks, 37 1-2c; 1-4-lb. hanks, 50c.

Brass Wire—Merely an ordinary trade in this line. Discount, as before, is 60 per cent.

Copper Wire—There is little business reported in copper wire this week. Discount 60 per cent.

Rivets and Burrs—A good trade reported, with no change in quoted prices. Discounts are: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb carton boxes are quoted at 60 and 10 per cent. off list.

Tinned Roofing Caps—An advance of 1-2c a pound is noted this week. A good demand.

Screws—The shortage in screws is not so great as was felt last week, but there is still a slight shortage. There is a lively demand, with no change in prices. We quote discounts as follows: Round head, bright, 82 1-2 per cent.; flat head,

bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Cut Nails—A fair demand, with prices the same as before, viz., $2.30 per keg f.o.b. Montreal, Toronto, Hamilton and St. John.

Wire Nails—There is a good demand for wire nails. The factories have now caught up in the sizes that they were short in last week, so that there is now an ample supply. Prices continue steady. We quote the following prices: $2.40 per keg carlots and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford and St. John.

Boxwood Rules—The discounts continue the same, ranging from 52 1-2 to 50 per cent. off list.

Shot Guns—The market has not picked up to any extent within the past week, and there is not much doing.

Cordage—A good demand, but no change in prices. We quote as follows: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; Russian tarred spunyarn, 13 1-2c; jute rope, 3-8-in in diameter and upwards, 9c; cotton rope, 21c; cotton twine, 24c for 3 and 4 ply. Cotton bedcord, 90c to $1.70, according to length. Sash cord 30 to 31 1-2c; cotton candle wick, 22 to 24c.

Building Paper—An active trade in all lines due to the increased building operations. We quote as follows: Tarred felt, $1.85 per 100 lbs; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry sheathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c per roll.

Firebricks—Not yet enough of them to supply the demand. English are selling at $16.00 to $22.00 per 1,000; Scotch, $17.00 to $22.00.

PLUMBING GOODS.

Practically all lines of plumbing goods are in good demand this week, and the supply houses report an active trade, not only with outside points, but also with the city plumbers. The local strike does not appear to have affected the supply business in the least. "In fact," said a supply man to Hardware and Metal, "if it were not for the newspapers we would not know that a strike exists. We are getting orders all the time from the city trade, and it is evident that the masters have secured new men. The journeymen were ill advised to ask so much." There has been a big rush since the opening of river and lake navigation, as for weeks previous orders had been accumulating for shipment with the first boats. The first boats were unable to take all the freight that offered.

Lead Pipe—Conditions are much the same as last week. The demand from country points is quite active and large. Supplies are going forward both by rail and by boat. The price is still 8c for composition waste and aqueduct and 7c for ordinary. The discount is 35 per cent, f. o. b. Montreal, Toronto, St. John, N. B., and Halifax. F.o.b. London—15c per 100 lbs extra. F.o.b. Hamilton—10c per 100 lbs extra.

Soil Pipe and Fittings—Business continues brisk this week. We quote: Light soil pipe, 3 to 6-in, 50 and 10 per cent.; medium and extra heavy soil pipe, 2 to 6-in. 60 per cent.; extra heavy soil pipe, 8-in, 45 per cent. Light fittings, 2 to 6-in, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in, 60 and 5 per cent.; extra heavy fittings 8-in, 45 per cent.

Iron Pipe and Fittings—The demand continues steady and prices are well maintained for ordinary business. Some concessions are obtainable for large lots. We quote: Standard pipe, per 100 feet, in length under 19 feet—black, 1-8-in, $2.30; 1-4-in, $2.30; 3-8-in, $2.55; 1-2-in, $2.85; 3-4-in, $3.65; 1-in, $5.20; 1 1-4-in, $7.35; 1 1-2-in, $8.95; 2-in, $12.55. Galvanized—1-4-in, $3.20; 3-8-in, $3.45; 1-2-in, $3.90; 3-4-in, $5; 1-in. $7.20; 1 1-4in, $10.05; 1 1-2-in, $12.20; 2-in, $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.; and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in, $4.20; 3-4-in, $5.25; 1-in, $7.55; 1 1-4-in, $10.55; 1 1-2-in, $12.75; 2-in, $17.60. Galvanized—1-2-in, $5.25; 3-4-in, $6.65; 1-in, $9.55; 1 1-4-in, $13.25; 1 1-2-in, $16; 2-in, $21.90. The discount on all sizes of extra heavy pipe is 12-12 per cent. Coupling, 1-2 in. to 2 in., 55 per cent. discount; nipples, 1-4 and 3-8 in., 65 per cent discount and 1-2 in. to 6 in. 67 1-2 per cent. discount.

Solder—We quote 18c for bar and 18 1-2c for wire solder.

METALS.

Most items under this heading show an increased strength this week, and the general tone of the market shows an improvement. Import orders are now arriving and some long delayed deliveries are being made. English advices report a strong market in Canada plates, black sheets, galvanized sheets, tin plates, etc., and local prices are firm in sympathy. As noted last week, one local house advanced their quotations 10c per box on Canada plates, and they have maintained this advance. The old figures are still quoted by the other houses, but it would not be surprising if a general advance were made very soon. In structural materials interest has centred this week on the big contract awarded to Peter Lyall & Sons for the erection of steel freight sheds on the harbor front. Steel in large quantities will be required for this work. The pig iron market is steady this week, but, as before, buying seems restricted to present requirements. To a great extent, Canadian iron is taking the place of the imported, and import business is not so large as in other seasons. Ingot copper continues very firm and a slight advance has been made in local quotations. Tin, on the other hand, has declined 1-2c, and pig lead, although weak, is quoted at the old figures. A feature of the local market for the last few weeks has been the scarcity of zinc spelter.

Pig Iron—Sales of Canadian iron show a substantial increase, but it is doubtful whether the imported iron is holding its own, as compared with other seasons. Deliveries are now being made by boat of iron ordered earlier in the season, and instructions in most cases are now caling for immediate delivery. As before, buying seems to be restricted to current requirements, buyers appearing to hesitate about placing large orders. In spite of the slight weakness which developed last week in the United States markets, the local iron market is apparently quite steady. The Dominion Iron and Steel Company advise Hardware and Metal as follows: "Prices of pig iron for the past week have been very steady. The volume of business has been fair, mostly made up of small lots. Consumption seems to be continuing at a rate at least equal to the previous week, as many customers are pressing for deliveries." We quote following prices:

"Disc," No. 1	$17.50	delivered	Montreal
"Dom.," No. 1	13.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18.00	delivered	Montreal
" No. 2	17.50	"	"
" No. 3	16.50	"	"
" No. 4	16.00	"	"
Londonderry	18.50 to 19.00	"	"
Summerlee	18 50	"	"
Glengarnock	20.25 to 20.75	"	"
Gartsherrie	20.00	"	"
Carnbroe	18.50	"	"
Carron No. 1	19.00	"	"
" (special)	17.50	"	"
Ayresome No. 1	17.50	"	"
" No. 3	16.90	"	"
Clarence No. 1	16.25	"	"
" No. 3	16 00	"	"

Bar Iron—In better supply this week, although the demand continues brisk. Prices are very firm and, as was stated last week, an advance is not unlikely, in view of the fact that local quotations are abnormally low. We quote: Merchants' bar, $1.75; horse shoe iron, $2; forged iron, $1.95.

Black Sheets—Primary markets continue very strong, and local quotations are firm in sympathy. We quote: 28-gauge, $2.35; 26-gauge, $2.30; 22 to 24-gauge, $2.25; 19 to 20-gauge, $2.20; 8 to 10-gauge, $2.35.

Steel—On the local market there has not been a particularly large volume of business this week. Interest has centred on the contract secured by Peter Lyall & Sons for the erection of steel freight sheds on the harbor front. This contract will call for an immense quantity of steel and structural material. The Dominion Iron and Steel Company advise Hardware and Metal as follows, from Sydney: "The consumption of steel billets seems to be improving; specifications received have been larger than those received for some weeks, and in all cases customers want prompt shipment. A number of large buyers have been endeavoring to purchase at prices slightly below the market, but have not

151 Hastings St. W., VANCOUVER, B.C., and LIVERPOOL, ENGLAND.

been successful, and will no dout before long be compelled to pay full market prices." We quote as follows: Sleighshoe, $1.90; tire, $1.95 to $2.10; spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—Several sales are reported this week, but none appear to have been for large quantities. We quote: Black Diamond, 8 to 9c; Sanderson's, 8 to 9c, according to the grade; Jessop's, 13c; Jonas & Colver's, 10 to 20c; "Air Hardening," 65c per lb; Conqueror, 7 1-4c.

Sheet Zinc—The remarks made last week still apply. Supplies are short and in consequence for immediately delivery local prices are exceedingly firm. On cask lots the price is $6.15 to $6.25 and for smaller quantities it is $6.50. As before stated, these prices are well maintained.

Galvanized Iron—There is an active business this week in both large and small orders. The primary markets are stronger and local quotations are maintained firmly. We quote 28-gauge, Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz., $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c extra.

Tinplates—English advices continue to indicate a rising market in Wales, and the feeling locally is that higher prices must soon be asked in Canada. Prices are, however, still as before. Cokes $3.75 and charcoals $4.

Terne Plates—Nothing new to report. Market firm; price $6.75.

Canada Plates—The market continues firm and fairly active. Quotations follow: 52s, $2.30; 60s, $2.35; 75s, $2.40; full polished, $3.60 and galvanized $4 to $4.10; galvanized 60s, $4.25 to $4.35.

Ingot Tin—The tin market is easier this week, and local quotations are now 31 1-2c to 32c, a decline of 1-2c.

Ingot Copper—Copper is firmer this week, and on the local market it is held now at 14c per lb. for quantities.

Pig Lead—The market is easier, but last week's figures still obtain. We quote $3.35 to $3.45.

Antimony—Cookson's is quoted at 7 3-4c to 8c.

Coil Chain—Quotations are: No. 6c, 10c; No. 5, 9c; No. 4, 8 1-2c; No. 3, 7c; 1-4-in, $6.10; 5-16-in, $4.70; 3-8-in, $4; 7-16-in, $3.80; 1-2-in, $3.70; 9-16-in, $3.55; 5-8-in, $3.35; 3-4-in, $3.30; 7-8-in, $3.25; and 1-in, $3.20 with 10c allowance on carlots.

Scrap Metals and Old Material—The scrap metal market is without any features of interest this week. Prices follow: Heavy copper and wire, 11 to 11 1-2c per lb; light copper, 10 1-2c; heavy red brass, 10 to 10 1-4c; heavy yellow brass, 8 1-2c; light brass, 5 1-2c; lead, 2 3-4c; zinc, 2 3-4 to 3c; iron, No. 1 wrought, $10 to $12; machinery scrap, $15 to $16; stove plate, $12; mixed country rags, 65 to 75c per 100 lbs; old rubbers, 5 1-2 to 6c per lb.

10 Front Street, East.
Toronto, May 13, 1904.

BUSINESS has at last reached a volume worthy of the season. In fact, orders are coming in which should have, if weather conditions had been favorable, been to hand weeks ago. In addition there is a good movement of lines generally called for about now. Altogether, the volume of trade is quite satisfactory. There is a good movement in all housecleaning lines, in washing machines, screen doors and windows, refrigerators, ice cream freezers—in fact, all Summer lines for the home or farm. The demand for building material and supplies is particularly active, while such lines as bolts, nuts, screws, etc., are being taken in large quantities by manufacturers.

Washing Machines—There is a good trade. The advance of $2 per dozen is maintained in both round and square washing machines. The quotations now are: Round, reacting washer, per doz., $56; square, reacting washer, per doz., $59; Eclipse, $48; Dowswell, $36; New Century, $72.

Oil Stove Wick—Prices are steady since the advance of about 10 per cent. last week.

Steel Track Door Hangers—Prices are steady since the reduction, with a fair trade doing. We quote as follows: Steel track, 1x3-16 inches, $3.75; 1 1-4x3-16 inches, $4.75. At least one house is, however, quoting as low as $3.50 for 1-inch hangers.

Chain—There is a good trade at steady prices. Prices are still as follows: 1-4-inch, $5.60; 5-16-inch, $4.45; 3-8-inch, $3.85; 7-16-inch, $3.70; 1-2-inch, $3.55; 9-16-inch, $3.45; 5-8-inch, $3.35; 3-4-inch, $3.25.

Step Ladders—There is a good demand for pine ladders on this market at 10c per foot for 3 to 6 feet, and 11c per foot for 7 to 10 feet ladders.

Lawn Mowers—Business in this line continues active, with prices fairly steady, as follows: Woodyatt, 10 1-2 inch wheel, $8.50; Star, 9 inch, $7; Daisy, 8 inch, $5.75; Philadelphia, 7 1-2 inch, $7; Ontario, 7 1-2 inch, $15.80; King Edward, 12 inch, $9.50 (14-inch cut in aboce). D. Maxwell & Sons, 10 1-2 inch, $7.50 to $10; 9 inch, $5.50 to $6.25; 8 inch, $4.90 to $5.50. Discount 50 per cent.

Screen Doors—The demand continues to expand. There is no change in prices which are as follows: Common, two or three panel, walnut, 4 inch, $6.50; yellow and green stained, $6.75; in natural colors oil finish, $8.75, with 20c less for 3-inch style.

Screen Wire Cloth—Orders are practically all in. Prices steady at $1.50 per 100 square feet.

Spring Hinges—An improved trade is reported with prices steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Barb Wire—There is a big movement. Our quotations are steady as fol-

lows, $2.75 per 100 lbs, f.o.b. Toronto and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $240 f.o.b. Cleveland.

Galvanized Wire—A fair trade is doing, prices are firm as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c per 100 lbs extra charged.

Coiled Spring Wire—An excellent demand continues. The market is steady. Our quotations are as follows: No. 9, $2.70 per 100 lbs, freights equalized with factory points at Montreal, Hamilton, London, Welland or Walkerville and allowance to other points up to 25c; carlots, $2.65, freight allowance to 20c.

Wire Nails—Orders coming in now generally include requests for wire nails. Prices are firm. Quotations are: $2.45 per keg f. o. b Toronto, with carlots $2.40.

Cut Nails—There is a fair trade, with prices steady at $2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—Business is somewhat better Price are firm, as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2, and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c less.

Horsenails—A good trade is recorded this week. Prices are steady. We still quote discounts as follows: "C" brand, 40, 10 and 7 1-2 per cent.; other brands 55 and 57 1-2 per cent.

Screws—There is a good trade doing. Prices are unchanged. We quote: Flat head bright, 87 1-2 per cent. discount; round head bright, 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—Business keeps active in all sizes. Prices are firm. We quote as follows: Iron rivets, 60 and 10 per cent. discounts; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—Manufacturers are calling for large quantities of bolts and nuts, and the bolt-makers are having trouble in keeping up with their requirements. We again quote: Carriage bolts, common ($1 list), 3-16 and 1-4-inch, 60 per cent.; 5-16 and 3-8-inch, 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—The quotations on binder twine for the season of 1904 are as fol-

"LONDON" HIGH-GRADE COILED SPRING WIRE

Has a perfect coil or spiral not a kink. It is made from a special wire containing a high percentage of carbon, which we get from the American Steel and Wire Co.'s Mills at Cleveland. This wire is not equalled by the product of any other concern either in tensile strength or in the galvanizing.

London Coiled Wire in No. 12 Gauge is at least 25 per cent. stronger than tha sold by our competitors. A test will prove the correctness of our assertion.

We have hundreds of tons in all sizes and kinds in stock, and can ship you 500 lbs. or five cars within 24 hours after receiving order.

If you want prompt shipment send us your orders for Coiled, Plain, Barb or Staples; also Steel Gates in all sizes.

LONDON BALLED WEAVING WIRE (in small balls)
Works like a charm. Just suits the farmers.

The London Fence Machine Co.,
LONDON, ONTARIO. CLEVELAND, OHIO.

lows: Sisal, 10 1-4c; standard, 10 1-4c; standard Manila (550 ft.), 11 1-4c; Manila (600 ft.), 12 1-4c; pure Manila (650 ft.), 13 1-4c. Five-ton lots 1-8c less. Carload lots 1-4c less. Compared with prices issued in March, 1903, these figures are a reduction of 1-4c on sisal and standard, and an advance of 1-4c on 600 feet and pure Manila, the price of standard and Manila remaining the same. The foregoing variations are said to be due to changes in the cost on the raw fibre. Prices on other lines are unchanged as follows: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; double shingleyarn, 11c; single shingleyarn, 10 1-2c; sashcord 'Hercules,' 32 to 35c; 'Star,' 36 to 38c; cotton rope, 3-16-inch and up, 20 1-2 to 22c; 5 32-inch, 25 to 27c; 1-8-inch, 25 to 28c; cotton twine, 3-ply 25 to 28c; 4-ply 32 to 34c; calking cotton, 16 1-2 to 17c; cotton waste, colored, 6 3-4c; white, 11 to 13c.

Building Paper—There is a very brisk demand for building paper, with firm prices, as quoted below: Tarred felt, $1.85 per 100 lbs; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry seathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c per roll.

Cement—There is nothing startling in the cement market this week. Enquiries still continue to come in thick and fast, and the prices are firm. We quote: Canadian Portland, $1.90 to $2.25; American Portland, $2 to $2.10 f. o. b. Toronto.

Firebrick—Firebricks are in good demand at the following prices: English and Scotch at 28 to 35c.

PLUMBING GOODS.

The activity continues to increase. Building operations are well under way, especially in the towns, and many orders are being booked. The only price feature is in iron pipe and fittings, in which there is keen rivalry for business, with the result that concessions are frequently made to large buyers. Brass goods are in excellent demand, as several good waterworks contracts are under way.

Lead Pipe—Prices are unchanged. We quote: Lead, 7c; lead waste pipe, 8c; discount 35 per cent.

Soil Pipe and Fittings—Prices remain unchanged, while there is a good amount of trade being done. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-inch pipe 40 and 5 per cent.

Iron Pipe Fittings—A brisk trade is being done, with considerable price-cutting. We quote nominally: Malleable fittings, 20 per cent.; cast iron (standard), 57 1-2 per cent.; headers, 52 1-2 per cent.; flanged unions, 60 per cent.; malleable bushings and plugs, 57 1-2 per cent.; nipples up to 6-inch inclusive, 67 1-2 per cent.

References Furnished. 470 Main St., Baker Block, WINNIPEG, MAN.

Copper Range Boilers—A fair, steady trade is being done since the new prices were issued. Discounts at 15 per cent. continue.

Iron Pipe—Prices are being cut by dealers, and a considerable amount of business is being done. We quote nominally f. o. b. Toronto: Black pipe, 1-8-inch, $3.05; 1-4-inch, $2.07; 3-8-inch, $2.25; 1-2-inch, $2.50; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.85; 2-inch, $11.05; 2 1-2-inch, $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25. Galvanized pipe, 1-4-inch, $2.88; 3-8-inch, $3.11; 1-2-inch, $3.42; 3-4-inch, $4.40; 1-inch, $6.35; 1 1-4-inch, $8.80; 1 1-2-inch, $10.75; 2-inch, $14.80.

Enameled Ware—There is an excellent sale of Canadian enameled ware. Prices are steady. We quote; "Standard" 5 1-2 feet rolled rim, first quality, at $21.60; second quality, $16.35.

METALS.

An appreciably stronger tone is manifest in the metal market this week. The depression last week as a result of a weaker market in the United States has not lasted, as the offerings of U. S. iron have in no wise increased. Ontario buyers are only taking iron to meet immediate requirements, and the bulk of the trade is being taken by Canadian producers. In bar iron there is a somewhat easier tone, as stocks here are large and competition is keen. In other lines there is no change, except in coke tinplates, which are lower. There is a big trade doing in sheet metals.

Pig Iron—While buyers are only taking such iron as they need, the Canadian furnaces are not disposed to make further concessions, the bulk of the business on this market going to the Midland, Hamilton and Nova Scotia furnaces. Prices are are follows:

Middlesboro, f.o.b., Toronto		$19 50
Hamilton, No. 1	$18 50 to	19 00
" No. 2	18 00 to	18 50
Midland, No. 1	18 50 to	19 00
" No. 2	18 00 to	18 50
" No. 1 f.o.b. Midland	17 00 to	17 50
Radnor, f.o.b. furnaces	....	30 00
Londonderry, f.o.b. furnaces	17 50 to	18 00

Bar Iron—There is a good trade doing, but as competition is keen prices are somewhat lower. We quote $1.75 f.o.b. Toronto, with discount of 2 per cent. For extras as cut to length while rolling, 2 feet and over, 10c per 100 lb; 1 foot and under 2 feet, 15c; under 1 foot, 20c; over 20 feet by special agreement according to length and size.

Steel—There is an improvement in all lines. Prices show no change, being as follows: Morton's high speed, 65c; Morton's tool steel, 14c; Jessop's high speed, 60c; Jessop's "Standard" tool, 14c; "Chas. Leonard," 8 to 9c; Jessop's best crucible sheet steel, 14c; Crucible Steel Co.'s "Black Diamond," 10 to 11c; "Silver," 13c; "Special," 17c; "Rex" high speed, 65 to 75c; "Self Hardening," 45 to 50c.

Black Sheets—The market is quiet, with prices firm.

Canada Plates—There is a stronger demand. No changes are reported in

prices. We quote as below: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—Outside markets are steadier. A good demand is noted. Quotations locally are firm but unchanged at 30 to 30 1-2c.

Galvanized sheets—An improvement in the demand for this line is recorded. Quotations are as follows: Queen's Head, $4.25 for 28 gauge; American, $4 for 28 gauge; Bell brand, $4.25 for 28 guage; Gordon Crown, $4.25 for 28 gauge.

Tinplates—Prices of coke plates are lower, an excellent trade doing. We quote: Coke plates, bright, 14x20, $3.10; charcoal plates, $4.25.

Copper—A fair business in both ingot and sheet. Prices are steady. We quote; Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—There is no change. We quote $3.30 per 100 lbs for pig lead and $3.65 for bar lead.

Zinc Spelter—A fair demand at 6 to 6 1-2c per lb.

Zinc Sheets—Stocks light. We quote: Cask lots, $6.70 to $7, and part casks $7 to $7.25.

Solder—Good trade doing. Prices are unchanged. We quote: Guaranteed half-and-half at 18c, and wiping 17c.

Antimony—8c per lb.

PETROLEUM.

There is no special feature in the market this week. Trade continues to be brisk at the following quotations: Canadian prime white, 19c; Canadian water white, 20 1-2c; American prime white, 19 1-2c; American water white, 31 1-2c; ex-warehouse.

Trade Enquiries

HARDWARE AND METAL will be pleased at any time to open its columns for trade enquiries relating to the hardware, metal, machinery or paint trades. Address enquiries to the Toronto Editor.

Canadian Agent Wanted.

A LONDON, Eng., firm manufacturing horse-clipping and sheep-shearing machines, the merit of which is unquestioned, would like to secure a Canadian agent. A saddlery hardware firm or a manufacturers' agent would be preferred. Full information will be supplied on application to the editor Hardware and Metal, Toronto or Montreal.

Prices on Cuts Wanted.

Stephenson & Co., Red Deer, N. W. T., write: "Where can I secure reliable cuts of stoves, churns and other hardware specialties for newspaper advertising?"

Note.—As several hardware retailers are in the habit of using these cuts we presume they could give the answer desired. Such a courtesy would be greatly appreciated.—Editor Hardware and Metal.

Gas Well Casing.

C. O. Read & Son, Hagersville, Ont., write: "Would you kindly give us names of firms manufacturing gas well casing, either in Canada or the United States."

Note.—The Bridgeport Brass Co., Bridgeport, N. Y.; the United States Steel Products Co., Pittsburg, Pa., and the Oil Well Supply Co., Pittsburg, Pa., are suggested.—Editor Hardware and Metal.

Government Enquiries.

The names of the firms making these enquiries, together with their addresses, may be obtained from the Department of Trade and Commerce, Ottawa, by quoting office under which the enquiry appears and giving number.

54. A Belgian industrial agency desires to enter into correspondence with Canadian firms with a view to representing them in Belgium and the north of France. They also offer their services to Canadian houses purchasing glass of various kinds and building material.

55. A manufacturing firm using large quantities of box-boards are seeking supplies from Canadian sources.

56. A West of England house make inquiry respecting supplies of wooden bungs for barrels, wood disks to cover mineral water bottle corks and wood boxes in the knock-down condition.

Architect Darrach, St. Thomas, is receiving tenders for two brick buildings for the St. Thomas Gas and Electric Light Co., one 35x90 feet and the other 35x65 feet. The buildings are rendered necessary owing to the extensions and improvements to be made to the plant.

BUSINESS CONDITIONS IN BRITISH COLUMBIA.

From the Special Correspondent of HARDWARE AND METAL

Vancouver, B. C., May 7, 1904.

LUMBERMEN in British Columbia have raised a very warm debate (in which they have the sympathy of the business community) over the conditions of the lumber industry, and the unfair competition to which it is subjected by reason of importations from the U. S., while Canadian lumber is not permitted to enter the United States without paying a minimum duty of $2 per thousand.

Last week the B. C. Mills Timber & Trading Co., Limited, one of the largest concerns operating in lumber in the province, announced its intention of closing down the Hastings mill in this city. This is the largest of the four mills owned by the company. They have a second mill, the Royal City, in Vancouver, the Royal City Mill in New Westminster, and the Moodyville Mill across the inlet from Vancouver. This latter has been closed down for nearly two years.

The Hastings mill has been principally engaged in the export cargo trade, and is in fact the only mill on the mainland of B. C. at the present moment in that trade. The Chemainus mill on Vancouver Island, not far from Nanaimo, is also exporting, but no other mills are in the trade except in lots by steamer. Mr. C. M. Beecher, of the Hastings mill, in discussing the conditions which handicapped the export trade, said it was a losing business to ship cargoes at prices now prevailing; for the export mills on Puget Sound and down the coast of Washington and Oregon were involved in a price war which made it hopeless to maintain trade.

The Vancouver Board of Trade at its monthly meeting took the matter and a number of millmen present expressed their views on the situation. Mr. E. H. Heaps said the only way to relieve the present strain upon the industry was to place a duty on lumber imported from the U. S. The U. S. manufacturers had larger markets and could stand competition better than this country, which had virtually its home market and nothing more. Freight rates and other conditions were in favor of the U. S. lumbermen. British Columbia was not on a fair footing with the U. S. even in the home market of the Canadian Northwest, which it has a right to consider its own.

Mr. J. G. Scott, of the Pacific Coast Lumber Co., Mr. Beecher and others, expressed themselves on similar lines, it being pointed out that the new Assessment Act bore heavily on the lumber industry.

At a later meeting of the council of the Board of Trade a resolution endorsing the claims of the lumbermen was adopted, and boards of trade and other bodies throughout the province were asked to support the movement to impress on the Dominion Government the necessity of imposing a duty on lumber from the U. S. The resolution reads:

"To prevent the closing of our lumber mills and consequent stagnation affecting the general business of British Columbia, the Vancouver Board of Trade urges the Dominion Government to immediately impose duties on U. S. lumber equivalent to those against Canadian lumber entering the U. S."

The Boards of Trade of Toronto and Montreal, and the Canadian Manufacturers' Association were also wired asking their support. The Victoria Board of Trade has adopted resolutions similar to those passed by the Vancouver board.

* * *

Following the agitation commenced by the millmen, the loggers are very much disturbed over the possibilities of the lumbering being paralyzed by a general close-down of the big mills. They have been considering the situation and have decided that they will urge the suspension of the export prohibition in case the home market is closed. They can sell their logs, especially cedar, on the Sound, where the Washington millmen are glad to get it.

* * *

The industries of Vancouver have been increased this year in several ways. One of the most important is the establishment of factories for the manufacture of wooden stave pipe. Two factories have been opened. One of these, the Pacific Coast Pipe Co., Limited, has erected very complete buildings on a large scale and has equipped them with excellent and complete machinery for every process of the making of the pipe.

Wooden stave pipe for water mains is beginning to come into greater demand every day. Not only for municipal waterworks but for waterpower and for mining work the pipe is found to be very suitable. It is made from fir, the staves being shaped in an ordinary sticker as used in a planing mill. A groove and tongue of peculiar shape give the necessary tightness to the joints in the staves. After being loosely shaped together the lengths of pipe are put into a wiring machine, where under great tension double galvanized steel wire is wrapped round the pipe from end to end. According to the size of the pipe and to whether it is to be used for high or low water pressure, the thickness of the wire varies, and the closeness with which the wire is coiled is also governed by the same requirement. The exterior of the pipe is treated with a coating of tar and asphaltum. The joints are either made of a section of pipe, fitting over the shaped ends like a sleeve or with a cast iron coupling which the company has patented. As many towns in the Northwest are beginning to put in waterworks systems, the field for the sale of this sort of pipe is almost unlimited.

* * *

The manufacture of cast iron sewer pipe is to be undertaken by the firm of Wharton & Gray, of the Ideal Foundry, of Vancouver. Heretofore the cast iron pipe used for sewer connections has been imported from England and from the U. S. To bring it to uniformity and increase the strength of the pipe, the city has amended the sewer by-law to make it necessary to use "Standard" pipe in all cases. This will enable the local firm to go into the business of casting these pipes. The amendment does not go into effect until July 1.

* * *

Respecting the contract for vitrified sewer pipe to be used in the $150,000 extensions to the city sewers, your correspondent was misinformed as to the source of supply of the pipe. It has formerly very often been imported from the Old Country, but the successful tenderers in this case were not quoting Old Country pipe. The pipe will be furnished by the B. C. Pottery Co., of Victoria, an institution which manufactures a very large quantity of excellent pipe.

* * *

The City of Vancouver has in hand the construction of at least ten or twelve miles of cement sidewalks this season and, as it has been the custom to use cinders for the foundation layer, owing to the need for good drainage, it is with some concern that the City Works Department finds that no supply of soft coal cinders can be obtained. Formerly the cinders were got at the power house of the B. C. Electric Railway, but the use of water power is shutting down the steam plant and no more cinders can be got. The city engineer, Col. Tracy, has just returned from Ladysmith, Vancouver Island, where he examined the quality of the slag turned out from the smelter there, with a view to using it as a substitute. He says it is all right for the purpose. The suitability of the material for cinder paths is also to be the subject of a test. The slag can be loaded on scows very cheaply as the smelter is on the waterfront at Ladysmith and a chute can be run from the smelter direct to the loading scow. The towage and hire of scows would be the chief item of cost.

* * *

There is a movement on foot to reorganize the Albion Iron Works Co., which has foundries and shops in Victoria and Vancouver. The proposal took rise in the desire of the management to increase the capital to strengthen the company. It was intended to issue $100,000 more stock, to be taken up largely by the present shareholders. Some of these have objected, and action is being taken in the courts to prevent the proposal being carried out. The objecting shareholders are asking for a winding-up order and the liquidation of the company.

* * *

Hereafter the customs offices here and in Victoria will keep no diary of monthly importations as formerly. This change was introduced by Inspector McMichael on his recent visit. The idea is to do away with duplicating the work which has been done at Ottawa all along. It will be done there in future and the reports sent forward from here and Victoria.

* * *

The most powerful light on the coast of North America is being erected at a new light house on the west coast of Vancouver Island at Clayoquot. D. G. S. Quadra is at present away on a voyage with materials and men to erect the new light house. The light will be 150 feet above sea level. It was ordered from Chace Bros., the well-known makers of lights.

* * *

The White Pass & Yukon Railway Co. have issued a new tariff giving cost of transportation to the new Alsek diggings. Mendenhall Landing, 70 miles from White Horse, is the head of navigation going into the new fields. The passenger rates are $10 from White

Horse, freight in any quantity 75c per 100 lbs., horses and cattle $7.50 per head, canoes $5 each, and dogs $2 each.

* * *

Reports from the new diggings are somewhat meagre at the present moment because of the interruption to traffic until after the waterways open. All indications are, however, that the results will be very satisfactory when actual results are obtainable. One man who has been washing out with hand rocker on Bullion Creek has been averaging $1 to the pan, which is considered very rich gravel.

* * *

Building operations are extremely active, the weather being very warm and advanced. The remarkable movement in real estate, especially in inside business property, still continues. There has perhaps been greater activity this Spring than in any one of the past five years, good as the record has been for them.

PITTSBURG METAL MARKET.

From The Iron Trade Review, May 12, 1904.

THE railroads, which earlier in the year were blamed for the depression in the iron and steel trade, are now doing a good part of the limited amount of buying, and much of the tonnage that will reach the mills in the near future will be for railroad work. The largest and only important inquiry for pig iron in the market to-day has been made by the Wheeling Mold & Foundry Co., of Wheeling, W. Va., for upwards of 30,000 tons of iron for delivery during eighteen months beginning July 1, this iron to be used in filling the contract awarded this concern for 32,000 tons of New York tunnel castings for the Pennsylvania railroad. Southern furnaces, as well as those in Mahoning and Shenango Valleys, are bidding, and the indications are that the iron will be placed at exceedingly low prices, despite the fact that furnacemen are averse to selling iron so far ahead. Southern furnaces are making a strong effort for the business, but the probabilities are that a Valley stack will secure the order.

Several local contractors bid on the erection of the new steel sheds for the Montreal, Canada, wharves, but the contract was awarded a Canadian concern. It is probable, however, that the structural work will come to this country and that the contract calling for 20,000 tons of steel will be sublet to one of the structural steel concerns in this district. There is also a possibility of this steel being purchased in Germany, but this is not probable, as the mills in this country are so keen for tonnage that a price below that any German manufacturer can make will be named.

Pig Iron—On pig iron only a nominal market exists in this district. Sales of a few small lots of iron have been made during the week, but not sufficient inquiries are out to invite competition and place the market on a basis looked for under an open ore market. In addition many furnaces anxious to protect contracts are not quoting prices at which they expect business, in view of the small tonnage which is being offered. On No. 2 foundry $12.50 Valley furnace is being quoted, although as high as $13.50 Pittsburg is asked. On Bessemer iron the last sales were made on the basis of $13 at the furnace, but $12.75 could be readily done for immediate delivery and for forward shipment there would be no trouble in doing $12.50 at the furnace. Southern furnaces are holding No. 2 at $9.75 Birmingham, but cannot take business at this price in competition with northern furnaces. The majority of the merchant furnaces in the Valleys have cleaned up all their orders and are now merely waiting for something to turn up. That the demand for early iron will improve sufficiently during the next two weeks to insure the future operation of the stacks is not anticipated, and a pretty general shutting down of Valley stacks is looked for about June 1. We revise quotations as follows:

Bessemer, Valley	$12 75	to	$13 00
Bessemer, Pittsburg	13 60	to	13 85
No. 1 Foundry	13 75	to	14 00
No. 2 Foundry	13 35	to	13 60
Gray forge, Pittsburg	12 75	to	13 00
Chilled basic, Valley	12 50	to	12 75
Chilled basic, Pittsburg	13 35	to	13 60

Steel—Both Bessemer and open-hearth billets are now being offered in this market at $22.50 delivered, while sheet bars can be had at $23. Billets at Cleveland are being offered at $22.25. The leading steel mills are maintaining pool quotations, but are not taking any business. We quote association prices as follows: Bessemer and open-hearth billets, 4x4 inches, and slabs, up to and including 0.25 carbon, $23 Pittsburg, Wheeling, Valley, Johnstown, Ashland, Ky.; Ironton, O., and Lorain, O., 0.26 and including 0.60 carbon, $1 advance; and 0.61 to 1.00 carbon, $2 advance. Billets smaller than 3 7-8 inches and sheets and tin bars are $1 per ton extra. Bessemer and open-hearth rods are still quoted at $30 to $31 Pittsburg.

Bars—Specifications on bars have fallen off to some extent, while new business is very light. Iron bars are now held at 1.35c, Pittsburg, while for western shipment 1.25c to 1.30c is the basis for some mills instead of 1.35c, the price established some time ago. On steel bars prices are being firmly maintained. We revise quotations as follows: Bar iron, 1.35c to 1.40c Pittsburg, for local delivery, while for western shipment quotations are based on 1.25c to 1.30c Pittsburg. Hoops are held at 1.40c base, and bands at 1.35c taking bar extras. Bessemer steel bars, 1.35c; open-hearth, 1.40c; plow beams and cultivator beams, 1.35c net; channels, angles, zees and tees, Bessemer, under 3 inches, 1.45c. The following differentials are maintained on steel: Less than 2,000 pounds of a size and not less than 1,000 pounds, 10 cents advance; less than 1,000 pounds of a size, 30 cents advance.

Wire and Wire Nails—The amount of new business that is being placed is light, the mills all operating on orders for the Spring trade. The customary lull in the trade during the Summer months accounts for the light buying at this time. Quotations remain unchanged as follows: Wire nails, carload lots to jobbers, f. o. b. cars Pittsburg, are quoted $1.90 base; plain wire, carload lots, $1.80 base; barb wire, carload lots, $2.20 base; staples, carload lots, $2.05 keg. Galvanized, 30 cents extra. Carload lots to retailers are held at 5 cents advance in all lines, and on less than carload lots a further advance of 10 cents is charged. Steel and iron cut nails, carload lots, $1.75, and less than carload lots, $1.80 f. o. b. Pittsburg, plus freight to points of destination. Terms, 60 days, less 2 per cent. off in 10 days.

Merchant Steel—New business is light and output at nearly all the mills in this district is being curtailed. We quote as follows: Toe calk, 1.90c; carriage spring steel, 1.75c; tire steel, 1.65c; plow steel, 6 inches and under, 1.40c for Bessemer and 1.45c for open-hearth; plow slabs, 1-4 inch and heavier, 1.65c. The demand for shafting on the part of the machinery manufacturers is not heavy, and tonnage has therefore been considerably affected. Drawn, ground and cold rolled shafting is held at 52 per cent. off in carload lots and 47 off in less than carloads.

Pipes and Tubes—Demand for merchant pipe has improved materially this month, while the tonnage in line pipe is extremely heavy. The pipe trade is in excellent condition.

Coke—The coke market is lower, due largely to the large output of the region. A number of coke producers are shipping into this district on consignment, and these lots are of course being sacrificed. On furnace coke the prevailing quotations range from $1.45 to $1.50, while on foundry coke $1.95 to $2 is being freely done. A few special grades of coke, however, command as high as $2.50. During the week ending Saturday, April 30, the production of the upper Connellsville region reached 211,487 tons, while that of the lower region was 55,478 tons, showing a slight increase over the output of the previous week.

LONDON METAL MARKET.

From The Metal Market Report May 11.

Tin—Spot tin opened firm at £125, futures £124, and after sales of 300 tons of spot and 230 tons of futures closed firm at £125 7s 6d for spot and £124 for futures.

Copper—Spot copper opened quiet at £57 12s 6d, futures £57 12s 6d, and after sales of 400 tons of spot and 100 tons of futures, closed quiet at £57 10s for spot and £57 11s 3d for futures.

Lead—The market closed at £11 17s 6d.

Spelter—The market closed at £22 5s.

Iron—Scotch warrants, Glasgow, closed at £52. Middlesboro No. 3 foundry, at £44 4s 1-2d.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

BUSINESS FOR SALE.

HARDWARE BUSINESS—About $4,000, in largest mining town in New Ontario. For particulars address Horne & Hardy, Copper Cliff. (24)

HARDWARE store and tinsmithing business; about $2,000; in town of Frankford; for particulars address John Lewis & Co., Belleville, Ont. (20)

IMMEDIATELY — Second-hand planer and matcher; iron frame; able to dress 12-in. thick; must be in first.class repair and cheap; give full particulars. Hamilton Bros., Glen Huron, Ont.

PLUMBING, tinsmithing and hardware business, established 1892. Everything must be sold at once. J. D. Murdoch & Co., Simcoe, Ont. (20)

HARDWARE BUSINESS WANTED.

IN large, first-class town or city. Will pay cash. Address Box 132 HARDWARE AND METAL, Toronto. (20)

AGENCY WANTED.

AN established Manufacturers' Agent in Montreal representing several large American houses, with representatives covering all Canadian territory, wishes to secure a good Canadian manufacturer's line in Hardware or Specialties. Address Box 102, HARDWARE AND METAL, Montreal. (20)

CANADIAN manufacturers desirous of being well represented in B.C., the Yukon and Alberta and open to exploit the oriental markets are invited to communicate. We know the territory. Have you the goods? HARDWARE, Box 367, Vancouver. (21)

SITUATIONS WANTED.

YOUNG man of good character wishes to learn hardware business. Address A. E. Hoar, Box 186 Bowmanville, Ont. (20)

You Lost That Job—

perhaps. The man wanted awnings for his residence, and you said you couldn't supply them.

We want to work with you to get orders. Write us for circular.

HARDWARE CONDITIONS IN MANITOBA.

Office of HARDWARE AND METAL
Room 308 McIntyre Block,
Winnipeg, May 11, 1904.

FOR the past week business has been good and jobbers report trade in the city as being quite satisfactory, but throughout the country things are a little quiet. There are yet a number of farmers throughout Western Canada that are still waiting for their watery farms to resume.

* * *

The excavation for the new Miller & Morse wholesale hardware warehouse is now well under way, and they are now about to commence on the masonry work for the foundation.

* * *

The C. P. R. have awarded the contract for the Main street subway at Winnipeg to Deeks & Deeks, contractors at Montreal, who now have an office in Winnipeg.

* * *

David Philip, manufacturer's agent, is now located in the Baker Block, at 470 Main street, having found the accommodation in his former quarters at 185 Lombard rather inadequate to his requirements.

* * *

The market practically remains the same, with little or no change of any note. We quote:

Barbed wire, 100 lb.	$3 15

AN EXCELLENT REPORT.

Without exception, the 1903 report of the Board of Trade of Toronto is the best ever published by that institution This excellence is largely due to the illustrated description of the city, placed at the beginning of the report. Excellent pictures of the striking features of the city, together with condensed descriptive matter, make up an admirable introduction to the reports and membership lists which follow. President J. F. Ellis' annual address takes up ten pages, and contains considerable valuable information. There follow the secretary's, treasurer's and section reports, the book being completed with a list of the members.

PAINT, OIL AND BRUSH TRADES

White Lead Prices in Canada.

A TORONTO jobber is quoted in Canadian Hardware as saying: "It is absolutely ridiculous that white lead prices should be at their present level in Canada. Do you know that prices are more than two cents higher in Detroit than they are in Windsor? Why? Just because the United States manufacturers have sense enough to maintain prices at a basis suitable to them all."

The same paper quotes Canadian prices of white lead as follows: Ground white lead, Government standard, $4.50; No. 1, $4.25; No. 2, $4; No. 3, $3.67 1-2; No. 4, $3.30. Dry white lead, $4.25 in casks and $4.50 in kegs, etc., etc. These are the open prices, but it is known that Canadian paint grinders have been offered all the white lead they want at 3 1-4c delivered, and American brokers in pigments are unable to sell them because of this low competitive price. It is possible for Canadians to send their pig lead to this country and have it corroded here, in bond, and returned to them, paying freight both ways, and yet the cost of the corroded lead is under that of American white lead shipped into Canada. That is one of the peculiarities of lead production and tariff barriers that is well worthy the study of the paint and allied trades.—Paint, Oil and Drug Reporter.

Linseed Oil Prices.

LINSEED oil is attracting much attention throughout the world. The primary cause is an unusually heavy flax crop in the Argentine Republic, one of the three great sources of supply on which British crushers depend. The crop last season was nearly double a normal one, with the consequence that the English market was flooded with seed and prices were pressed downward to a point that had not been reached for years.

During the last couple of days prices have advanced somewhat in England, but the quotations there are still so low that Canadian crushers have been compelled to make material reductions to meet the quotations on the imported oil.

At the moment the market, despite recent reductions, is none too strong.

P. D. Dods & Co.

P. D. Dods & Co., whose Toronto warehouse was destroyed in the recent fire, have been somewhat inconvenienced as a result. J. H. Morin, manager of business in Ontario, has, however, taken every precaution to prevent this inconvenience being felt by any of their customers. They have opened an office at room 1, 23 Scott street, and though not able to secure a warehouse in Toronto are equalizing matters by paying freights to Toronto from their Montreal warehouse, in which a full stock of goods is carried. "You can say," said Mr. Morin to Hardware and Metal, "that our business is going on as before, and we are as busy as ever."

Linseed Oil in England.

The records for the month of April have been a history of dwindling prices in linseed oil, and the fact that the influence of Spring trade was not sufficient to check this downward tendency seems to indicate a greater inherent weakness than might have been anticipated. It is true that there is not a great deal of margin for a continuous fall; a very confirmed pessimist can scarcely expect to see linseed oil go much below £11 per ton, and we have already witnessed the acceptance of £12 5s in Hull. * * * The supplies of linseed coming into the country this year are such as to make it evident that any chance of a rise in prices can come only from a rapid increase in consumption; and there are reasons for believing that any such rapid increase is extremely improbable, if not altogether out of the question, during the present year.—Oil and Colourman's Journal.

REKA OCHRE

Ground in Refined Linseed Oil. . .

For fineness of texture and strength of tinting qualities, it is in a class by itself.

A rich chromy shade for less price than ordinary yellow ochre will cost you.

It is one of our rapid sellers and will be the same with you. Mailing sample free on application.

PAINT

GOOD FOR VESSELS

The paint that *is* weather and waterproof *must* be a superior paint—honest to the core. Such is **"ARK"** Brand.

What the unprejudiced user says :

Hamilton, Dec. 12th.

Messrs. The Francis-Frost Co., Limited, Toronto.

Gentlemen,—We purchased some of your "ARK" Brand Paint from Mr. Thos. Ramsay, hardware merchant, of this city, and used it to paint our steamer "Myles." The captain was very much pleased with it, and stated it gave him better satisfaction than the pure white lead and linseed oil that we had been using for years. We tried a much-advertised mixed paint of another make the previous year, but it proved a failure.

Yours truly, THOS. MYLES & SONS.

We have gained more new customers this season than ever before. Are you one of them ? If not, write for our proposition.

Paint and Oil Markets

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, May 13, 1904.

NO change in staple lines has occurred since last week. Both linseed oil and turpentine are stronger in primary markets, and as a result local prices are firmer. No actual change has been made and the range of prices in linseed oil quoted in last issue still obtains. Business has improved with the fine weather and manufacturers are now very busy. We quote:

Ground White Lead—Best brands, Government standard, $4.50; No. 1 $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead—$4.25 in casks, and in kegs $4.50.

Dry White Zinc—Pure dry, in casks, 6 1-4c; in 100-lb kegs, 6 3-4c; No. 1, zinc, in casks, 5 1-4c; in 100-lb kegs, 5 3-4c.

White Zinc—(ground in oil)—Pure, 25-lb irons, 8c; No. 1, 7c; No. 2, 6c.

Putty—Bulk, in barrels, $1.50; in 25-lb tins and irons, $1.80; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7c; 100-lb kegs, 7 1-4c; smaller quantities, 8 1-4c.

Red Leads—Genuine red lead, in casks, $4.25; in 100-lb kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks, $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge—Ground, casks, 5c; in less quantities, 5 1-2c; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Turpentine—Single barrels, 84 1-2c to 85c per gallon; 2 to 4 barrels, 83 1-2 to 84c per gallon. Standard gallons of 8.6 pounds. The difference in quotations is due to different terms of payment.

Linseed Oil—Raw, 1 to 4 barrels, 43 to 45c; 5 to 9 barrels, 42 to 44c; boiled, 1 to 4 barrels, 46 to 48c; 5 to 9 barrels, 45c to 47c. Delivered in Ontario between Montreal and Oshawa at 2c per gallon advance.

Shellac Varnish—Pure white, $2.85 to $3.50; pure orange, $2.75 to $3.40; No. 1 orange shellac, $2.45 to $2.60.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil—8 3-4 to 9 1-4c in wholesale lots, and 1-2c additional for small lots.

Ontario.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, May 14, 1904

THE continuance of favorable weather has given an impetus to the paint and oil trade which is doing much to make up for the dullness of previous weeks. All lines are going out freely, a particularly good movement of prepared paints, varnishes, dry colors, Paris green, etc., being reported. The chief interest regarding prices centres in linseed oil and turpentines. Linseed oil has reached its lowest point for years in England, and although prices have advanced about 2c in the last few days, the quotations there are materially lower than those ruling here, with the consequence that prices have been materially reduced. Turpentine quotations have been advanced 2c during the week, there being very little offering here. The market is not very firm, however. White lead is steady. Paris green is rather firm. Varnishes are decidedly firm, owing to an advance in gums.

White Lead—Ex-Toronto, pure white lead, $4.65; No. 1, $4.20; No. 2, $3.90; No. 3, $3.50; No. 4, $3.25 in packages of 25 lb and upwards; 1-2c per lb extra will be charged for 12 1-2-lb packages; genuine dry white lead, in casks, $4.50.

Red Lead—Genuine in casks of 560 lb, $4.25; ditto, in kegs of 100 lb, $4.50; No. 1, in casks of 560 lb, $3.75 to $4; ditto, in kegs of 100 lb, $4.25.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c per gallon.

Paris White—90c to $1 per 100 lb.

Whiting—60 to 65c per 100 lb; Gilders' whiting, 75c.

Shellac—Pure orange, in barrels, $2.50 to $3; white, $2.50 per gallon; No. 1, $2.37 1-2, including price of can.

Linseed Oil—Raw, 1 to 4 bbls, 43c; boiled, 46c; 5 to 9 bbls, raw, 42c; boiled, 45c, Toronto, Hamilton, London and Guelph. Advance of 2c for delivery to outside points. One firm is quoting raw, 1 to 4 bbls, 42c; boiled, 45c; 5 to 9 bbls, raw, 43c; boiled, 46c; 10

HENDERSON & POTTS, LIMITED, HALIFAX, N.S.

Statement Relative to Canadian Act in Restraint of Fraudulent Marking.

This Act prohibits the use of the terms PURE or GENUINE for White Lead in Oil, unless the article's composition is as required by the Canadian Government. At the present time it is appropriate for us to make the following declaration: "All White Lead Paint sold by us as PURE or GENUINE is, and always has been, chemically pure and as required by Law. If this statement can be refuted by any purchaser of our PURE or GENUINE White Lead Paint, we hereby agree to refund the full amount of such purchase, bear expense of the analysis, and forfeit the goods."

Castor Oil—English, in cases, 7 1-2 to 8c per pound, and 8 1-2 to 9c for single tins.

English Paris Green — Petroleum bbls, 13 1-4c; arsenic kegs, 13 1-2c; 50 to 100-lb drums, 14c; 1-lb packages.

Canadian Paris Green (present delivery)—Petroleum bbls, 13 1-4c; arsenic kegs, 13 1-2c; 50 and 100-lb drums, 14c; 1-2-lb tins, 18c.

St. John, N.B.

In burning oil prices are unchanged and seem quite firm. A large tank steamer arrived this week. In lubricating oils dealers are busy. Prices are held firm. Paint oils have a large movement, while there is no change in linseeds, the market being weak. Turpentine holds firm.

Window Glass.

MONTREAL.

Prices locally are unchanged. We quote: First break, 50 feet, $1.70; second break, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

There is a particularly good trade in window glass done throughout the Province. City trade is improving, and is expected to reach a large volume this season. Prices are nominally as follows: Star, first break at $3.80 per 100 feet and Double Diamond first break, at $5.10. Discount, 15 per cent.

WIRE HOOPS FOR BARRELS.

THE B. Greening Wire Co., Ltd., of Hamilton, Ontario, report that there is a steady growing demand for the wire barrel hoop, in place of the old-fashioned elm hoop. The coopers find such a difficulty now in getting material suitable for the wooden hoops; not only has the price advanced to an enormous extent, but it is practically impossible to get enough stock of suitable quality to supply the larger cooperage shops. The consequence is that in trying to use inferior stock there is a very serious loss of time and annoyance both to the cooper and shipper. The wire barrel hoop consists of a piece of 9, 10, 11 or 12-gauge steel wire, with the ends twisted together. The B. Greening Wire Co., Limited, claim their hoops are now made in a perfect circle, thus enabling them to slip down over the barrel into their place without binding at any particular point. The price is as low or lower than the wooden hoop. The wire hoops are now successfully used on flour, sugar, salt and apple barrels, and are coming into use on barrels for general merchandise. We would advise any of our readers interested in this who have not already tried the wire hoop to communicate with the B. Greening Wire Co., Limited.

REMARKABLE RAILWAY BRIDGE.

A remarkable bridge is now being built by an English firm over the Zambesi River. It is to be a part of that great scheme—the Cape to Cairo Railway—the masterpiece of the creative mind of the late Cecil Rhodes; and is being pushed forward as rapidly as the difficulties entailed by the circumstances will permit. It will cross the river at a point only a few hundred yards below the celebrated Victoria Falls, of which passengers by the railway will obtain an unparalleled view. The bridge, which will carry two lines of railway, has one span 600 ft. in length, the height of the bridge above the water level being 400 ft. No staging will be used on account of the great height, but catch nets will be used to insure the safety of the men engaged upon the hazardous work of erection. It will be built from each side on the cantilever principle. A transporter capable of dealing with loads up to ten tons will be used for construction. The total weight of the steel work will be 1,600 tons.

Look Out!

Action of Air on Sheet Zinc.

A STUDY of the action of the atmosphere on zinc, recently read before the Chemical Society in London by G. T. Moody, is abstracted as follows by Science: Strips of thin zinc were exposed for five months to the action of the atmosphere, with the result that the metal became completely covered with a half crystaline coating of a basic carbonate. From this it appears that the corrosion is to be ascribed, not to a direct oxidation, but to the action of the atmospheric carbonic acid. A confirmation of this was found in the fact that zinc dissolved in a saturated solution of carbon dioxide, the acid carbonate of zinc being formed, and on spontaneous evaporation a precipitate of basic carbonate was formed, of the same composition as that occasioned by atmospheric corrosion. While commercial hydrogen peroxide has a very rapid action on zinc, converting it into the hydroxide, pure hydrogen peroxide even of 30 per cent. strength is entirely without action, and the same is true regarding iron. Lead, on the other hand, is rapidly acted on by the reagent, being converted superficially into lead peroxide. Thus the action of the atmosphere on lead may be due to the presence of hydrogen peroxide, but this cannot be the case with the corrosion of zinc and iron. That zinc is less corroded in the atmosphere than iron is attributed by Mr. Moody to the fact that so much of the carbonic acid is retained by the zinc in the form of basic carbonate, while in iron the carbonic acid is set free as soon as it has done its work, and thus keeps on in its attack upon the iron.

Aluminum Letters and Figures.

ALUMINUM, says a writer in the Tradesman of Chattanooga, Tenn., is coming into use more and more, for letters and figures as its good qualities are known. For street door plates, numbers on houses and show window lettering aluminum letters and figures are superseding painted and gilded characters, as they are light, durable and cheap. They can be fastened to metal, stone, wood, brick or almost anything else that is found in common use. As they are very light, they are less liable to crack or peel off than the heavier brass ones are, and if accidentally broken they may be easily replaced, having become a standard article of trade. In machine shops, cotton mills, and all other places where machines are numbered for convenience in designating them and keeping records of their performance, aluminum figures are useful and convenient.

The price of this material is much less than formerly, and as the supply is increased its value is sure to be less, thus making its use practical where it was considered out of the question a few years ago. Judged by the price per pound it is still high, but when we consider that a piece of aluminum of given size weighs only one-third as much as a piece of steel of the same size, the apparent difference is modified.

Good steel castings have a tensile strength of 70,000 pounds per square inch of sectional area, but a bar of aluminum of the same weight, containing 3 square inches of sectional area, will hold 78,000 pounds, therefore for a given weight the latter is the stronger.

GERMANY'S FOREIGN TRADE.

The German Trade Review publishes the German official statistics of hardware and metal exports and imports of that country in 1902 and 1903 (in quintals of 100 kilos), as follows:

	Imports.		Exports.	
	1902.	1903.	1902.	1903.

give great satisfaction and are justly entitled to their popularity.

Our **BROAD-HOOP BOTTOM** has all the advantages of a Seamless Bottom without the strain that spinning entails.

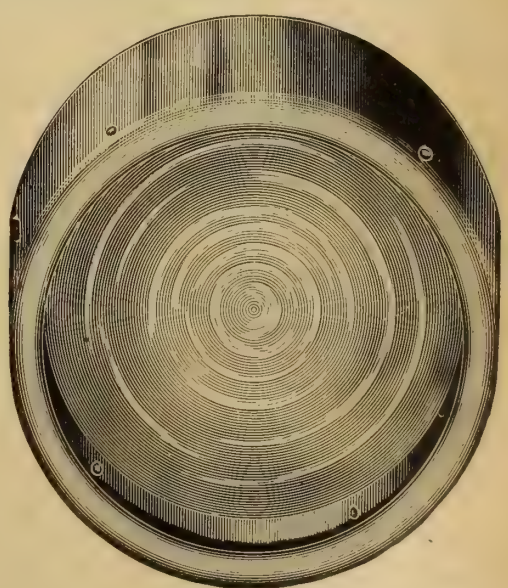
BOTTOMS can be sweated in with very little solder.

BOTTOMS are concave, draining to the centre, and are therefore easy to wash out and will not corrode.

Top bands are shouldered and all bands have retinned edges.

PATENT FLUSH SIDE HANDLES.

WE CAN SUPPLY BEST QUALITY TINNED IRON AT LOWEST MARKET PRICES.



Heavy Rolled Edges make our PATENT BOTTOMS doubly durable and waggon and factory floor protectors.

The THOS. DAVIDSON MFG. CO. Limited. ...MONTREAL.

HEATING AND PLUMBING

STRIKE SITUATION UNCHANGED.

WHILE the strike situation at Montreal remains unchanged, the master plumbers are becoming every day more and more confident of ultimate victory. The Journeymen Plumbers' Union are holding meetings continually in St. Joseph's Hall, which are well attended, and there seems to be little evidence of a desire to discontinue the struggle. They claim that a good many of the master plumbers have signed their "fair" list, agreeing to see that the workmen get fair play.

"We don't know that there is a strike," is what one of the prominent master plumbers said to a representative of Hardware and Metal, and that seems to be the general feeling amongst the members of the Master Plumbers' Association. Moreover, they hold that not a single member of their association who agreed to support the resolution drawn up by them to withstand the demands of the men has departed from his agreement. Any who have come to terms with the union are men who never joined in with the resolution made by the Master Plumbers' Association six months ago. They are holding meetings every morning at eleven o'clock in Contractors' Hall, to discuss matters. They all have all the men they want at present for regular work and some of them have more than they need.

In an interview the president said: "Public sentiment is with us, and people are willing to hold back work until matters are adjusted. We cannot think of giving the men an eight-hour day and at the same time raising their pay forty per cent., as they demand. It is impossible. As it is now with a nine-hour day, we count on the men losing a half hour in getting to work in the morning and the same amount of time in washing up before six in the evening, so that they are really only working eight hours as it is, and if they get their demands they would be working but seven. We are more determined than ever not to give in to the men, and as far as the strike is concerned we are not feeling it very much. If any of our men have rush work on the others are ready to help him out."

The master plumbers have received still more of the Old Country men to fill the places of the strikers, and from all present indications there seems to be no immediate chance of any settlement taking place.

——

Toronto Plumbers' Officers.

On Monday evening the Toronto Master Plumbers' Association held their annual meeting, which proved to be the most enthusiastic and encouraging meeting the association have held. The reports of all the officers showed a strong membership, and a flourishing treasury.

The feature of the meeting was the presentation to Robert Ross, who for the last two-and-a-half years has occupied the presidential chair, and under whose presidency the membership has twice doubled and the influence of the organization increased in like proportion. When Vice-President Cooper, after a brief speech, laid the offering of the members, a cabinet of sterling silver, on the president's table, as an expression of the good-will of the membership, the applause was tumultuous. It was needed, however, as the event was such a surprise to President Ross that he was unable to reply for several minutes. When he managed to utter his acknowledgments, however, he evoked another outburst of enthusiasm.

The officers were elected for the ensuing year as follows:

President—Robert Ross.
1st Vice-President—Geo. H. Cooper.
2nd Vice-President—R. T. Robinson.
Sergt. at Arms—W. J. Mason.
Executive Board—W. Mansell, F. Armstrong, J. J. McKittrick, R. Harrison, P. Hayes.
Secretary-Treasurer—W. H. Meredith.
Auditors—C. H. Beavis, W. G. D. Adams, C. Wallis.

——

The National Convention.

The Toronto Association has had under consideration this week the preliminary arrangements for the National Master Plumbers' Convention, to be held in Toronto on Wednesday, Thursday and Friday, July 20, 21 and 22. No details regarding the convention are yet arranged.

——

No Strike in Toronto.

At a conference between committees representing the Toronto Master Plumbers' Association and the Journeymen Plumbers' Union, an agreement was reached which will prevent the possibility of a strike in Toronto. A slight increase in wages will be made.

——

Owen Sound Plumbers.

A local association, to be affiliated with the Ontario Plumbers' Association, was organized on Saturday at Owen Sound, Ont., by Secretary Meredith and R. Harrison, representing the Provincial Association. The officers elected were:

President—D. M. Butchart.
Vice-President—Allan J. Ross.
Secretary-Treasurer—Hy. Christie.

We are being undersold by American machine-made goods which do not compare with our **Lathe-cut** Threads, Solid Heads and heavy Bell Bottoms.

Our screws will carry 50% heavier loads.

Do not go past us.

THE H. R. IVES CO., MONTREAL

LIMITED.

All our Imperial Oxford advertisements contain this sentence,

"If your dealer doesn't handle the

Imperial Oxford Range

write to us for particulars."

When they write to us we tell them where the nearest dealer is. From the number of enquiries we are getting, we know the advertising is selling quite a lot of ranges, but we don't believe it is selling as many as the kind words said by Imperial Oxford users.

Why don't you sell the Imperial Oxford Range?

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

THE old Workman mansion, standing on the McGill grounds, and which has been empty for several years, is about to be put to good use by the authorities of that university. They have decided to make it the home of the new Conservatory of Music, lately established at the college. Workmen are now engaged remodelling the interior and fitting it up in modern style.

Brantford, Ont., has denied to the Bell Telephone Co. a renewal of their five-year franchise.

Orillia, Ont., will restore its power plant at Ragged Falls, by boring a large tunnel in granite rock 1,500 feet long, and by extensions to the plant.

The S. & L. Railway is to be extended from Morief Junction to Glace Bay, N. S. The Dominion Coal Co.'s new mine at the latter place is being rapidly opened.

The Woodstock Automobile Co., who recently started operations, are now employing twenty-five hands, and have a modern plant. Their first "auto." was shipped to Hamilton last week.

The International Portland Co., Ottawa, have installed heavy rotaries, grinders and crushers, and have just awarded contracts for the lighter machinery, such as leather belting, rubber belt conveyers, trippers, electric fans and electric motors for the cable ways, the bulk of the orders going to Canadian firms.

COMPANIES INCORPORATED.

The Quebec Steam Whaling Co., Montreal; capital $295,000; purpose, to equip boats and carry on operations as whalers and sealers in Gulf and River St. Lawrence.

The East Grey Telephone Co., Limited, Markdale; capital $7,000; purpose, to carry on within the County of Grey the business of a telephone company; directors: Christopher Knott, James R. Fawcett, John Williams Ford, Walter Turner and William James Shorthill, all of the County of Grey.

O'Briens, Limited, Toronto; capital $60,000; purpose, to carry on the business of dry goods merchants and ladies' and gentlemen's tailors; directors: Daniel O'Brien, Gideon Grant, Stewart Gordon and Margaret O'Brien, all of Toronto; and Peter P. O'Brien and Marie E. O'Brien, of Ottawa.

Toronto Casket Co., Limited, Toronto; capital $100,000; purpose, to manufacture, buy, sell and deal in caskets, coffins, hearses, wagons, carriages, embalming instruments, fluids and disinfectants, etc.; directors; Joseph A. McCracken, Robert A. McCracken, Henry Cooper, Robert Cooper and Mabel G. McCracken, all of Toronto.

The Simco Tanning and Fur Dressing Co., Limited, Simcoe; capital $40,000; purpose, to manufacture, buy, sell, tan and deal in hides, skins, furs and all kinds of leather; directors: Albert Shaver, of Delhi; John Jago, David A. Bowlby and William P. Innes, of Simcoe, and William H. Brennan, of Gloversville, N. Y.

The Montreal and Boston Consolidated Mining and Smelting Co., Limited, Toronto; capital $7,500,000; purpose, to carry on a mining and smelting business and deal in lumber, stone, coal, coke, copper, oil, etc.; directors: Henry J. Wright, Joseph A. Thompson, John Payne, Richard Credicott and William J. Gilchrist, all of Toronto.

The British American Development Co., Limited, Toronto; capital $1,000,000; purpose, to carry on a mining, milling, reduction and development business; directors: Jas. E. Haines, of Brampton; Alfred T. Haines, of Cheltenham; Adam Lindsay, Jas. Carter and William J. Armstrong, of Guelph, and John W. Cheeseworth, of Toronto.

——

A BIG CONTRACT.

THE big contract for the erection of the proposed new steel sheds on the Montreal harbor front was awarded on Monday to Peter Lyall & Sons. Their tender of $2,305,000 for the shed contract was the lowest and, subject to the approval of the governor-general-in-council, the harbor commissioners have awarded the contract to this firm.

The contract was keenly competed for and much interest attached to the decision of the commissioners. In all eight tenders were received, the firms bidding for the work being as follows: Peter Lyall & Sons, general contractors, Montreal; Canada Foundry Co., Toronto; the Tidewater Bridge Co., New York; McClintic Marshall Construction Co., New York; J. Haney, general contractor, Toronto; Canadian Bridge Co., of Peterborough; W. Davis & Sons, general contractors, Ottawa; Milliken Bros., steel workers, of New York.

Twelve sheds each of two-storeys and built of steel throughout are to be erected, and if, as is expected, a good portion of the material is obtained from Canadian manufacturers, the contract is of great importance to several Canadian industries. The highest tender for the work was $2,694,000, the difference be-

"SHIELD BRAND" SHEATHING

When your customers ask for pipe covering sell them

"REMANIT"

the greatest non-conductor of heat of any pipe covering made.

This is only one of the superior points about **"REMANIT"**—it's not only the best non-conductor of heat but it does not deteriorate in use, fits both pipe and fitting, is easy to put on and is moisture proof. We shall be glad to send you more specific details about **"REMANIT"** and have a very attractive proposition to make to hardware dealers handling this superior pipe covering exclusively.

"REMANIT" is but one of our specialties from which hardware dealers can make a fine profit.

THE JAMES MORRISON BRASS MANUFACTURING CO., LIMITED

TORONTO, ONT.

tween the highest and lowest tenders being, therefore, $389,000.

No award was made for the elevated roadways and approaches, the lowest tender being $259,000, and the highest $330,000. It was originally intended that the two contracts should not be separated and hence no action was taken as regards the smaller contract. The harbor commissioners are obliged to go back to the Government for the necessary authority to spend a large amount, as they had estimated that $2,368,000 would have been sufficient for both sheds and roadways. In the meantime the matter of the roadways is in abeyance.

MICA ROOFING.

THE Hamilton Mica Roofing Co., ers of a patent mica roofing Hamilton, Ont., are manufactur- which seems destined to attract much attention from the trade. They invite attention to this roofing for cheapness, durability and ease of application for dwellings, stores, factories, barns, stables, and outhouses—steep and flat roofs. "It is," they state, "waterproof and fire-proof. A heavy roof is not needed for the greater number of buildings, a light roof answers every purpose and offers many advantages. It does away with girders, braces and numerous other contrivances necessary to sustain a heavy one. These neither increase the looks or convenience of the building, but do increase the cost. This extra cost may be saved or used to more advantage in other parts of the building. The ease of laying is of advantage both to the builder and owner. To the builder, because he can quickly enclose the building, an advantage which is of the greatest importance in a variable climate. To the owner, because he will be certain to put a similar roof upon any of his other buildings that may need it, and so secure a desirable and economical roof.

"It is put up in rolls or squares of 108 feet, including nails, tin buttons and paint. Any person with ordinary intelligence can lay from five to ten squares per day. If treated with proper care, it will last as long as the building stands."

STEEL WORK ON G. N. R.

S. R. H. Robinson has received the contract for laying rails and building bridges for the Canadian Northern from its present terminus, at mile 308, to Edmonton, a total distance of 519 miles. The work is to be done as rapidly as the grading can be prepared. A. J. Keith has the sub-contract for the bridge work.

A NEW BUILDING PAPER FACTORY

The Paterson Manufacturing Co., of Toronto and Montreal, have recently purchased a desirable building site in the latter city upon which they will erect immediately a new factory for the manufacture of their building papers, roofing felts and "Wire Edged Ready Roofing." The above factory will, the company state, be the largest of its kind in Canada and, in addition to being equipped with the most modern machinery, will have a private railway siding for receiving and shipping goods.

WANTED—A SLEEPING PARTNER

We are ready to take into temporary partnership with us a local hardware dealer: His investment to consist of "tips" and influence. Any hardware dealer who can tell us of a job in his neighborhood in which Structural Steel will be used, is asked to correspond with us. We have a word to say to him.

U. M. C. NEW PRODUCTS.

The .32 Automatic Colt Pistol Cartridge is loaded with a special high power smokeless powder, giving high velocity and operating free hrough the mechanism of the Automatic Colt Pistol (pocket model). Those with the soft point bullet will be found desirable for sporting pur poses, and those with metal case for military and target use.

RIM FIRE CARTRIDGES

The U. M. C. .22 automatic rifle (Winchester model 1903) cartridge is now ready for the market. New .22 short ungreased, 22 long ungreased, and .22 Winchester inside lubricated are inexpensive rim fire cartridges loaded with the best grade of smokeless powder. Boys a r calling for these cartridges, as they can be carried loose in the pocket without the old inconvenience of the greased cartridge. They will not lead he gun. "U. M. C. Ammunition shoots well in any gun."

IRONSIDE FOR IRON

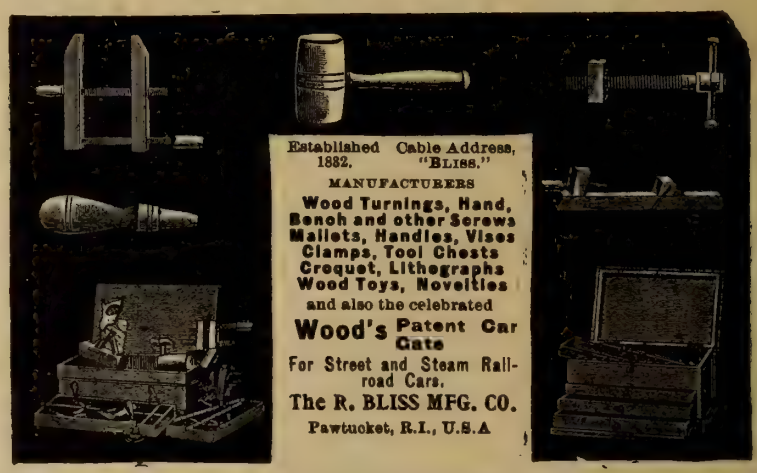
OUR SPECIALTIES ARE BRITISH AND FOREIGN **IRON, STEEL, METALS, BARS, PLATES, SHEETS, BOLTS and NUTS, TIN PLATES, Etc.**

Sole Licencees for **PAGE'S PATENT WIRE STRETCHER,** and we are willing to sell the right of manufacture in Canada on a Royalty basis.

IRONSIDE'S PATENT WIRE CUTTERS, guaranteed to cut any wire

We publish a "Canadian Metal Price List" monthly. Quotations in Dollars and Cents. (C.I.F.) We will send this, and our "Weekly Market Report" on receipt of address.

IRONSIDE, SON & CO., 16 Water Lane Gt. Tower St., E. C **LONDON, ENG.**



75 YEARS *ESTABLISHED 1825.* *75 YEARS*

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

SADLER & HAWORTH

LEATHER BELTING

"Crown Brand" Perfect Leather Fillet.

Our Fillet can be easily and quickly applied on single and compound curves, and on straight work, with a single operation.

It is much cheaper than Wood Fillet, and does better work.
